Safety Instructions

Before using the product ...

For your safety and effective operation, please read the safety instructions thoroughly before using the product.

- ▶ Safety Instructions should always be observed in order to prevent accident or risk by using the product properly and safely.
- ▶ Precaution measures can be categorized as “Warning” and “Caution”, and each of the meanings is as follows.

Warning

This symbol indicates the possibility of serious injury or death if some applicable instruction is violated

Caution

This symbol indicates the possibility of severe or slight injury, and damages in products if some applicable instruction is violated

Moreover, even classified events under its caution category may develop into serious accidents depending on situations. Therefore we strongly advise users to observe all precautions in a proper way just like warnings.

- ▶ The marks displayed on the product and in the user's manual have the following meanings.

Be careful! Danger may be expected.

Be careful! Electric shock may occur.

After reading this user's manual, it should be stored in a place that is visible to product users.

Safety Instructions

Safety Instructions for design process

Warning

- ▶ **Please install a protection circuit on the exterior of PLC so that the whole system may operate safely regardless of failures from external power or PLC.** Any abnormal output or operation from PLC may cause serious problems to safety in whole system.
 - Install protection units on the exterior of PLC like an interlock circuit that deals with opposite operations such as emergency stop, protection circuit, and forward/reverse rotation or install an interlock circuit that deals with high/low limit under its position controls.
 - If any system error (watch-dog timer error, module installation error, etc.) is detected during CPU operation in PLC, all output signals are designed to be turned off and stopped for safety. However, there are cases when output signals remain active due to device failures in Relay and TR which can't be detected. Thus, you are recommended to install an addition circuit to monitor the output status for those critical outputs which may cause significant problems.
- ▶ **Never overload more than rated current of output module nor allow to have a short circuit.** Over current for a long period time may cause a fire .
- ▶ **Never let the external power of the output circuit to be on earlier than PLC power**, which may cause accidents from abnormal output or operation.
- ▶ **Please install interlock circuits in the sequence program for safe operations in the system when exchange data with PLC or modify operation modes using a computer or other external equipments**
Read specific instructions thoroughly when conducting control operations with PLC.

Safety Instructions

Safety Instructions for design process

Caution

- ▶ **I/O signal or communication line shall be wired at least 100mm away from a high-voltage cable or power line.** Fail to follow this instruction may cause malfunctions from noise

Safety Instructions on installation process

Caution

- ▶ **Use PLC only in the environment specified in PLC manual or general standard of data sheet.** If not, electric shock, fire, abnormal operation of the product may be caused.
- ▶ **Before install or remove the module, be sure PLC power is off.** If not, electric shock or damage on the product may be caused.
- ▶ **Be sure that every module is securely attached after adding a module or an extension connector.** If the product is installed loosely or incorrectly, abnormal operation, error or dropping may be caused. In addition, contact failures under poor cable installation will be causing malfunctions as well.
- ▶ **Be sure that screws get tighten securely under vibrating environments.** Fail to do so will put the product under direct vibrations which will cause electric shock, fire and abnormal operation.
- ▶ **Do not come in contact with conducting parts in each module,** which may cause electric shock, malfunctions or abnormal operation.

Safety Instructions

Safety Instructions for wiring process

Warning

- ▶ **Prior to wiring works, make sure that every power is turned off.** If not, electric shock or damage on the product may be caused.
- ▶ **After wiring process is done, make sure that terminal covers are installed properly before its use.** Fail to install the cover may cause electric shocks.

Caution

- ▶ **Check rated voltages and terminal arrangements in each product prior to its wiring process.** Applying incorrect voltages other than rated voltages and misarrangement among terminals may cause fire or malfunctions.
- ▶ **Secure terminal screws tightly applying with specified torque.** If the screws get loose, short circuit, fire or abnormal operation may be caused. Securing screws too tightly will cause damages to the module or malfunctions, short circuit, and dropping.
- *
 - ▶ **Be sure to earth to the ground using Class 3 wires for FG terminals which is exclusively used for PLC.** If the terminals not grounded correctly, abnormal operation or electric shock may be caused.
 - ▶ **Don't let any foreign materials such as wiring waste inside the module while wiring,** which may cause fire, damage on the product or abnormal operation.
 - ▶ **Make sure that pressed terminals get tighten following the specified torque.** External connector type shall be pressed or soldered using proper equipments.

Safety Instructions

Safety Instructions for test-operation and maintenance

Warning

- ▶ **Don't touch the terminal when powered.** Electric shock or abnormal operation may occur.
- ▶ **Prior to cleaning or tightening the terminal screws, let all the external power off including PLC power.** If not, electric shock or abnormal operation may occur.
- ▶ **Don't let the battery recharged, disassembled, heated, short or soldered.** Heat, explosion or ignition may cause injuries or fire.

Caution

- ▶ **Do not make modifications or disassemble each module.** Fire, electric shock or abnormal operation may occur.
- ▶ **Prior to installing or disassembling the module, let all the external power off including PLC power.** If not, electric shock or abnormal operation may occur.
- ▶ **Keep any wireless equipment such as walkie-talkie or cell phones at least 30cm away from PLC.** If not, abnormal operation may be caused.
- ▶ **When making a modification on programs or using run to modify functions under PLC operations, read and comprehend all contents in the manual fully.** Mismanagement will cause damages to products and accidents.
- ▶ **Avoid any physical impact to the battery and prevent it from dropping as well.** Damages to battery may cause leakage from its fluid. When battery was dropped or exposed under strong impact, never reuse the battery again. Moreover skilled workers are needed when exchanging batteries.

Safety Instructions

Safety Instructions for waste disposal

Caution

- ▶ **Product or battery waste shall be processed as industrial waste.**
The waste may discharge toxic materials or explode itself.

Revision History

| Version | Date | Remark | Page |
|---------|--------|--|------------------------|
| V1.0 | '05.03 | First edition | - |
| V1.1 | '05.05 | Function description added | A-17 |
| V1.2 | '05.07 | O/S version up description added (V1.0 → V1.1) 1) Data latch/clear function added 2) SyCon master setting changed “Handshake of the process data” setting No consistence, uncontrolled → Buffered, host controlled | 5-14, 6-6 7-3, 7-18 |
| V1.3 | '05.11 | Revision of content | |
| V1.4 | '06.06 | Added Extendable Smart I/O Dnet I/F adapter. | 1-5, 7-16 ~ 7-28 |

Chapter 1 Introduction

1.1 What is DeviceNet?

DeviceNet was developed in response to the request for replacing expensive analog 4~20mA standard with a single digital standard, which is used as a communication link to connect various industrial devices of limit switch, photo-electronic sensor, motor controller, inverter, bar code reader and panel display to the network.

CAN (Controller Area Network) developed by BOSCH was set to substitute low-priced network cable for expensive Wire Harness of automobiles for the European automobile market. It is composed of Physical Layer and Data Link Layer only. As of now, it is proposed as ISO 11898 and 11591-1 standards. Since CAN application fields require services that are beyond the basic function specified in the data link layer, research on Application Layer has been ongoing. The key results are CAL (CAN Application Layer), SDS(Smart Distributed System), DeviceNet and CAN Kingdom certified by CiA (CAN in Automation).

DeviceNet is an Application Layer developed by Rockwell/Allen-Bradley, widely used in the present industrial automation field. These compatibility characteristics are similar to other network systems. However there are few network systems that guarantee their compatibilities. It is because there is no test to check compatibility with other company's products and due to high costs for this kind of test. Thus ODVA (Open DeviceNet Vendor Association), which supports all the services of Device Net, has solved these problems through research institutes of universities and technical research institutes in USA, Japan and UK. Since DeviceNet uses CAN communication protocol, low-priced CAN micro chip applied will reduce the cost. And direct connection of master and respective devices with the network of device level is available, improving communication quality between devices. In addition, flexible counteractions against errors are also available by access to important diagnosis information of device level which was impossible to use via the I/O interface. Its application range is extended to complicated and highly-developed services (High-speed data communication between controllers, synchronization of lots of devices performing super High-speed scan, etc.).

1.2 Characteristics of the Module

DeviceNet (hereinafter referred to as Dnet) I/F module have features as follows;

- ▶ 1 master module can control 63 slave modules with the max. 28,000 points of I/O control available.
- ▶ Multi-drop and T-diverged connection is available allowing the system to be extended and changed easily with flexible system operation function provided.
- ▶ Open network available to connect with other company's various slave modules.
- ▶ Master and slave can be set through Configuration Tool (SyCon), and communication control is available through XG-PD.
- ▶ Automatic setting, in other words, Auto scan is available for the modules (which exist) in the network.
- ▶ Configuration Tool (SyCon)
 - 1) Station number (MAC ID) can be specified (0 ~ 63) through Configuration Tool (SyCon).
 - 2) Communication speed can be specified (125/250/500 kbps) through Configuration Tool (SyCon).
 - 3) Out of 4 communication types (Poll, Bit strobe, COS, Cyclic), one DeviceNet can be selected through Configuration Tool (SyCon).
- ▶ Setup time and installation cost of the system will be saved from reduced connections and wiring works by using a single cable for communication power(24V) and communication signal line.
- ▶ Network setting and various diagnoses can be simply arranged through SyCon and XG-PD, in other words, diagnosis of the whole network or each slave is available.
- ▶ Real-time control over I/O devices in the lowest level of the network system is available. In addition, connection to various slaves I/O is available.
 - General I/O, actuator, proximity switch, optical switch, valve, inverter, A/D module, D/A module, position control, etc.

1.3 Information for Module Operation

- 1) It describes required components to operate the product.

| Classification | Type | Description | Reference |
|----------------|----------|--|---------------------|
| Series | XGL-DMEA | DeviceNet I/F module. | Master |
| Software | SyCon | Software for Station number, Speed, Communication methods, configuration of network setting. | - |
| | EDS | Including module information (Product code/Type, Maker name/Maker number) - It is used to configure the network in SyCon. | - |
| | XG 5000 | Software for PLC programming - XG-PD can be executed in XG 5000. | - |
| | XG-PD | Software for Send/Receive parameter setting. | Included in XG 5000 |

Remark

XG 5000 program can be downloaded at our company website. If you do not have an access to the internet, contact the nearest agency for CD-ROM about XG 5000. EDS file related to our slave module (Smart Link) can be downloaded at [Http://eng.lsis.biz](http://eng.lsis.biz).

- 2) It describes about the number of module and position that can be installed in a single CPU module.

| Classification | Description | |
|------------------------|--|----------------------------------|
| Position | XGK/XGI | Standard base and Extension base |
| | XGR | Extension base |
| Number | A maximum of 12 In case of using with other communication modules, It is able to install a maximum of 24 (But High-speed link setting is limited to 12) | |
| High-speed link number | A maximum of 12 (It can not set for P2P) | |

- 3) Please refer to below User Manuals to write communication program with Dnet I/F module.

- XGK Instruction Manual / XGI Instruction Manual
- XG 5000 User Manual
- XGK CPU User Manual / XGI CPU User Manual
- Smart I/O User Manual
- Other company's User Manual which is related to Dnet
- Extendable type Smart I/O User Manual

1.4 Configuration of Smart I/O for Dnet

1) Slave Products List of Stand-alone type

| Product | | | Details |
|-----------------|----------|--------------|--|
| Classification | Code | Designations | |
| Fixed type | 47060040 | GDL-D22A(N) | DC input 16 points |
| | 47060097 | GDL-D22A(Q) | DC input 16 points, Quick mode |
| | 47060039 | GDL-D24A(N) | DC input 32 points |
| | 47060098 | GDL-D24A(Q) | DC input 32 points, Quick mode |
| | 47060041 | GDL-TR2A(N) | TR output 16 points (0.1A, Sink) |
| | 47060099 | GDL-TR2A(Q) | TR output 16 points (0.1A, Sink), Quick mode |
| | 47060089 | GDL-TR2A1 | TR output 16 points (0.5A, Sink) |
| | 47060112 | GDL-TR2A1(Q) | TR output 16 points (0.5A, Sink), Quick mode |
| | 47060062 | GDL-TR2B | TR output 16 points (0.5A, Source) |
| | 47060103 | GDL-TR2B(Q) | TR output 16 points (0.5A, Source), Quick mode |
| | 47060042 | GDL-TR4A(N) | TR output 32 points (0.1A, Sink) |
| | 47060100 | GDL-TR4A(Q) | TR output 32 points (0.1A, Sink), Quick mode |
| | 47060080 | GDL-TR4A1 | TR output 32 points (0.5A, Sink) |
| | 47060113 | GDL-TR4A1(Q) | TR output 32 points (0.5A, Sink), Quick mode |
| | 47060061 | GDL-TR4B | TR output 32 points (0.5A, Source) |
| | 47060104 | GDL-TR4B(Q) | TR output 32 points (0.5A, Source), Quick mode |
| | 47060043 | GDL-DT4A(N) | DC input 16 points/TR output 16 points (0.1A, Sink) |
| | 47060101 | GDL-DT4A(Q) | DC input 16 points/TR output 16 points (0.1A, Sink), Quick mode |
| | 47060082 | GDL-DT4A1 | DC input 16 points/TR output 16 points (0.5A, Sink) |
| | 47060114 | GDL-DT4A1(Q) | DC input 16 points/TR output 16 points (0.5A, Sink), Quick mode |
| | 47060063 | GDL-DT4B | DC input 16 points/TR output 16 points (0.5A, Source) |
| | 47060105 | GDL-DT4B(Q) | DC input 16 points/TR output 16 points (0.5A,Source), Quick mode |
| | 47060044 | GDL-RY2A(N) | Relay output 16 points |
| | 47060102 | GDL-RY2A(Q) | Relay output 16 points, Quick mode |
| Changeable type | 47060053 | GDL-D22C | DC input 16 points |
| | 47060106 | GDL-D22C(Q) | DC input 16 points, Quick mode |
| | 47060052 | GDL-D24C | DC input 32 points |
| | 47060107 | GDL-D24C(Q) | DC input 32 points, Quick mode |
| | 47060054 | GDL-TR2C | TR output 16 points (0.5A, Source) |
| | 47060108 | GDL-TR2C(Q) | TR output 16 points (0.5A, Source), Quick mode |
| | 47060087 | GDL-TR2C1 | TR output 16 points (0.5A, Sink) |
| | 47060115 | GDL-TR2C1(Q) | TR output 16 points (0.5A, Sink), Quick mode |
| | 47060055 | GDL-TR4C | TR output 32 points (0.5A, Source) |
| | 47060109 | GDL-TR4C(Q) | TR output 32 points (0.5A, Source), Quick mode |
| | 47060081 | GDL-TR4C1 | TR output 32 points (0.5A, Sink) |
| | 47060116 | GDL-TR4C1(Q) | TR output 32 points (0.5A, Sink), Quick mode |
| | 47060056 | GDL-DT4C | DC input 16 points/TR output 16 points (0.5A,Source) |
| | 47060110 | GDL-DT4C(Q) | DC input 16 points/TR output 16 points (0.5A,Source), Quick mode |
| | 47060083 | GDL-DT4C1 | DC input 16 points/TR output 16 points (0.5A, Sink) |
| | 47060117 | GDL-DT4C1(Q) | DC input 16 points/TR output 16 points (0.5A, Sink), Quick mode |
| | 47060057 | GDL-RY2C | Relay output 16 points |
| | 47060111 | GDL-RY2C(Q) | Relay output 16 points, Quick mode |

Remark

- 1) Fixed type: A product whose I/O terminal block is fixed on the module.
- 2) Changeable type: A product whose I/O terminal block can be installed or removed.
- 3) Quick mode: A product whose initializing time is 1.5 sec. after the communication power is On.

Chapter 1 Introduction

2) Slave Products List of Extendable type

| Products | | | Details |
|---------------------------|----------|--------------|---|
| Classification | Code | Designations | |
| Communication Adapter | 47060131 | XDL-BSSA | Dnet I/F Adapter |
| Extendable I/O | 47230004 | XBE-DC32A | 24VDC Input 32points |
| | 47230010 | XBE-DC16A | 24VDC Input 16points |
| | 47230011 | XBE-DC08A | 24VDC Input 8points |
| | 47230006 | XBE-RY16A | Relay Output 16points |
| | 47230009 | XBE-RY08A | Relay Output 8points |
| | 47230005 | XBE-TN32A | Transistor Output 32points(NPN Type) |
| | 47230013 | XBE-TN16A | Transistor Output 16points(NPN Type) |
| | 47230012 | XBE-TN08A | Transistor Output 8points(NPN Type) |
| Extendable Special module | 47230014 | XBE-DR16A | 24VDC Input 9points/Relay Output 16points |
| | 47230007 | XBF-AD04A | Current/Voltage Input 4Ch |
| | 47230008 | XBF-DV04A | Voltage Output 4Ch |
| | 47230018 | XBF-RD04A | RTD input 4Ch |
| | 47230017 | XBF-DC04A | Current Output 4Ch |

Smart Link List for wiring of Extendable Slave products

| Classification | | Designations | Details |
|------------------|---|--------------|--|
| Terminal Board |  | SLP-T40P | Connection method is changed from connector to terminal board(40p) |
| Relay Board |  | SLP-RY4A | Output type is changed from Tr.(NPN type) output to relay output. Connection method is also changed from connector to terminal board(40p). |
| Connection Cable |  | SLP-C101-XB | Expansion length 1m, Plastic Hood Type, 40p |
| | | SLP-C201-XB | Expansion length 2m, Plastic Hood Type, 40p |
| | | SLP-CT101-XB | Expansion length 1m, Soft Tube Type, 40p |
| | | SLP-CT201-XB | Expansion length 2m, Soft Tube Type, 40p |

Chapter 2 Specifications

2.1 General Specifications

General specifications of XGT series are as specified below in Table 2.1.

| No. | Item | Specification | | | | Related specifications | |
|-----|--------------------|---|-----------------------------|--|--|---|-------------------------------|
| 1 | Operating temp. | 0℃ ~ +55℃ | | | | - | |
| 2 | Storage temp. | -25℃ ~ +70℃ | | | | - | |
| 3 | Operating humidity | 5 ~ 95%RH, no dew allowed | | | | - | |
| 4 | Storage humidity | 5 ~ 95%RH, no dew allowed | | | | - | |
| 5 | Vibration immunity | For discontinuous vibration | | | | - | |
| | | Frequency | Acceleration | Amplitude | Number | IEC61131-2 | |
| | | 10≤f< 57 Hz | - | 0.075mm | Each 10 times in X,Y,Z directions | | |
| | | 57≤f≤150 Hz | 9.8 m/s ² (1G) | - | | | |
| | | For continuous vibration | | | | | |
| | | Frequency | Acceleration | Amplitude | | | |
| | | 10≤f< 57 Hz | - | 0.035mm | | | |
| | | 57≤f≤150 Hz | 4.9 m/s ² (0.5G) | - | | | |
| 6 | Impact immunity | * Max. impact acceleration: 147 m/s ² (15G) * Authorized time: 11 ms * Pulse wave : Sign half-wave pulse (Each 3 times in X,Y,Z directions) | | | | | IEC61131-2 |
| 7 | Noise immunity | Square wave impulse noise | | ±1,500V | | Test specification of LS Industrial Systems | |
| | | Static electric discharging | | Voltage : 4kV (contact discharging) | | IEC 61131-2, IEC 61000-4-2 | |
| | | Radiation electromagnetic field noise | | 27 ~ 500MHz, 10 V/m | | IEC 61131-2, IEC 61000-4-3 | |
| | | Fast Transient /burst noise | Class | Power module | Digital/Analog I/O communication interface | | IEC 61131-2, IEC 61000-4-4 |
| | | | Voltage | 2kV | 1kV | | |
| 8 | Ambient conditions | No corrosive gas or dust | | | | | |
| 9 | Operating height | 2,000m or less | | | | | |
| 10 | Pollution level | 2 or less | | | | | |
| 11 | Cooling type | Natural air cooling | | | | | |

Table 2.1 General Specifications

Notes

[Note 1] IEC (International Electrotechnical Commission):

An international nongovernmental organization which promotes internationally cooperated standardization in electric/electronic field, publishes international standards and manages applicable estimation system related with.

[Note 2] Pollution level:

An index indicating pollution level of the operating environment which decides insulation performance of the devices. For instance, Pollution level 2 indicates the state generally that only non-conductive pollution occurs. However, this state contains temporary conduction due to dew produced.

2.2 Performance Specifications

1) Performance specifications

Performance specifications of DeviceNet (hereinafter referred to as Dnet) I/F module are as described below.

| Item | | Performance Specifications |
|----------------------------|----------------------------------|---|
| Transmission Specification | Transmission Speed (kbps) | 125/250/500 |
| | Transmission Type | Poll, Bit strobe, COS, Cyclic |
| | Communication distance(m) | Thick Cable 500 (125kbps)/250 (250kbps)/100 (500kbps) |
| | | Thin Cable 100 (125/250/500kbps) |
| | Terminal resistance (Ω) | 121 (1%, 1/4W) |
| | Max.drop length(m) | 125 kbps 6 (Max. extended length 156) |
| | | 250 kbps 6 (Max. extended length 78) |
| | | 500 kbps 6 (Max. extended length 39) |
| | Data Packet | 0~8 Bytes |
| | Message Access Control | CSMA/NBA |
| | Network Structure | <ul style="list-style-type: none"> • Trunk/drop line • Power/Signal cable inside the identical network cable |
| | Bus Type | <ul style="list-style-type: none"> • Poll type |
| | Max. number of nodes | Up to 64 (including master) MAC IDs (MAC Identifier) |
| | System Features | Insertion and removal of node available in voltage On status |
| | Operation Voltage | DC 24V |
| Basic Specification | Diagnosis Function | Module: Checks duplicated station/ Checks CRC error SyCon: Detects defective station/Checks BusOff/Auto-scan function XG-PD: Monitors High-speed link |
| | Master/Slave Operation | Available only in master |
| | Parameter setting | 1) SyCon (CONFIG Port of Dnet I/F) 2) Setting to High-speed link of XG-PD (RS-232C of CPU module or USB port) |
| XG-PD (High-speed link) | Data process unit | Byte |
| | Send/Receive period | Select among 20ms, 50ms, 100ms, 200ms, 500ms, 1s, 5s and 10s - Default : 20ms |
| | Max. communication point | Send 28672points, Receive 28672 points, 3584 bytes respectively |
| | Max. block number | 63 (Setting range: 0~62) |
| | Max. point number per block | 2048 points (256 bytes) |
| Basic Specification | Max. modules installed | Up to 12 (available on basic base and added base) |
| | Internal-consumed current (mA) | 440 |
| | Weight (g) | 110 |

Remark

- 1) Transmission distance of Dnet I/F module is inversely proportional to data transmission rate. If thin cable is used, the transmission distance will be limited to 100m regardless of data transmission rate.
- 2) CSMA/NBA (Carrier Sense Multiple Access with Non-destructive Bitwise Arbitration)
- 3) If the station No. of Dnet I/F module (master module) is specified, surely reset the applicable slave module.

2) Communication methods

Communication methods can be set per module when it is supported by slave module.

Setting of Slave insertion/setting in SyCon is as shown below.

(1) Automatic setting: **Online** → **Automatic Network Scan**

(2) Manual setting: **Settings** → **Device Configuration**

Communication method's features are as shown below.

| Communication method | Feature |
|--------------------------|---|
| Poll | Master and slave module Send/Receive the data by one on one. |
| Bit-Strobe | It is used only in input module. The way to transmit data simultaneously for master module from its input type slave modules when the master module's data transmission request is received. |
| COS (Change of State) | If input data status of slave module is changed, slave module transmits changed data to master module. But output type slave module, Settings → Device Configuration Menu selection → Connection Object Instance Attributes Setting window → Expected Packet Rate Category, transmits every time according to its setting rates. |
| Cyclic | Slave module attempts to Send/Receive periodically. Communication period setting, Settings → Device Configuration Menu selection → Connection Object Instance Attributes Setting window → Expected Packet Rate Category, sent/receives data periodically between master and slave module according to its setting periods. |

So, Communication method should be used with cautions along with data process of Input/Output module in the system.

3) EDS (Electronic Data Sheet) file

- It is to allow other vendors to use restricted information of product through EDS file format.

Restricted information of product: Maker name and unique number (ODVA Certification)

Module information (Master and slave module)

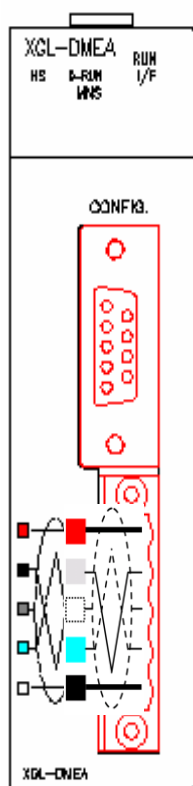

Input/Output module information (Input point, Output point)

Information on communication support method

- EDS file addition: It can be executed by **File** → **Copy EDS**.

Copied EDS file can be used only when located under EDS folder of SyCon execution directory

2.3 Part names and Structure

(1) LED display parts

| LED | | Status | LED display description |
|-------|------------------|----------------|---|
| RUN | On | Normal | Completion of initializing. |
| | Off | Error | Error is occurred. |
| I/F | Flickering | Normal | Normal status of interface in CPU module. |
| | On/Off | Error | Error status of interface in CPU module. |
| HS | On | Normal | Normal status when High-speed link is enabled. |
| | Flickering | Waiting | Communication is disconnected between Dnet I/F and Slave module while downloading at High-speed link enabled status by SyCon. |
| | Off | Error | High-speed link service is in Critical error while High-speed link is enabled. |
| D-RUN | Flickering | Stop | Stop status of communication between Dnet I/F module and slave module. |
| | On | Communicating | Communication status of Dnet I/F module and slave module. |
| MNS | Off | Power Off | <ul style="list-style-type: none"> Waiting status of Dnet I/F module communication. Non-completed status of Checking duplicated MAC ID on network. It is not supplied external power supply (DC24V). |
| | Green Flickering | Waiting | Communication waiting status between Dnet I/F module and slave. - It is recognized the information of network (Station number, ID, Communication speed) in SyCon. |
| | Green Flickering | Normal | Normal communication status between Dnet I/F module and slave. |
| | Red Flickering | Error | Slave module is separated network while communicating. |
| | Red Flickering | Critical error | <ul style="list-style-type: none"> Dnet I/F module could not access the network. Non-ability status of Communication (Bus Off). Duplicated ID module is existed in network. |

(2) RS-232C connector for SyCon connection

| Dnet I/F module | | Connection number and signal direction | Computer/Communication equipment |
|-----------------|------|--|----------------------------------|
| Pin num. | Name | | Name |
| 1 | CD | | CD |
| 2 | RXD | | RXD |
| 3 | TXD | | TXD |
| 4 | DTR | | DTR |
| 5 | SG | | SG |
| 6 | DSR | | DSR |
| 7 | RTS | | RTS |
| 8 | CTS | | CTS |
| 9 | RI | | RI |

* Loader cable is common XGK CPU module and GM/MK module loader cable.

(3) 5 pin connector (for external connection)

| Color | Signal | Service | 5 pin connector |
|-------|-----------|---------------|-----------------|
| Red | DC 24V(+) | Vcc | |
| White | CAN_H | Signal wire | |
| Bare | Drain | Shielded wire | |
| Blue | CAN_L | Signal wire | |
| Black | DC 24V(-) | GND | |

2.4 Cable Specifications

1) Cable specifications (Belden)

| Classification | Thick (class1) | Thick (class2) | Thin (class2) | Trunk and Drop line is used concurrently |
|--------------------------------|----------------|----------------|---------------|--|
| Type | 7897A | 3082A | 3084A | |
| Cable Type | Round | | | |
| Impedance (Ω) | 120 | | | |
| Temperature range (℃) | -20 ~ 75 | | | |
| Max. allowable current(A) | 8 | | 2.4 | |
| Min. radius of curvature (in.) | 4.4 | 4.6 | 2.75 | |
| Core wire number | 5 wires | | | |

2) Maximum trasmission distance for repective cable types

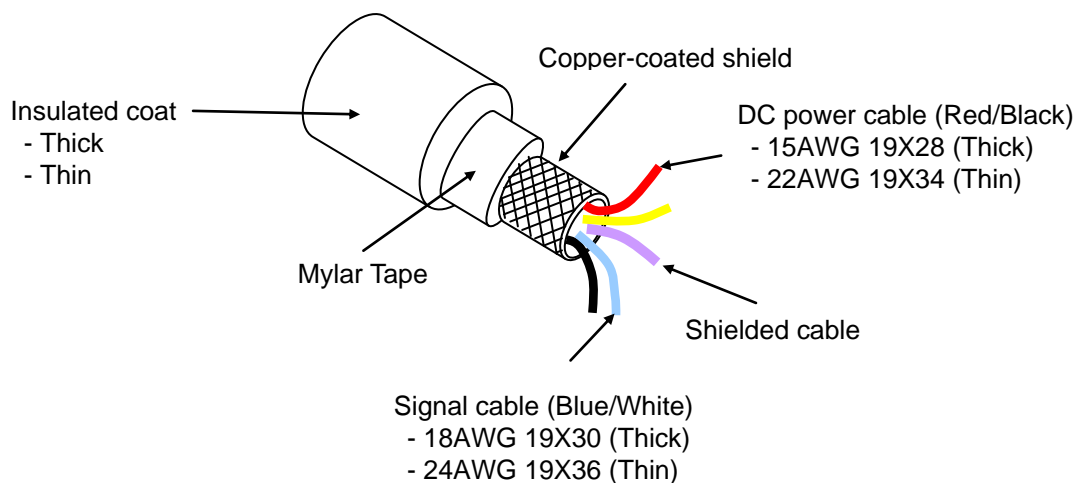

(1) If one type of trunk line is used

| Transmission speed | Maximum distance | |
|--------------------|------------------|------------|
| | Thick cable | Thin cable |
| 125kbps | 500m | 100m |
| 250kbps | 250m | 100m |
| 500kbps | 100m | 100m |

(2) If mixed with trunk line

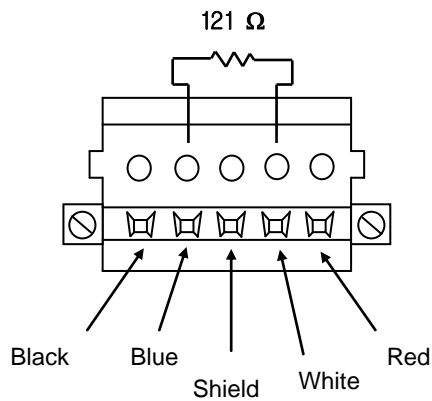

| Transmission speed | Max. distance if Thin and Thick cables are used as mixed |
|--------------------|--|
| 125kbps | Thick cable length + 5 x Thin cable length ≤ 500m |
| 250kbps | Thick cable length + 2.5 x Thin cable length ≤ 250m |
| 500kbps | Thick cable length + Thin cable length ≤ 100m |

3) Structure

2.5 Terminating Resistances

- Attach 121Ω, 1%, 1/4W of resistance to both ends of the network.
- Connect connector's CAN_H (White) with CAN_L (Blue) signal cable.

- Connection Connector

| Classification | Cable connection method | |
|----------------|---|--|
| | single direction connector | dual direction connector |
| Shape |  |  |

Remark

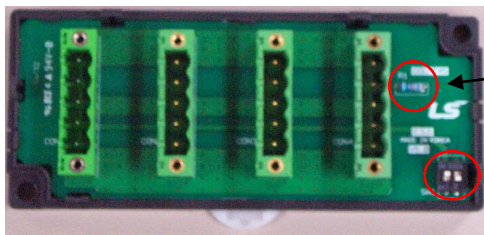

- 1) Be sure to attach the terminating resistor to both ends of the network trunk line, or to both ends of the tap if composed of device port tap. If the terminating resistor is omitted, communication will not be normal.
- 2) If the terminating resistor is installed on the port tap, it is not necessary to install an additional terminating resistor.

2.6 Tap/Divider

1) 4-Port / 8-Port Tap (LSIS)

If you use multi tap, it is convenient to configuration and modification of network system.

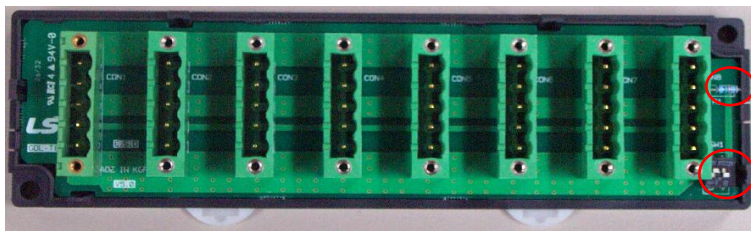

(1) 4-Port tab (GDL-T4S)

Resistor for Termination
(121Ω, 1%, 1/4W)

Switch for termination resistor
(Switch no.1 is used)

(2) 8-Port tab (GDL-T8S)

Resistor for Termination
(121Ω, 1%, 1/4W)

Switch for termination resistor
(Switch no.1 is used)

Remark

- 1) Be sure to set switch for the terminating resistor which is come under both ends of the network trunk line to On. If the terminating resistor is omitted, communication will not be normal.
- 2) If you want to use multi tap two more than, don't set all switch for the terminating resistor to On. Because communication will not be normal.

(1) 1-Branch tap (DCN-2C)

[illegible]

| | | | |
|--|--|--|--|
| | | | |
|--|--|--|--|

Chapter 3 Installation and Test Operation

3.1 Installation

3.1.1 Precautions for installation

For system configuration through Dnet I/F module, carefully make sure of the following items prior to installation.

- 1) Check the basic factors necessary for system configuration so to select an appropriate communication module.
- 2) Prepare accessories such as cable, tap and terminating resistor used for communication module.
- 3) Speed of communication modules shall be identical respectively based on the communication speed applicably used for the communication module in compliance with cable specifications.
- 4) If the tap is used, surely apply terminating resistor to the tap of both ends.
- 5) In a single network, it must be set without duplicated station number.
- 6) Before the communication module is installed, check for any power supply, any foreign material on the base connector the module will be installed on and any damage on the connector pin of the module.
- 7) The module when installed on the base board or used solely shall be securely connected with the correspondent. If the connection is incomplete, interface with CPU may be abnormal.
- 8) Communication speed to be applied to this communication module is 125/250/500kbps. In order to change the communication speed of slave module once specified, let it powered off and then change the communication setting switch to apply the changed mode.

3.1.2 Materials necessary for installation

| Materials necessary | Dnet I/F module |
|----------------------|--|
| Communication cable | Thick cable/Thin cable (only for Dnet) |
| Tap | 4,8-port tap |
| Terminating resistor | Terminating resistor : 121Ω, 1%, 1/4W |
| 24V power supplier | General power supplier |
| Connector | Open type 5-pin connector |

3.1.3 Installation

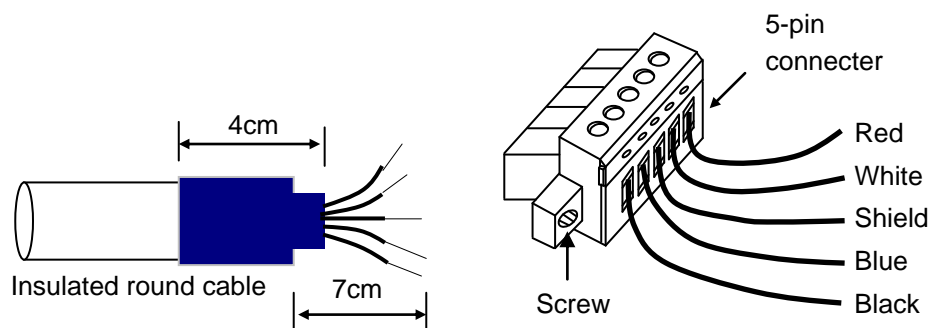

1) Precautions for installation of the connector

Prior to installation of the connector, please pay attention to the following.

- (1) Installation shall be performed when no signal and power supply is carried by cable.
- (2) If the module installed on the system operates, stop the operation prior to installation.

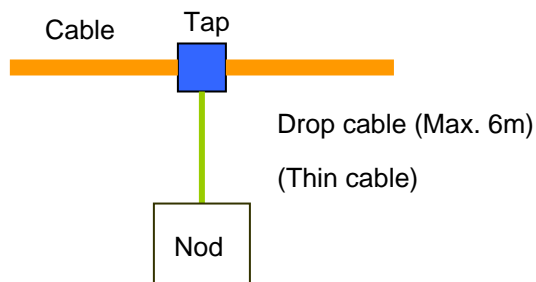

After the installation is complete, secure the applicable cable tightly so to keep from being vibrated or escaped.

2) How to install the connector

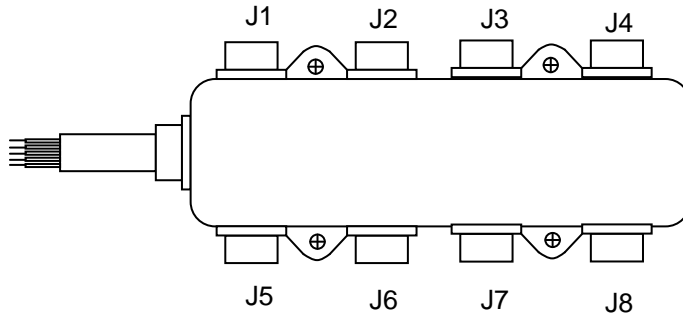

- (1) First, slip off the coat of the cable about 7cm to connect.
- (2) Cut the packing cover contracted about 4cm to cover on the cable and wrap up the exposed conductor and insulated coat of the cable.
- (3) Slip off the coat of the cable about 8mm at the both ends respectively and apply heat to the packing cover contracted to adhere closely to the cable.
- (4) Insert the slipped coat into the connector's clamp screw with a proper distance and tighten the screw (DC power supply and signal line is in identical cable, so ,be sure to make designation of the signal identical between cable and connector).

Tap-applied method and drop-applied method are available for the cable connection. And DC 24V power is recommended to be installed on the position necessary to keep the voltage when lots of Dnet I/F modules are expected or the cable is expected to get long.

3) How to install the tap (8-port tap)

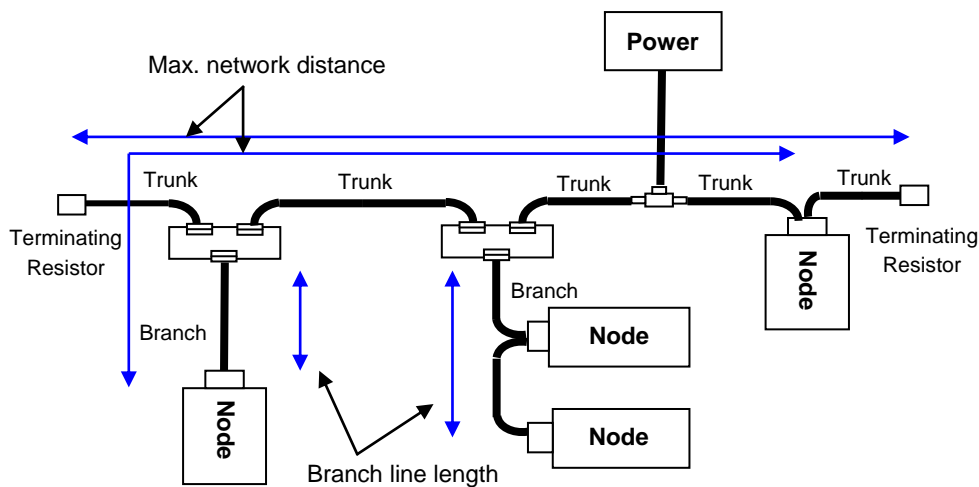

Connect to device port tap's trunk line where up to 8 connections and disconnections are available.

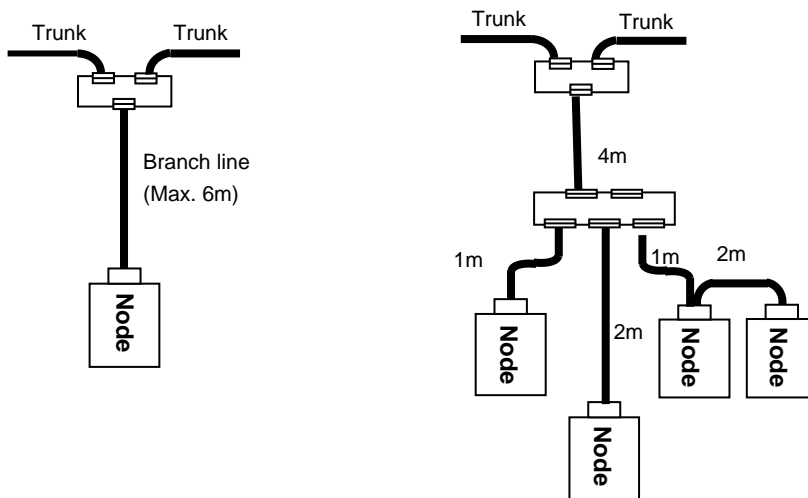

- (1) The drop line composed of Thick or Thin cable can be connected with the device through the tap. And if it is a Open-Style tap, 3 types of connectors can be used.
 - Pluggable screw type
 - Hard-wired screw type
 - Soldered type
- (2) The cable is most desirable to connect with drop line when the system does not operate. If the cable is to be connected when the system operates, check the connection status with other devices and let it connected with the trunk line so to avoid the influence on communication.
- (3) When connected with the trunk line, don't let the max. allowable length exceeded.

4) How to connect with network

- (1) Max. network distance: stands for the distance between nodes most far away or between terminating resistors.

(2) Branch line length: stands for the length (max. 6m) from the first branched position of the trunk line to the last of the branch line.

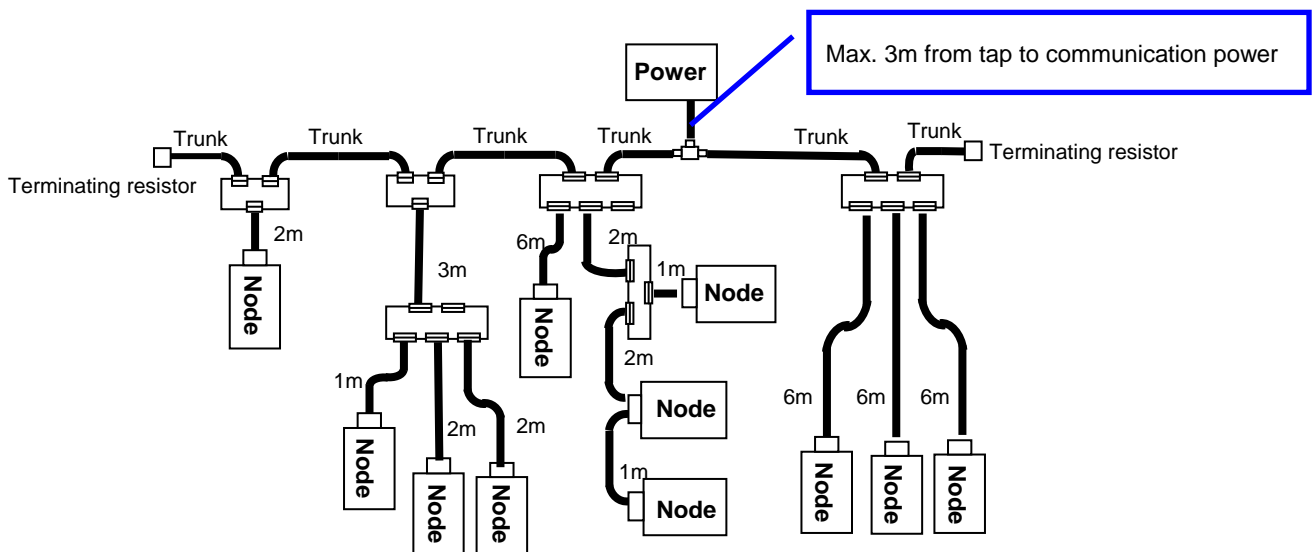

(3) Communication distance compared with communication speed

| Communication speed | Max. network length | | Branch line length | Branch line length in total |
|---------------------|---------------------|--------------|--------------------|-----------------------------|
| | Thick | Thin | | |
| 500kbps | 100m or less | 100m or less | 6m or less | 39m or less |
| 250kbps | 250m or less | | | 78m or less |
| 125kbps | 500m or less | | | 156m or less |

5) Branch line length in total

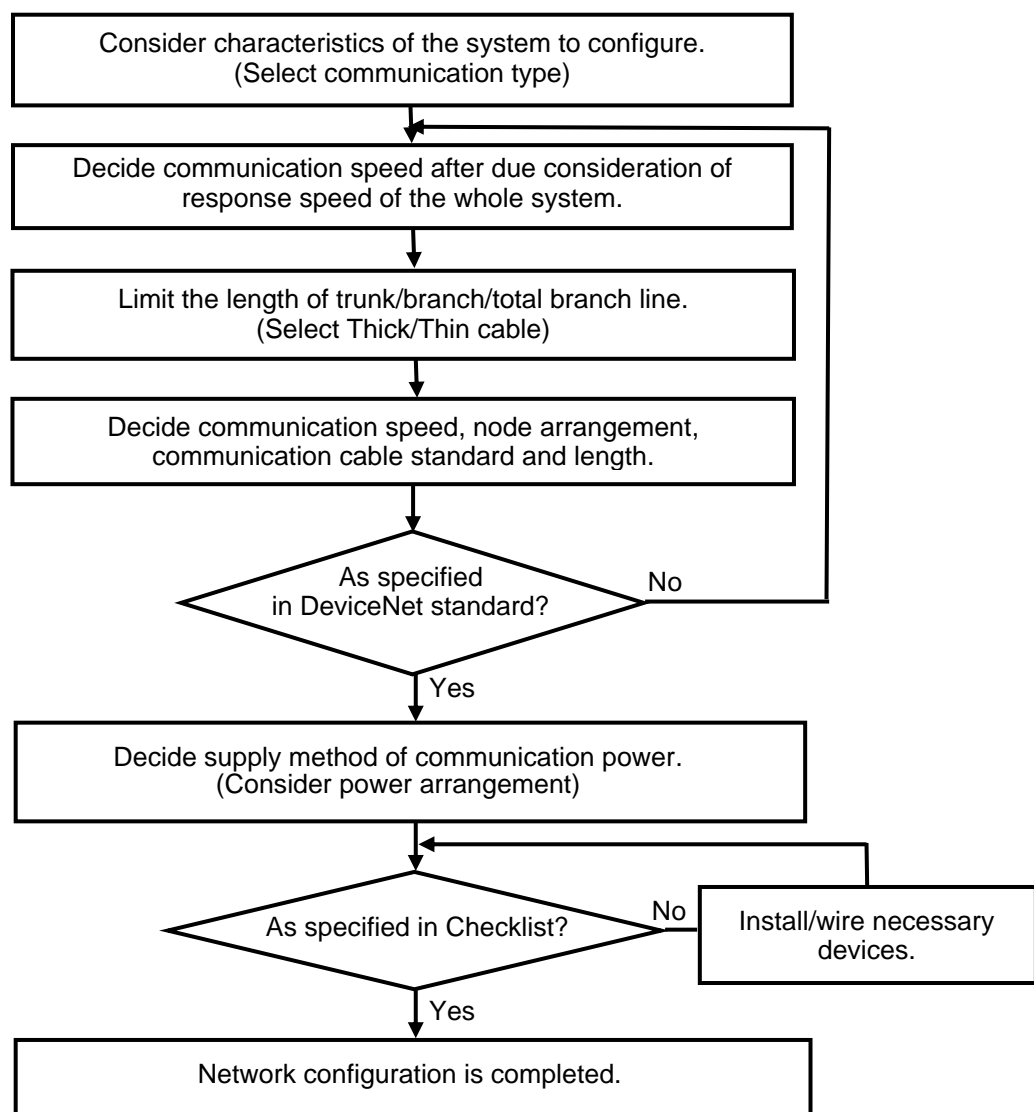

- Distance of accumulated branch line length (length of each branch line shall be within the max. 6m)

As for the configuration example above, since the branch line length is within 6m, there is no problem in the branch line length. However since the total length of the branch line is 40m which does not comply with the max. branch line length of 39m with communication speed of 500kbps, 250 and 125kbps are only available for communication.

6) Network configuration and Checklist

Prior to the first network configuration, please check the system to be installed in the sequence as specified below;

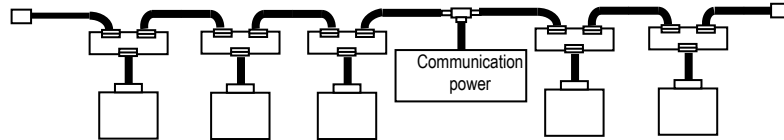

7) Power arrangement

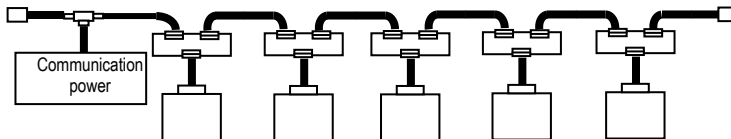

4 types of power arrangement are available as shown below.

At this time, the distance between power and power tap shall be within 3m.

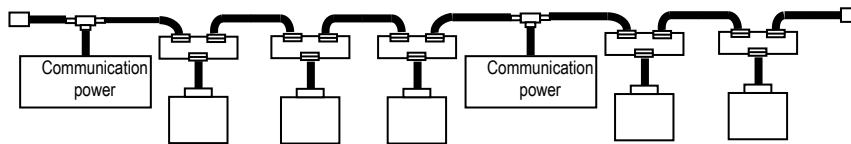

(1) If node is arranged in both directions of power

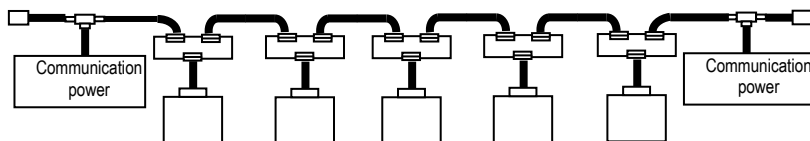

(2) If node is arranged in a direction of power

(3) If the system of power supply is separated, with the plural power installed

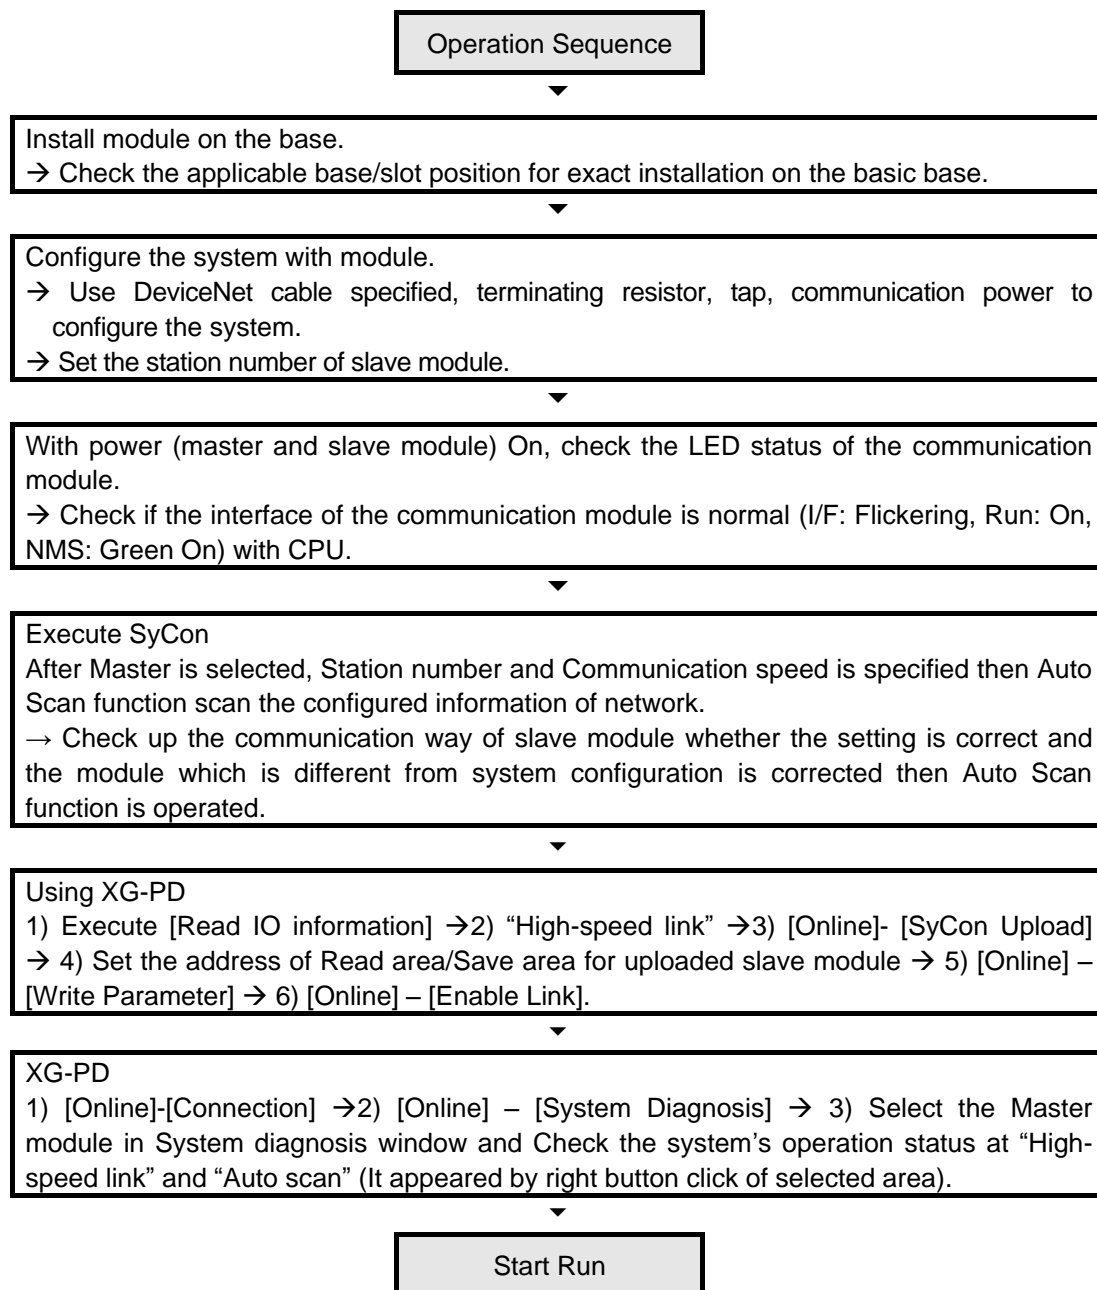

(4) If power duplicated

3.2 From Setting to Operation

The sequence of the product from installation to operation will be described below. After the product installation is complete, install and configure the system to be operated as specified in the following sequence.

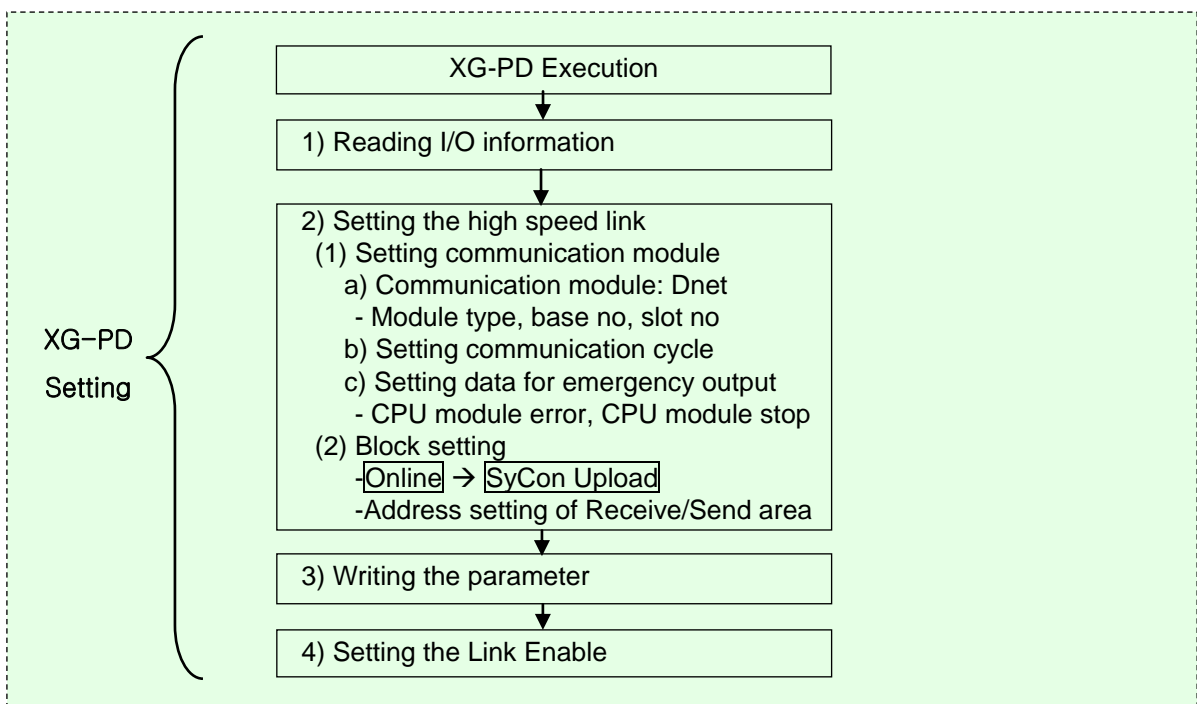

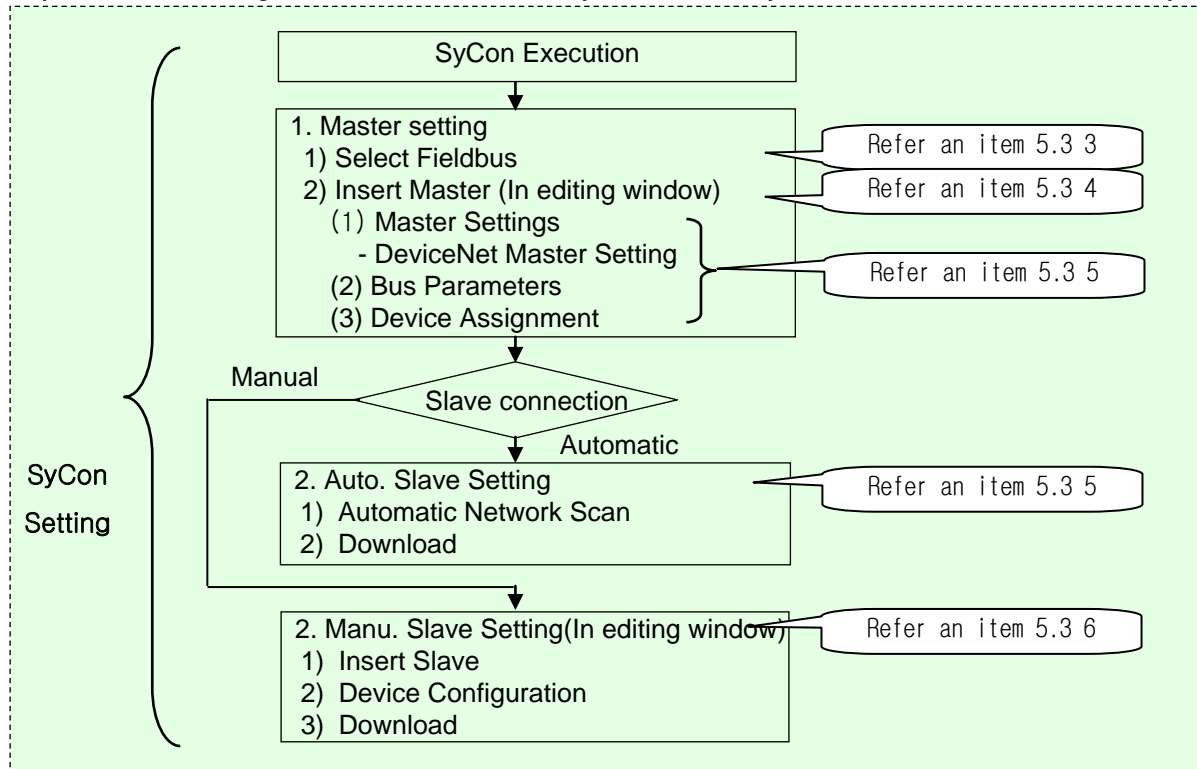

Remark

- 1) When the first station No. is initialized, the value read from the communication module will be kept continuously. Thus, the details changed (station No., etc.) during communication will not be applied during operation.

3.3 Setting Procedure of SyCon and XG-PD

After setting the network configuration in SyCon software, then set the high speed link parameter and data in XG-PD software.

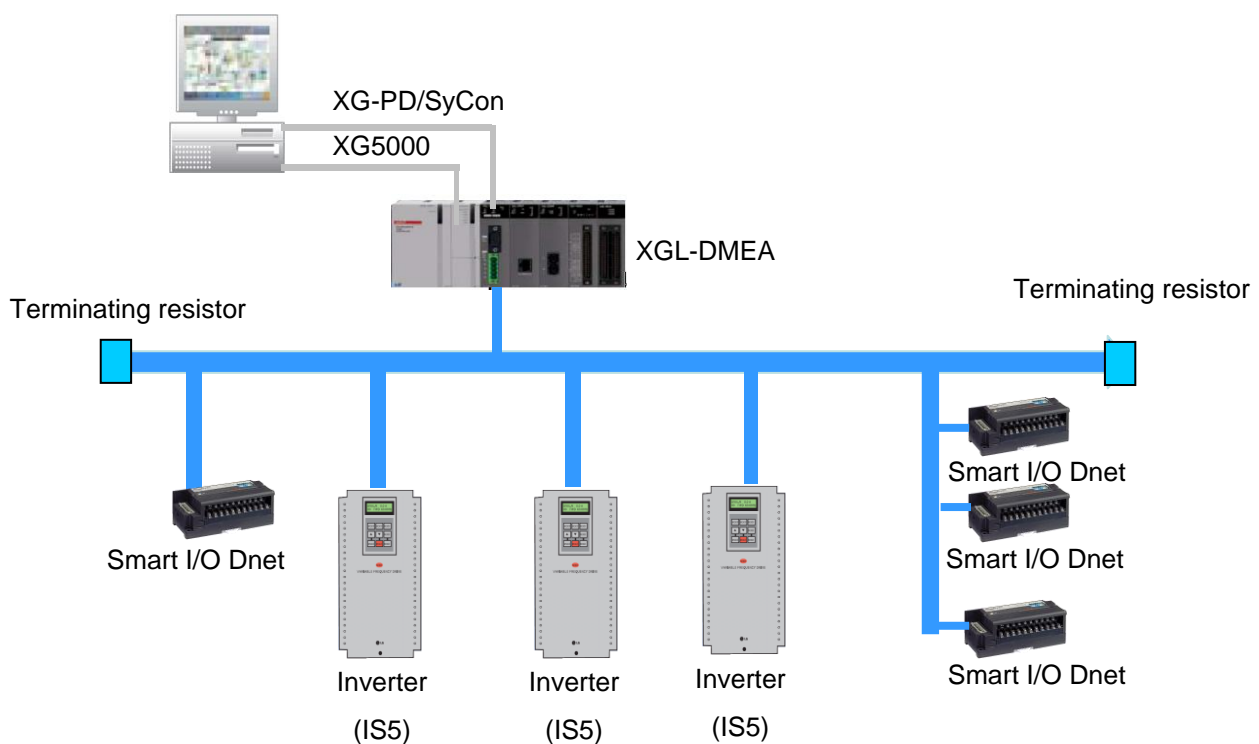

If you don't set configuration of the network in SyCon software, you can not communicate normally.

Chapter 4 System Configuration

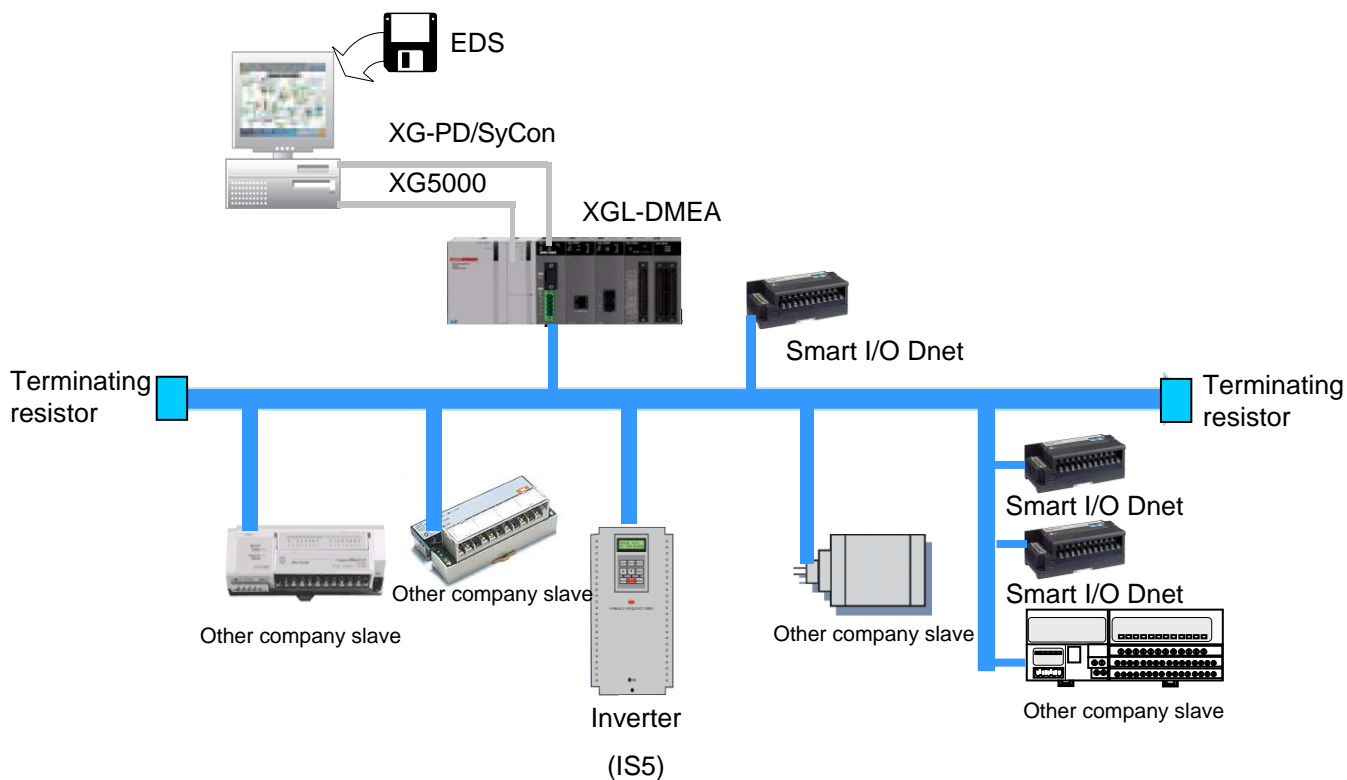

4.1 System with LS Dnet I/F module used

Communication system between LS Dnet I/F modules can be configured as shown below. In the system, XGL-DMEA communication module shall be set to the master and the rest set to slave modules. In order to connect with LS inverter, Dnet I/F option module shall be installed on the applicable product to make the communication available.

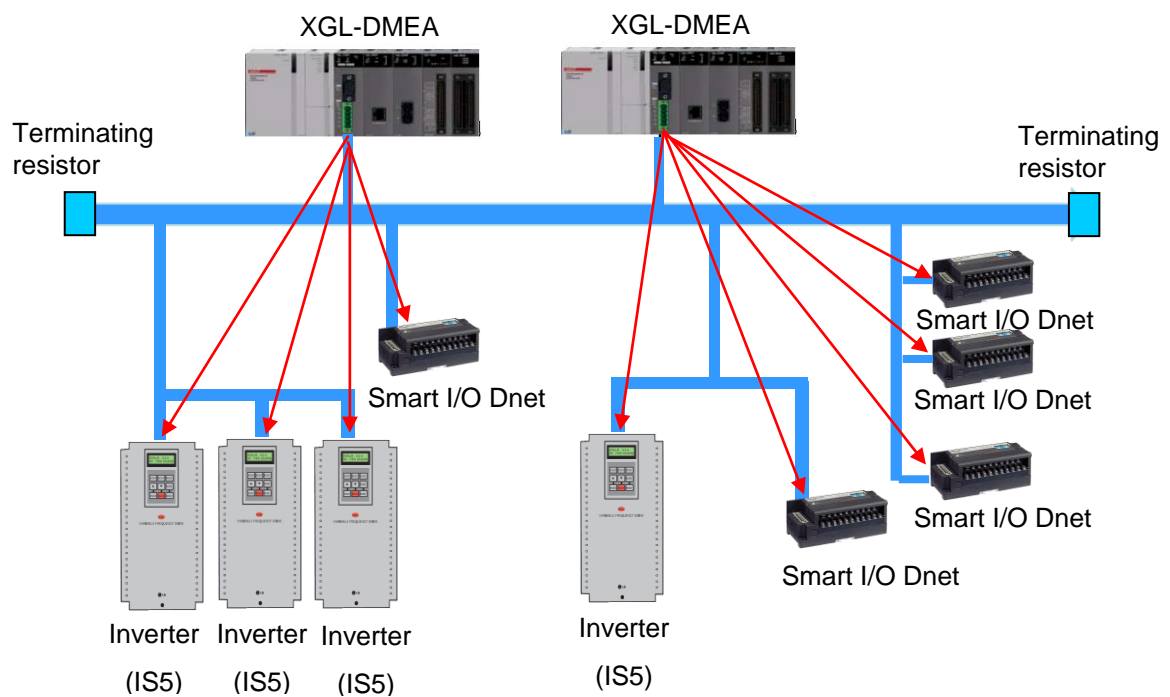

4.2 System with LS Dnet I/F module and LS or other company's slaves mixed

In order to use other company's slave module, EDS (Electronic Data Sheet) file provided by its maker is necessary. Copy EDS file on the EDS folder of SyCon, the software tool for Dnet configuration and then use SyCon automatically to set the slave modules existent in the network.

4.3 System with Multi-master used

Communication system between LS Dnet I/F modules can be configured as shown below. In the system, set all the two XGL-DMEA modules to the master and then let the slave modules exist in the network shared with respective masters to make the communication available in the same network.

Chapter 5 SyCon Settings

5.1 SyCon S/W Environment

5.1.1 SyCon S/W configuration file

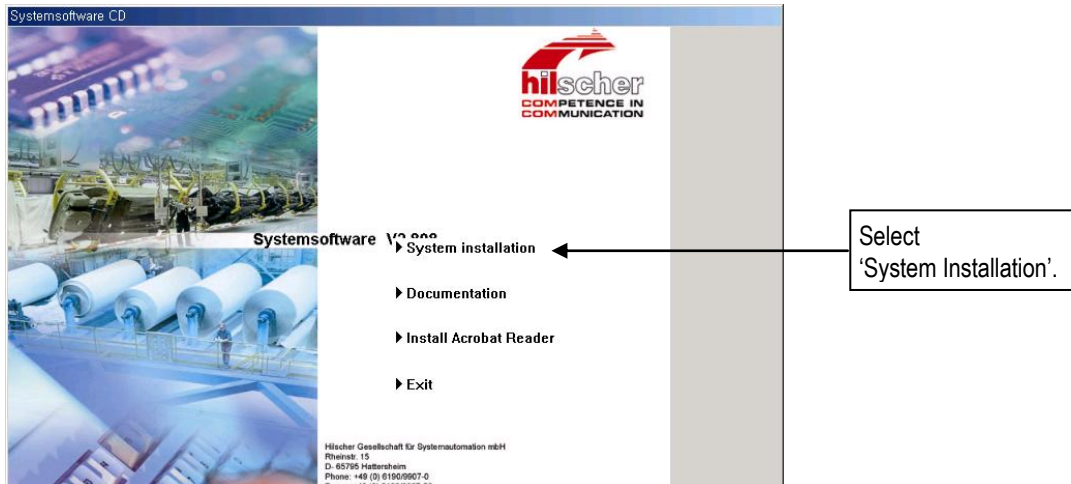

| Name | Size | Type |
|--------------|----------|-------------------|
| Driver | | File Folder |
| Eds | | File Folder |
| Manuals | | File Folder |
| Sycon | | File Folder |
| autorun.bmp | 1,407 KB | ALSEE.BMP |
| autorun.exe | 320 KB | Application |
| AUTORUN.INF | 1 KB | Setup Information |
| cd-key.txt | 1 KB | Text Document |
| HILSCHER.ICO | 1 KB | Icon |

5.1.2 System requirement

- Pentium 486 MHz above
- Windows 95/98/ME/NT/2000/XP
 - Windows 95: Service Pack 1 above
 - Windows NT: Service Pack 3 above
- 80Mbytes minimum free space
- CD ROM Drive required
- RAM memory minimum 16Mbytes required
- Graphic Resolution: 800 x 600 pixel minimum
- Windows 95: Service Pack 1 above
- Windows NT: Service Pack 3 above

5.2 SyCon Program Installations

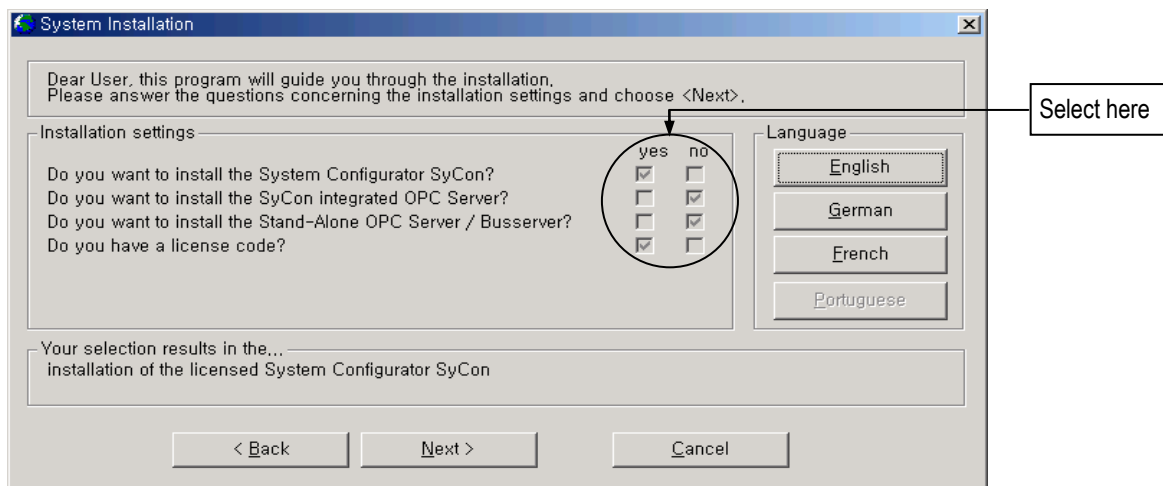

1) Executes 'Autorun.exe'.

→ Selects 'System Installation'.

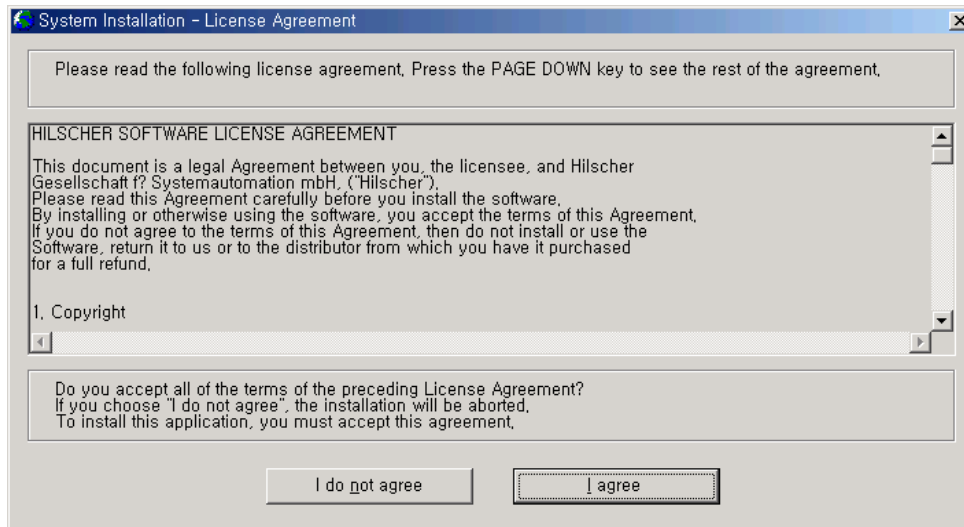

2) Executes 'System Installation'.

- (1) Do you want to install the System Configurator SyCon? → yes
- (2) Do you want to install the SyCon Integrated OPC Server? → no
- (3) Do you want to the Stand-Alone OPC Server/Busserver? → no
- (4) Do you have a License code? → yes
- (5) Select Language.

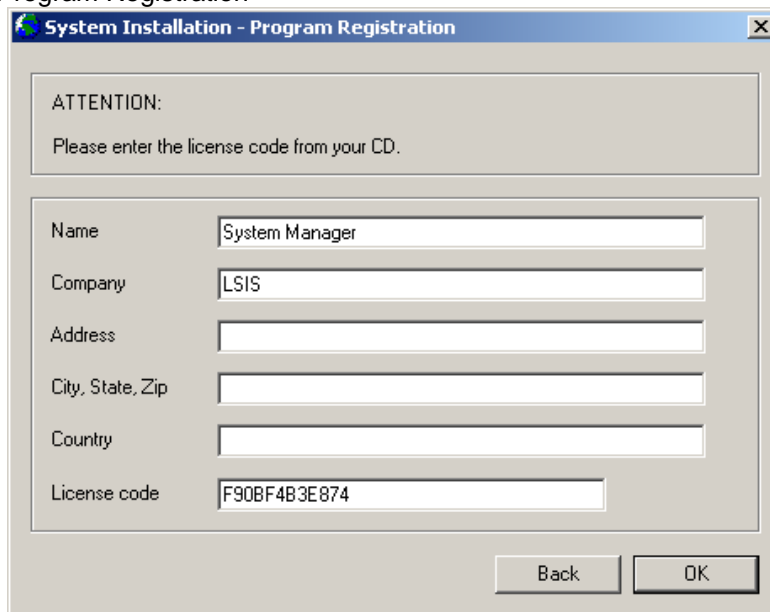

→ Select 'Next'.

3) License Agreement

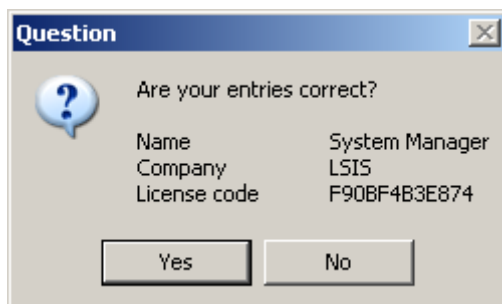

→ Select 'I agree'.

4) Program Registration

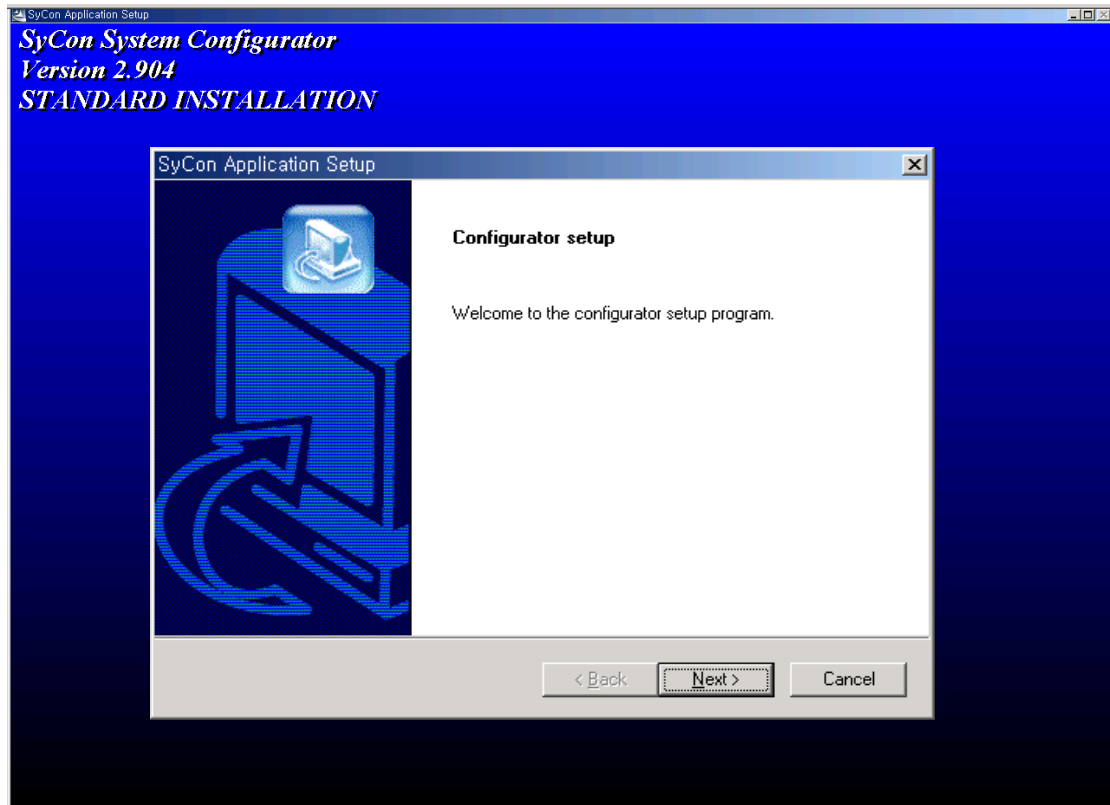

License Code: F90BF4B3E874

→ Select 'OK'.

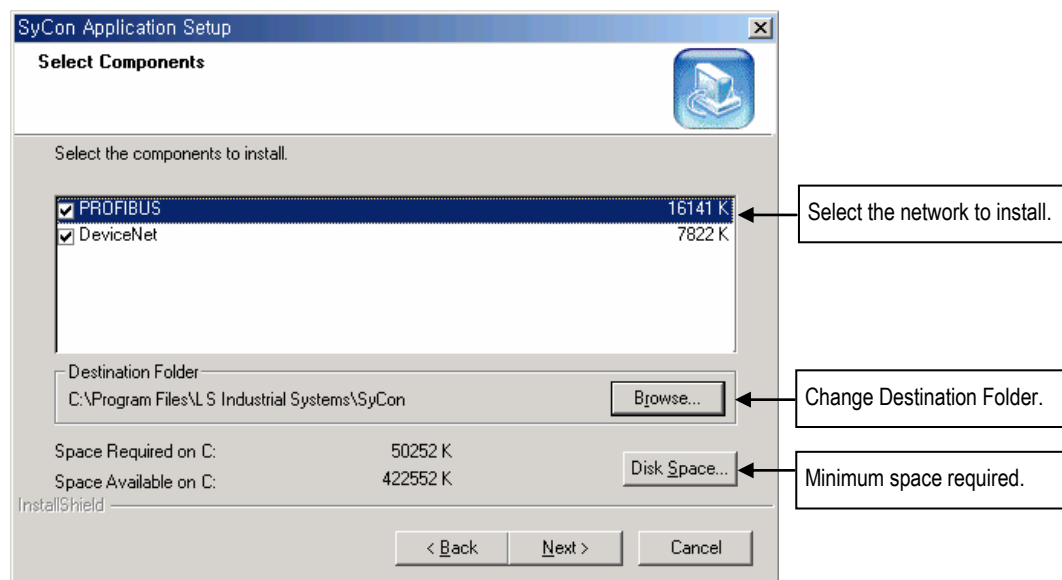

→ Select 'Yes'.

5) Configuration setup

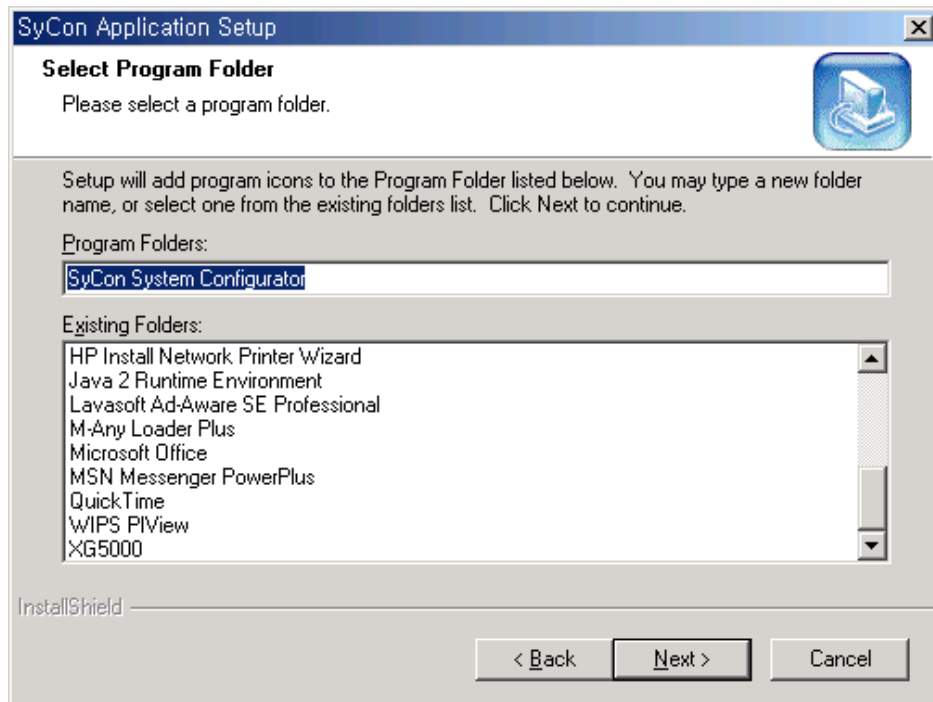

→ Select 'Next'.

(1) Components

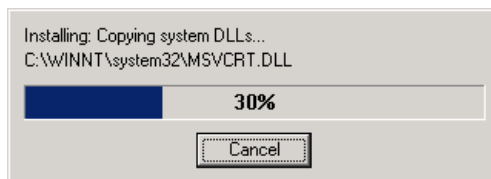

→ Select 'Next'.

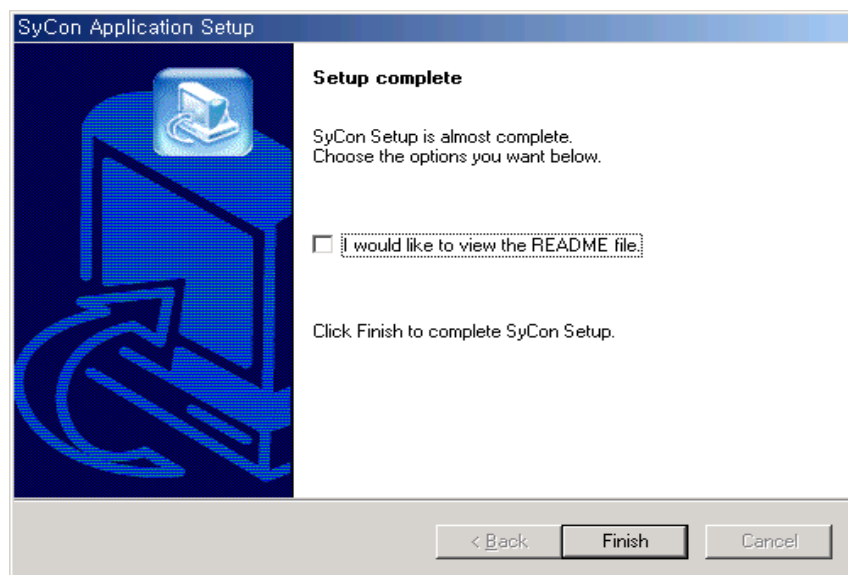

(2) Program Folder

→ Select 'Next'.

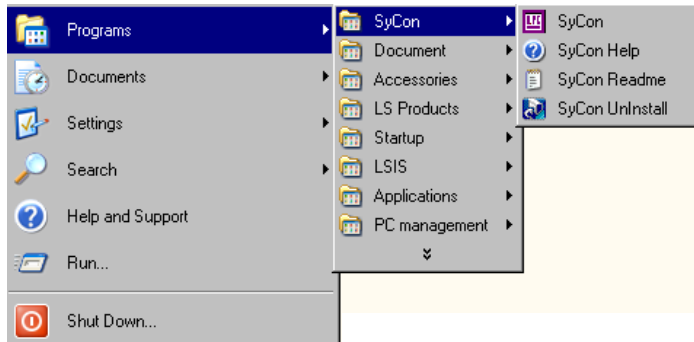

(3) Setup complete

Chapter 5 SyCon Settings

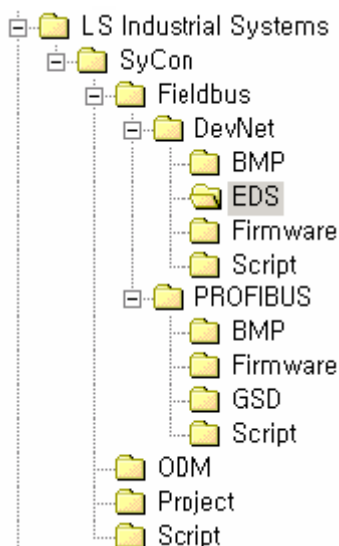

6) Content installed

(1) Execution file

(2) Folder

- File destination: C:\Program Files\LS Industrial Systems\SyCon

(3) EDS file for DeviceNet

EDS file is created automatically as shown below.

| Name | Size | Type |
|--------------|------|------|
| GDL-D22A,eds | 1KB | EDS |
| GDL-D24A,eds | 1KB | EDS |
| GDL-DT4A,eds | 2KB | EDS |
| GDL-RY2A,eds | 1KB | EDS |
| GDL-TR2A,eds | 1KB | EDS |
| GDL-TR4A,eds | 1KB | EDS |
| is5v2_1,eds | 75KB | EDS |

5.3 SyCon Execution

Set the basic parameter for Dnet communication between master and slave. Master and slave configuration has 2 methods as shown below.

(1) Configuration with EDS file

Advantages: It can be set the slave which is not connected actually.

Disadvantages: If setting is wrong, the communication is operated abnormally.

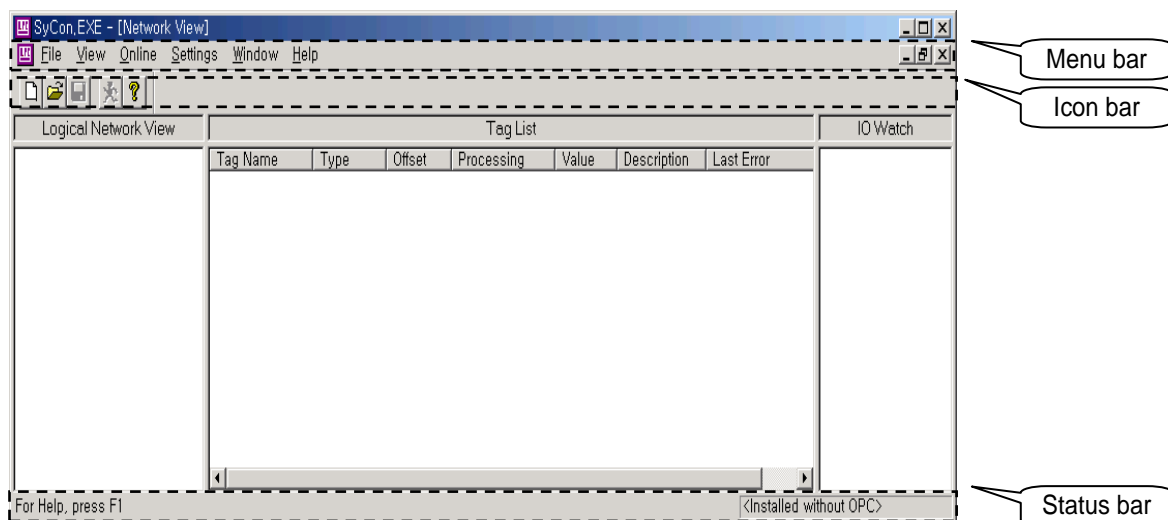

(2) Auto Scan

Advantages: It can be set the parameter easily and speedy.

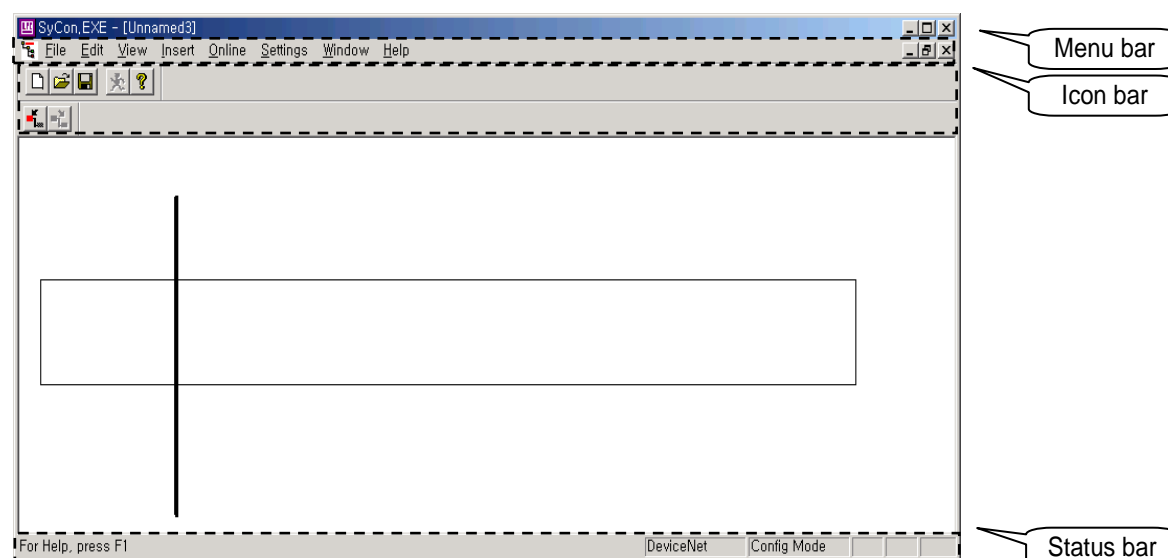

Disadvantages: It can be set only connected slave.

So, Use the methods properly by situation.

1) Initial screen execution

- 5) Master setting
To set Master, Master must be selected in editing screen.

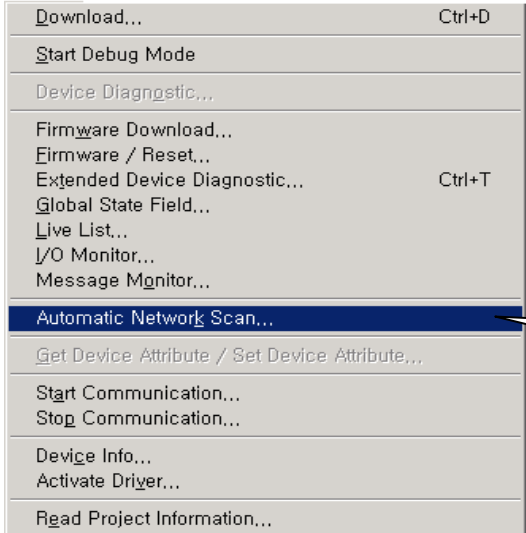

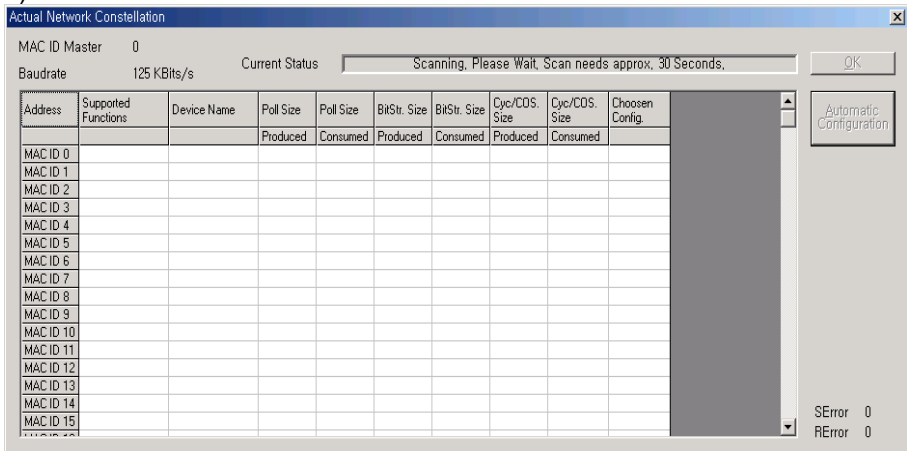

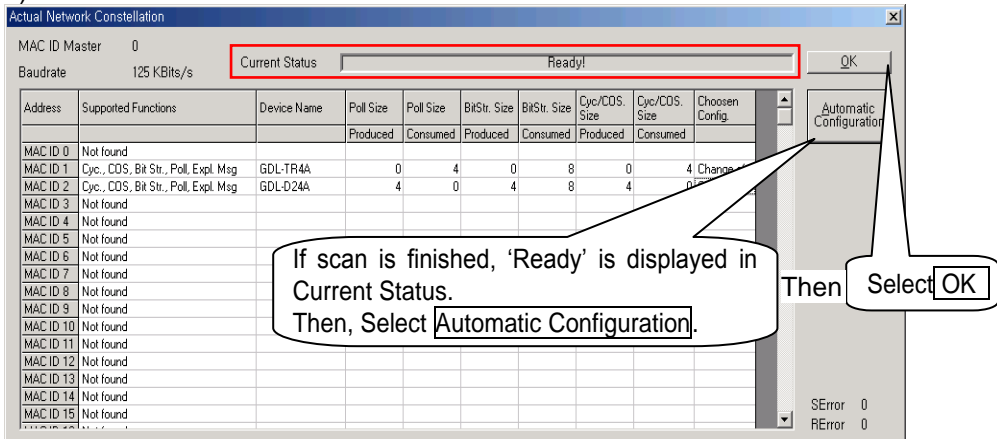

(1) Setting sequence

| Step | Description |
|------|--|
| 1 | <p>Master selection in editing screen</p>  <p>The screenshot shows the SyCon.EXE application window. The menu bar includes File, Edit, View, Insert, Online, Settings, Window, and Help. Below the menu bar is a toolbar with icons for file operations and help. The main workspace displays a 'DeviceNet' icon on the left and a 'Master' section on the right. The 'Master' section is highlighted with a dashed border and contains the text 'MAC ID 0' and 'COM-C-DNM'. A callout bubble points to this section with the text 'Selected Master'. At the bottom of the window, there is a status bar with the text 'For Help, press F1' and buttons for 'DeviceNet' and 'Config Mode'.</p> |
| 2 | <p>Master Setting: Settings → Master Settings</p>  <p>The screenshot shows the 'Settings' menu open. The menu items are: Device Assignment... (Ctrl+B), Bus Parameters..., Master Settings... (highlighted), Device Settings..., Device Configuration..., Auto Addressing (checked), Project Information..., Path..., and Language... A callout bubble points to the 'Master Settings...' option with the text 'Select'.</p> |

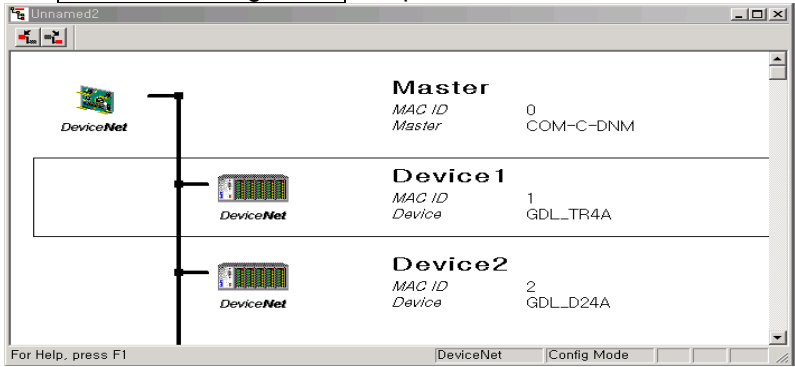

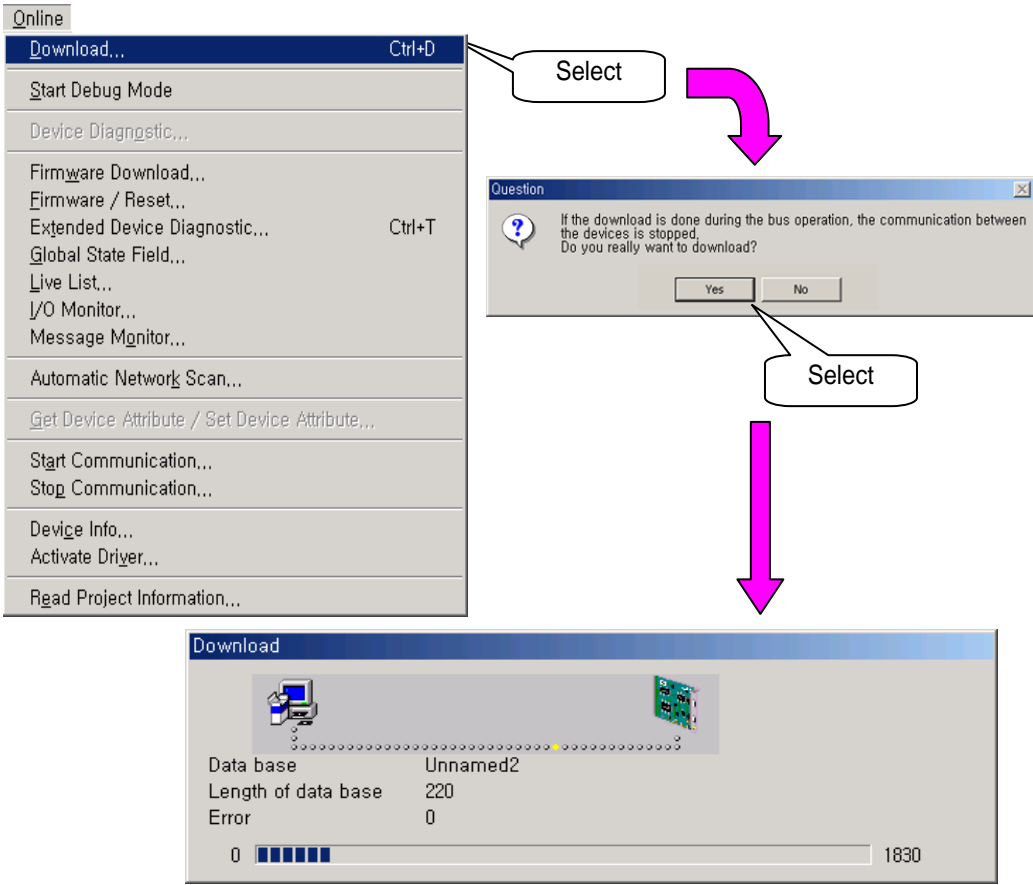

| Step | Description |
|------|--|
| 3 | <p>1) To change or set MAC ID and Master name</p>  <p>2) Select Settings</p> <p>DeviceNet Master Setting</p>  <p>☞ Select 'Buffered, host controlled' in 'Handshake of the process data' from 'No consistence, uncontrolled'</p> <p>(1) Parameter to user interface: Do not change default setting. Default setting: A) Start behavior after system Initialization. → Controlled release of the communication by the application program B) User program monitoring. → Watch dog time : 1000 (ms)</p> <p>(2) Parameter to process data interface: Do not change default setting. Default setting: A) Address Mode : Byte address B) Storage Format (Word Module): Big Endian</p> <p>(3) Handshake of the process data - Select 'Buffered, host controlled'</p> |
| | |
| | |

| Step | Description |
|------|---|
| 4 | <p>Bus parameter setting: Settings → Bus Parameters</p>  <p>► To change Communication Speed and MAC ID Master</p>  <ol style="list-style-type: none"> 1) Baudrate: Among 125, 250, 500 KBits/s 2) MAC ID Master: Among 0 ~ 63 3) Auto clear mode <ol style="list-style-type: none"> (1) When Auto clear mode is selected <ul style="list-style-type: none"> → If the error is occurred in slave module, All communication is stopped. → Dnet I/F module's HS LED flickering, MNS LED Red ON (2) When Auto clear mode is not selected <ul style="list-style-type: none"> → If the error is occurred in slave module, the communication of normal slave module is continued. |

| Step | Description |
|------|---|
| 5 | <p>Serial port selection: Settings → Device Assignment → Select the disconnected Port in COM Port of computer.</p>  |
| | <p>1) Initial screen before connection</p>  |
| | <p>2) Check COM Port connection → Check 'Connect COM 1, Connect COM 4'</p>  |
| | <p>3) Select connected Port</p>  |
| | |

| Step | Description |
|------|---|
| 6 | <p>Automatic Network setting: Online → Automatic Network Scan → Configured slave system information is automatically scanned.</p> <p>Online</p>  <p>1) Initial screen before Scan</p>  <p>2) Screen after Scan</p>  |

| <p>After scan, 'Ready' is displayed at Current Status.</p> <p>→ Select Automatic Configuration.</p> <p>Check the using of scanned information.</p> <p>→ Select OK.</p> | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| |  | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

| Step | Description |
|------|---|
| 6 | <p>After Automatic Configuration completed</p>  <p>→ It displays the configured slave module.</p> |
| 7 | <p>System configuration download: Select Online → Download</p>  <p>→ Download window is disappeared after downloading.</p> |
| 8 | <p>Save edited configuration file: Select File → Save or Save As</p> |

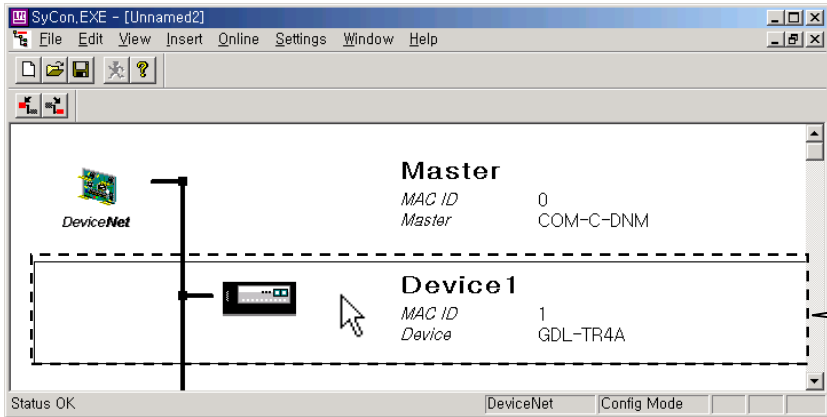

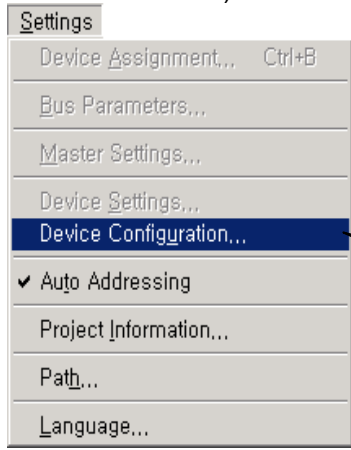

If the above 8 phases is finished, High-speed link setting is available after [SyCon Upload] at XG-PD. (**Online** → **SyCon Upload**)

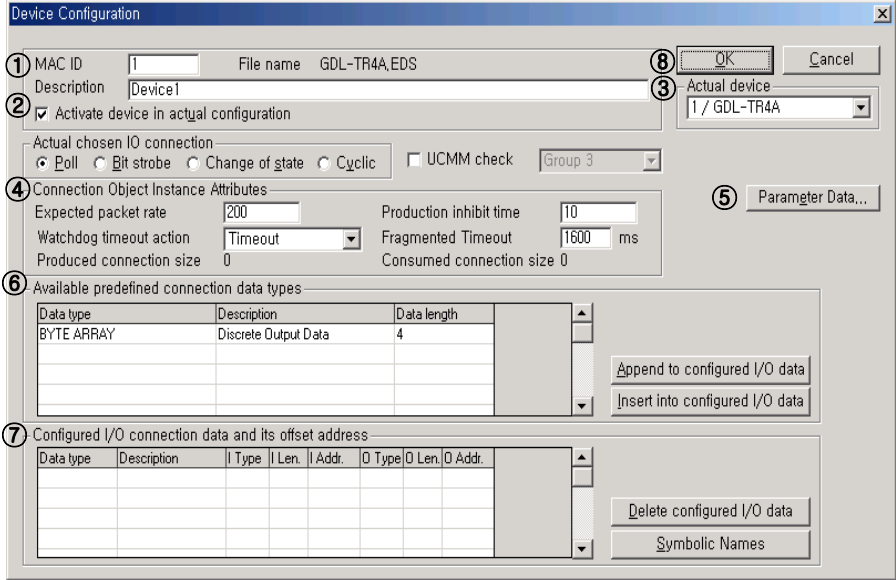

Chapter 5 SyCon Settings

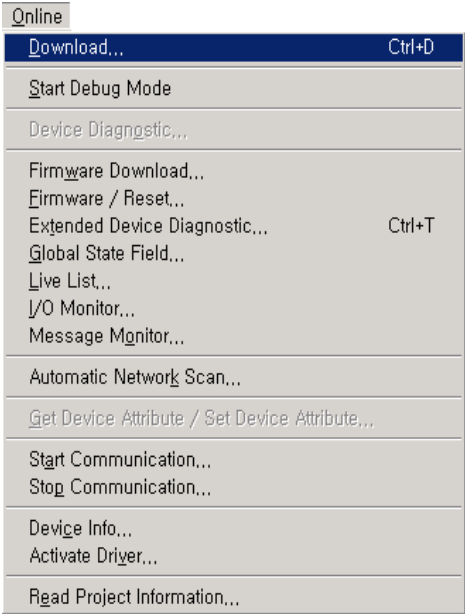

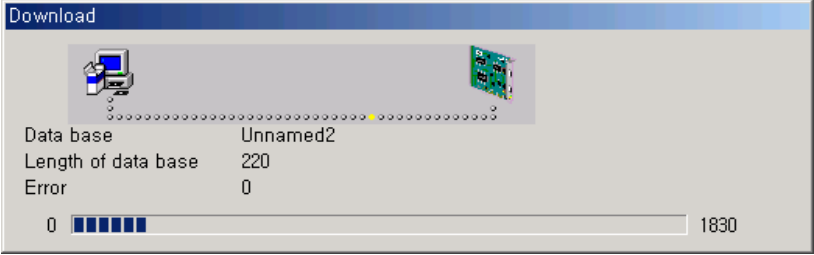

6) Slave module setting (Manual setting)

Slave module setting is available on the editor. Select slave module to edit.

(1) Setting sequence

| Step | Description |
|------|--|
| 1 | <p>Select Slave in editor window</p>  <p>The screenshot shows the SyCon.EXE interface. On the left, a 'DeviceNet' icon is connected to a vertical line. To the right of this line, there are two device entries. The top entry is 'Master' with 'MAC ID 0' and 'COM-C-DNM'. The bottom entry is 'Device 1' with 'MAC ID 1' and 'GDL-TR4A'. A dashed rectangular box surrounds the 'Device 1' entry. A mouse cursor is pointing at the 'Device 1' entry. A callout bubble with the text 'Select slave' points to the dashed box.</p> |
| 2 | <p>Slave setting: 1) Select Settings → Device Configuration 2) Select the slave in editor window and Click the mouse</p>  <p>The screenshot shows the 'Settings' menu open. The menu items are: 'Device Assignment...', 'Bus Parameters...', 'Master Settings...', 'Device Settings...', 'Device Configuration...', 'Auto Addressing' (checked), 'Project Information...', 'Path...', and 'Language...'. The 'Device Configuration...' item is highlighted in blue. A callout bubble with the text 'Select' points to this item.</p> |

| Step | Description | |
|------|--|---|
| 3 | Editing of Slave setting parameter  | |
| | ① | MAC ID & Description |
| | ② | Actual chosen IO connection |
| | ③ | Actual device |
| | ④ | Connection Object Instance Attributes |
| | ⑤ | Parameter Data |
| | ⑥ | Available predefined connection data types |
| | ⑦ | Configured I/O connection data and its offset address |
| | ⑧ | OK |

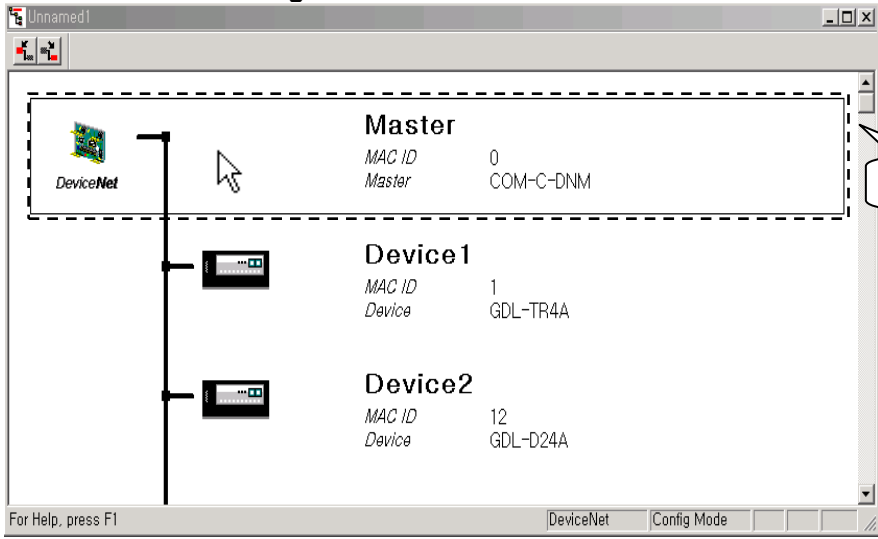

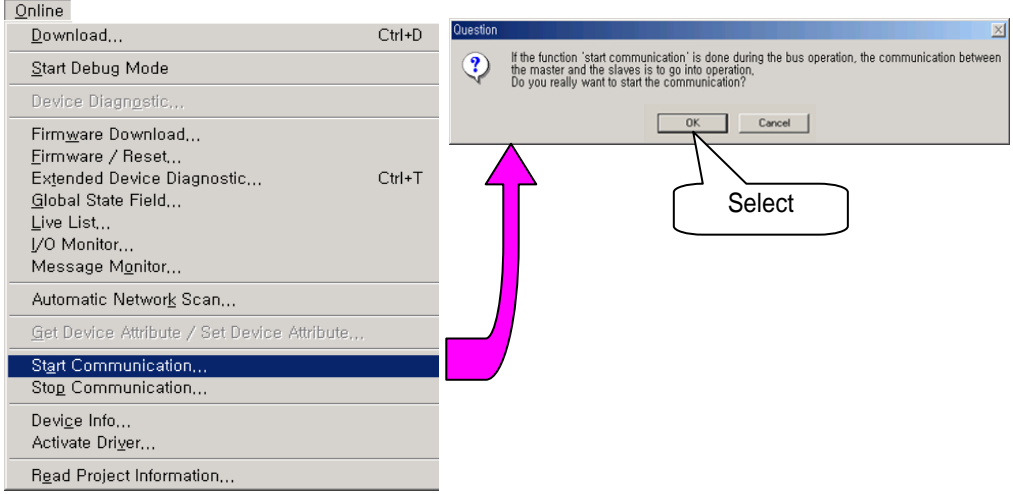

| Step | Description |
|------|---|
| 4 | <p>System configuration download: Online → Download</p> <p>→ Master must be selected when Download menu is executed.</p>  <p>Download</p>  <p>→ Download window is disappeared when download is completed.</p> |
| 5 | <p>Save edited system configuration file: File → Save or Save As</p> |

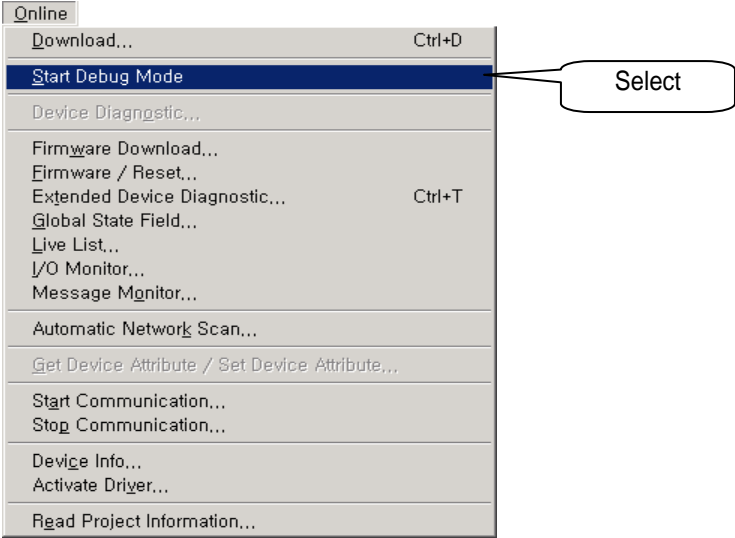

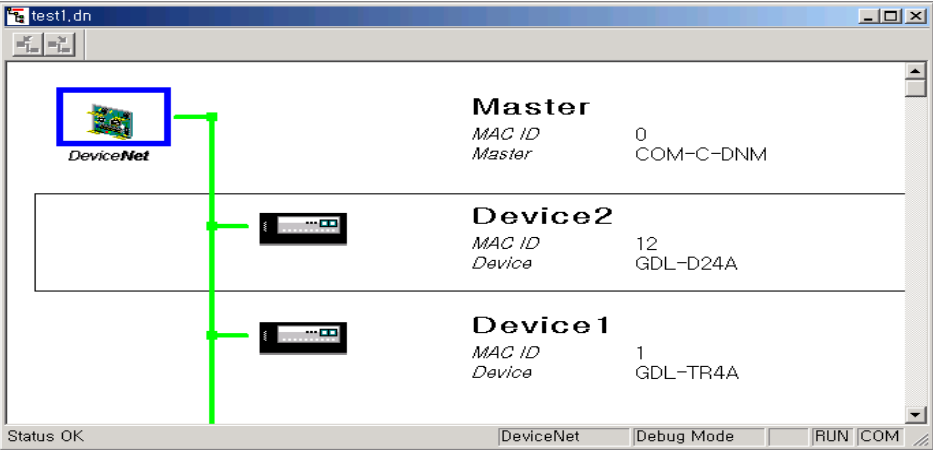

Chapter 5 SyCon Settings

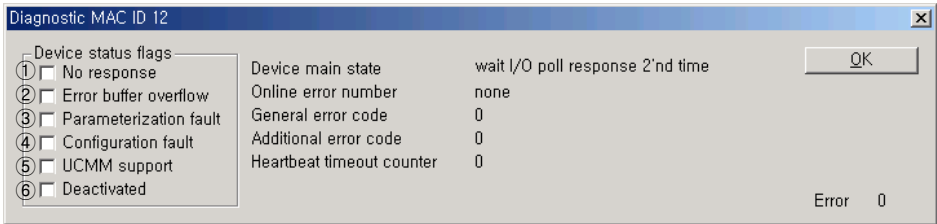

7) Diagnosis

- ▶ To diagnose
 - It is possible to diagnose that the downloaded file exists at the same editing window.
 - It is possible to diagnose when master is selected in editing window.
 - To diagnose, above 2 conditions have to satisfy.
- ▶ It can confirm the station number, module type, communication speed, communication method and wire diagram through diagnosis.

(1) Setting Sequence

| Step | Description |
|------|--|
| 1 | Open the file which is downloaded in Dnet I/F master module in editing window → It is possible to diagnose that the downloaded file exists at the same editing window. |
| 2 | Select master in editing window  |
| 3 | Start communication: Online → Start Communication  |

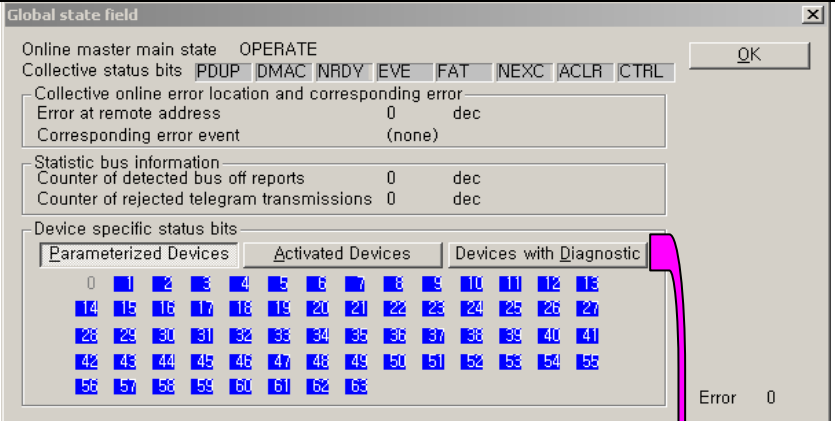

| Step | Description |
|------|--|
| | <p>Debug Mode : Select Online → Start Debug Mode</p> <div></div> |
| 4 | <p>The wire diagram is changed after debug mode started.</p> <ol style="list-style-type: none">1) If normal status, wire diagram is displayed green color.2) If abnormal status, wire diagram is displayed red color. <div></div> |

| Step | Description | | | | | | | | | | | | | | | | | | | | | |
|------|--|---|-------------|-------------|---|-------------|--|---|-----------------------|--|---|------------------------|--|---|---------------------|---|---|--------------|---------------------------------|---|-------------|----------------------------------|
| 4 | <p>To check the slave module status, select and click the applicable slave module. The setting window is appeared as shown below.</p> <div></div> | | | | | | | | | | | | | | | | | | | | | |
| | <p>Device status flags menu is checked by slave module status.</p> | | | | | | | | | | | | | | | | | | | | | |
| | <table><tr><th>No.</th><th>Item</th><th>Description</th></tr><tr><td>①</td><td>No response</td><td>Specified slave module is not existed in network. | ⑥ | Deactivated | Slave module status is abnormal. | | | | | | | | | | | | | | | | | | | | |
| | | | | | | | | | | | | | | | | | | | | | | |

5.4 Monitoring Information in SyCon

It monitors variable status information of communicating network.

1) Global State Field

| Menu | Description |
|--------------------------------------|--|
| Sequence | Online → Global State Field... |
| Online |  |
| Download... Ctrl+D | |
| Start Debug Mode | |
| Device Diagnostic... | |
| Firmware Download... | |
| Firmware / Reset... | |
| Extended Device Diagnostic... Ctrl+T | |
| Global State Field... | Select |
| Live List... | |
| I/O Monitor... | |
| Message Monitor... | |
| Automatic Network Scan... | |
| Get Device Attribute... | |
| Set Device Attribute... | |
| Start Communication... | |
| Stop Communication... | |
| Device Info... | |
| Activate Driver... | |
| Read Project Information... | |

Global State Field's description is as shown below.

| Classification | Description | |
|--|--|--|
| Online master main state | OPERATE | Master module is operating. |
| | STOP | Communication part of Master module is not operation. |
| Collective status bits | PDUP | Device executes the duplicated MAC ID checking. |
| | DMAC | Duplicated MAC ID module is existed. |
| | NRDY | The communication of main program is not ready. |
| | EVE | Transmission error |
| | FAT | Communication can not available because of fatal error. |
| | NEXC | The at least 1 device can not reach Data Exchange State. |
| | ACLR | All devices stop the communication and are cleared automatically. |
| | CTRL | Master parameter error |
| Collective online error location and corresponding error | Error at remote address | Error address displayed |
| | corresponding error event | Error event displayed |
| Statistic bus information | Counter of detected bus off report | Counting the number of Bus off |
| | Counter of rejected telegram transmissions | Counting the rejected telegram transmissions |
| Device specific status bits | Parameterized Devices | Display of parameterized slave module (Blue) |
| | Activated Devices | Display of activating slave module (Yellowish green) -The yellowish green is disappeared when slave module has the error. |
| | Devices with Diagnostic | Display of activating slave module (Red) -The diagnosis window is appeared when red color station is double-clicked. → Refer to 7) Diagnosis's 4 step. |

2) Live List

| Menu | Description | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
|---|---|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|
| Sequence | Online → Live List | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

| | <p>Devices: It displays slave station number.</p> <p>1) Activation: It displays normal communicating slave module.</p> <p>2) Inactivation: It displays abnormal communicating slave module.</p> | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

Chapter 6 High-speed Link Setting

6.1 Introduction

High-speed link specifies the Send/Receive device area and data size between CPU module and the communication module by XG-PD.

High-speed link can be set the function as shown below.

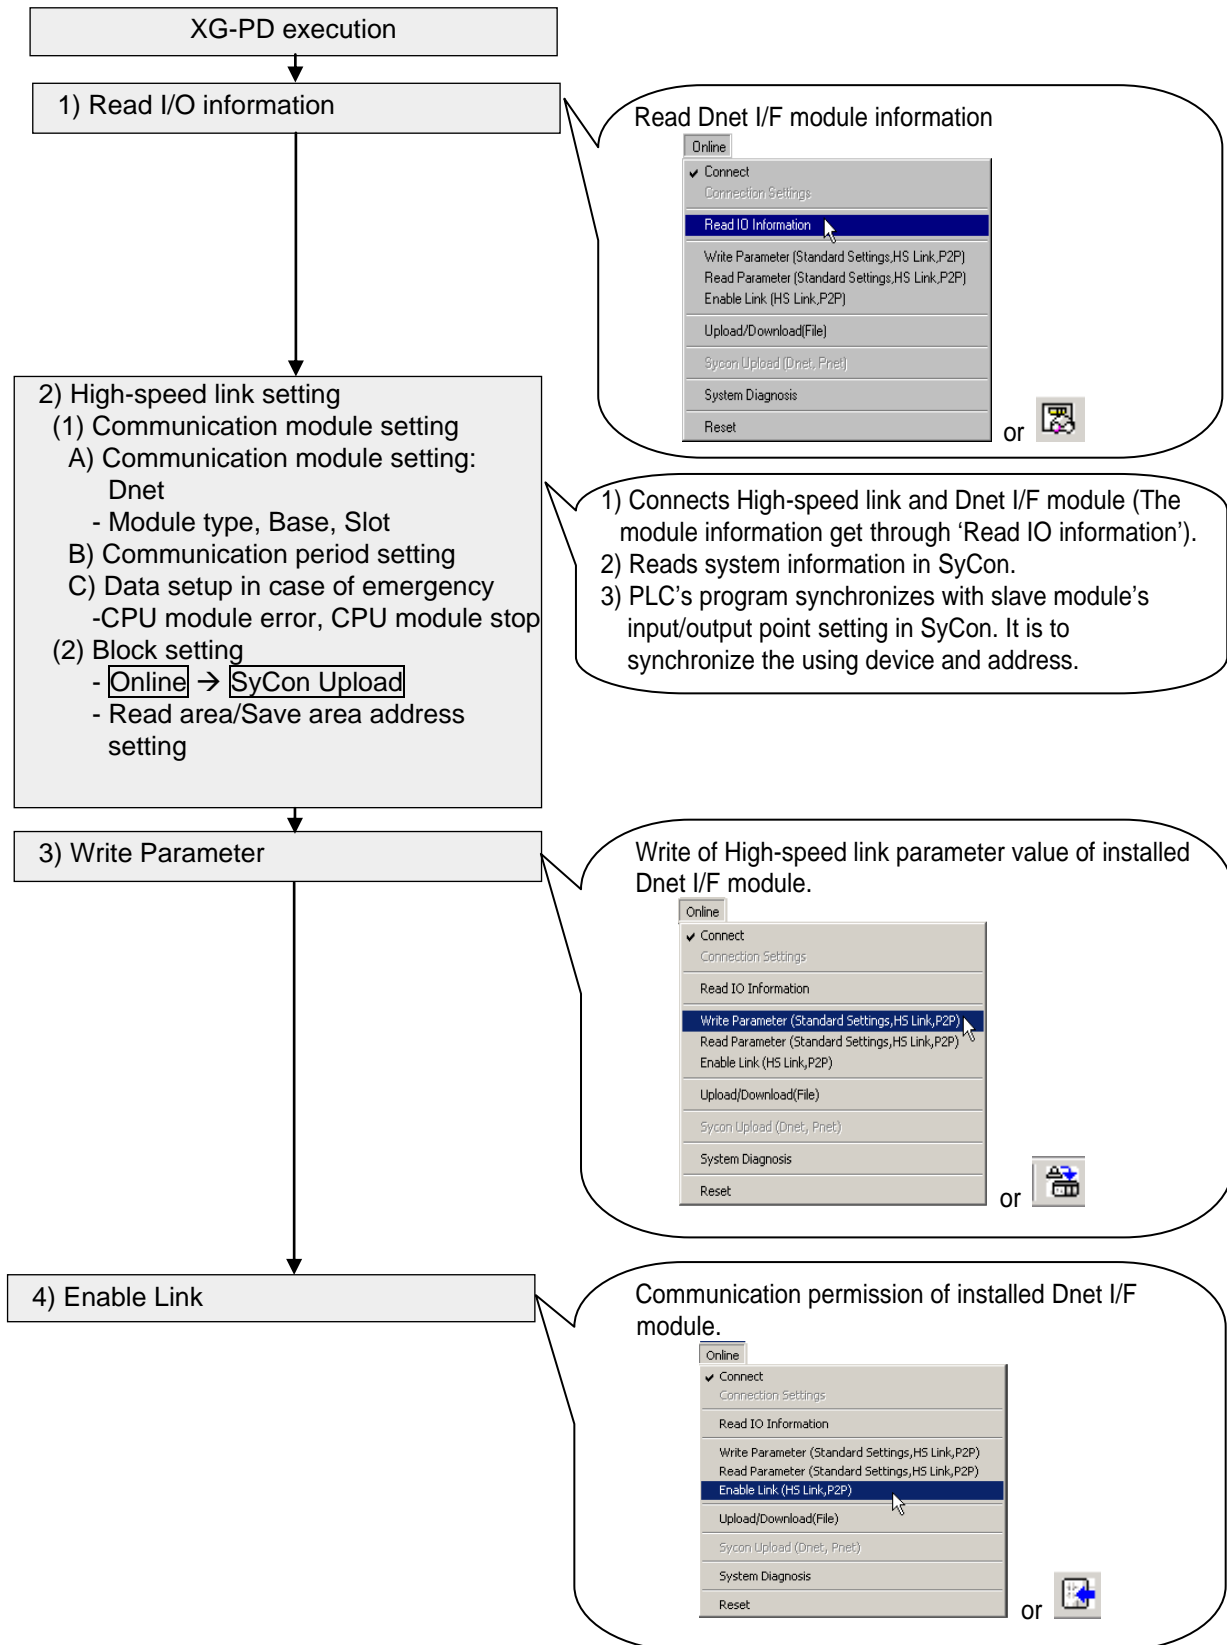

| Description | | High-speed Link | | |
|-----------------------------------|--|---|---|----------------------------------|
| Communication module setting | Communication module setting | Module type | Dnet | |
| | | Base no. | Max.: 0 ~ 7 Setting range is different from CPU module. | |
| | | Slot no. | Max.: 0 ~ 11 Setting range is different from Base type. | |
| | Communication period setting (Period type) | Select among 10ms, 20ms, 50ms, 100ms, 200ms, 500ms, 1s, 5s, 10s. - Default setting: 10 ms | | |
| | Output data setup in case of emergency | CPU error | Latch | Keep the previous output status. |
| | | | Clear | Clear the output. |
| | | CPU stop | Latch | Keep the previous output status. |
| | | | Clear | Clear the output. |
| | Mode *1 | Send : the data transfer from master module to slave module Receive : the data transfer from slave module to master module | | |
| | Station No. *1 | Slave station number (Range: 0 ~ 63) | | |
| | Communication Method *1 | The communication method between master and slave(Poll, Bit-Strobe, COS, Cyclic) | | |
| | Read area (From Master to Slave module) | Address | Head address of the sending device Usable device: P, M, K, F, T, C, U, Z, L, N, D, R, ZR | |
| | | Size *1 (Byte) | Input/Output point of slave module is displayed Byte. - If input /Output module is less than 8 bit, it is processed 1 Byte. | |
| | Save area (From Slave to Master module) | Address | Head address of the receiving device Usable device: P, M, K, F, T, C, U, Z, L, N, D, R, ZR | |
| | | Size *1 (Byte) | Input/Output point of slave module is displayed in Byte. - If input/Output module is less than 8 bit, it is dealt with 1 Byte. | |
| PLC connection | | RS-232C or USB Port of CPU module | | |
| Control condition | | It can control regardless of position of Run mode switch (Run, Stop) of CPU module. | | |
| Max. communication point | | Transmission 28672 points, Reception 28672 points, Respectively 3584 Bytes | | |
| Max. block number | | 63 (Setting Range : 0~62) | | |
| Max. point per block | | 256 Byte (2,048 point) (Setting range 1 ~ 256) | | |
| Number of High-speed link setting | | Up to 12 | | |

Note

- *1 : 1) It can not set in XG-PD.
 - 2) It displays the uploaded data from SyCon to XG-PD.
 - 3) The setting sequence is from 1 phase to 2 phase.
 - 1 phase: Parameter setting in SyCon→Download
 - 2 phase: XG-PD →Read I/O information → SyCon upload → High-speed link parameter setting
→ Download the parameter → High-speed link permission
- Setting value can be changed according to the changing phases (2 phase → 1 phase).
- ▶ When High-speed link is edited, parameter has to download again.
 - ▶ High-speed link is used per a communication module.
 - ▶ CPU module saves the written parameter (Standard, High-speed link, P2P).
- When CPU module is exchanged, parameter in XG-PD has to back-up and then the parameter has to write in CPU module again.

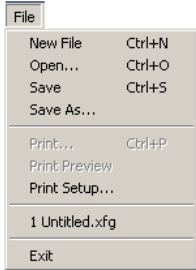

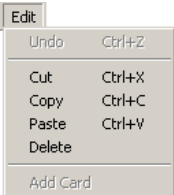

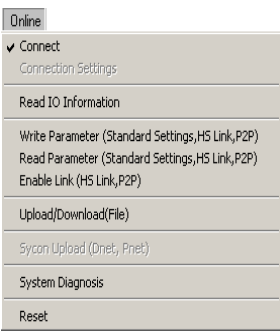

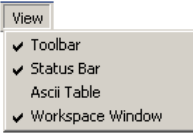

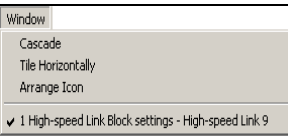

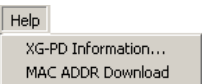

6.2 How to use XG-PD

XG-PD usage for Dnet I/F module is as shown below.

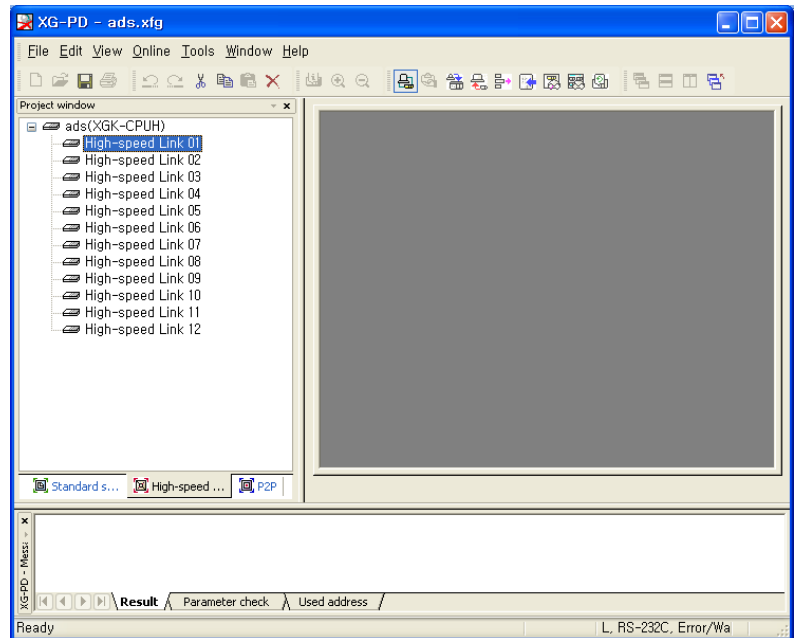

Chapter 6 High-speed Link Setting

* Relation of Menubar and shortcut

| Menubar | Menu | Icon | Descriptions |
|---|---|---|--|
|  | New file |  | Create a new file. |
| | Open |  | Open an exiting file. |
| | Save |  | Save the file. |
| | Save As | - | Name and save the file. |
| | Print |  | Print data. |
| | Preview | - | Preview the data. |
| | Print Setup | - | Change the printer settings. |
|  | Undo | - | Not used. |
| | Cut |  | Delete an existing content and pastes that another part. |
| | Copy |  | Copy the data in a file. |
| | Paste |  | Paste the data in a file. |
| | Delete |  | Delete the data in a file. |
| | Add Card | - | Not used. |
|  | Connect |  | Connects PLC with a computer. |
| | Connection settings |  | Connection settings between PLC and the computer. |
| | Read IO information |  | Read the information of PLC. |
| | Write Parameter |  | Write parameter to PLC from XG-PD. |
| | Read Parameter |  | Read parameter from PLC to XG-PD. |
| | Enable Link |  | Enabling the module to communicate via High-speed link or P2P communication. |
| | Upload/Download (File) | - | Not used. |
| | SyCon Upload | | Read the data in SyCon. |
| | System Diagnosis |  | Monitoring of communication module's Run status. |
| | Reset |  | Reset the PLC. |
| Option |  | PLC Type Settings | - Set the type of CPU module. |
| View |  | Toolbar | - Activate the Toolbar. |
| | | Status Bar | - Display the Status Bar. |
| | | Ascii Table | - Display the ASCII and Hexadecimal value. |
| | | Workspace Window | - Open/Close the parameter window. |
| Window |  | Tile Horizontally | - Tile the windows horizontally. |
| | | Cascade | - Cascade windows. |
| | | Arrange Icon | - Not used. |
| Help |  | XG-PD information |  Check the XG-PD version information. |
| | | MAC ADDR Download | - Not used. |

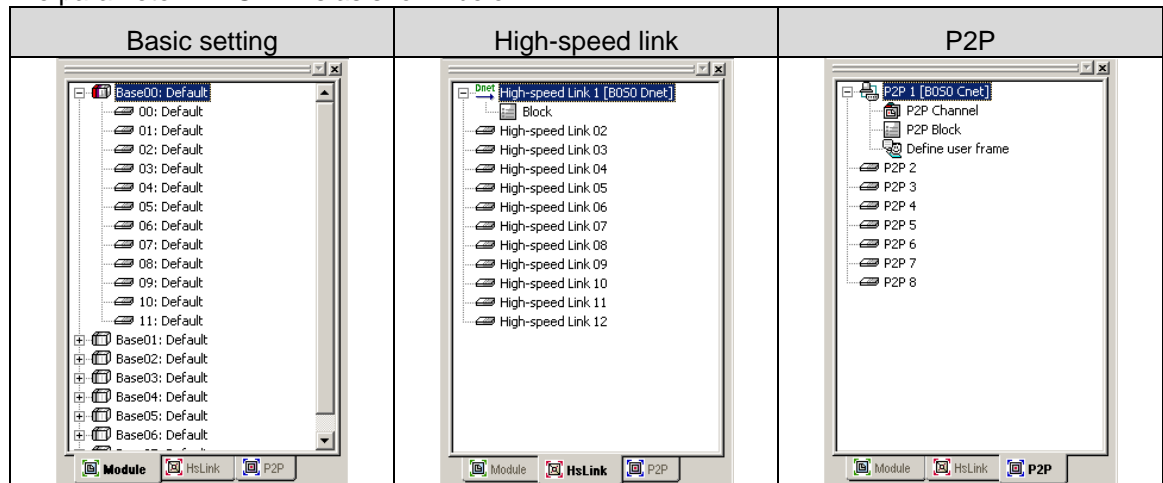

6.3 High-speed Link Editing

XG-PD is executed as shown below.

[Standard window]

The parameter in XG-PD is as shown below.

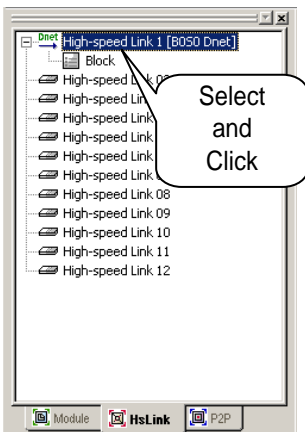

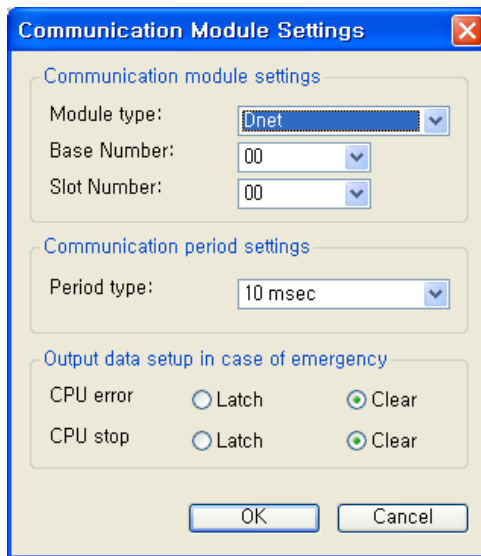

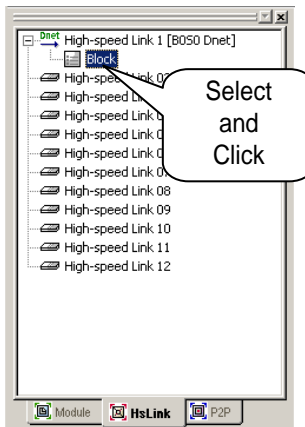

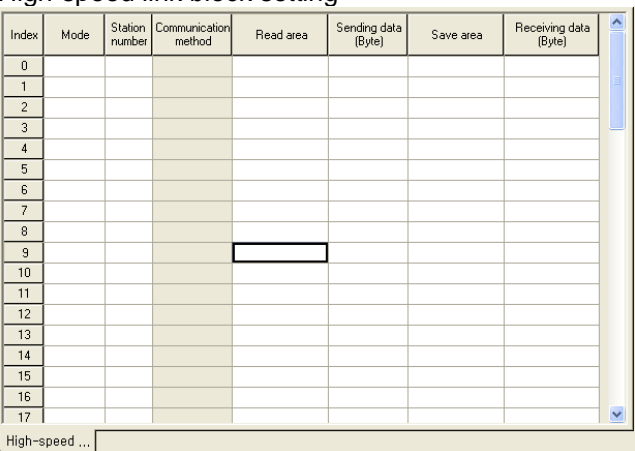

[Parameter window]

Dnet I/F module is set in High-speed link window. It can use the High-speed link up to maximum 12.
A High-speed link is available per a Dnet I/F module.

Chapter 6 High-speed Link Setting

1) How to use High-speed link window

Parameter is specified at High-speed link window as shown below. There are 2 kinds of parameter setting, Communication module setting and High-speed link block setting.

| High-speed link | Parameter setting |
|---|---|
|  | <p>Communication module setting</p>  |
|  | <p>High-speed link block setting</p>  |

Remark

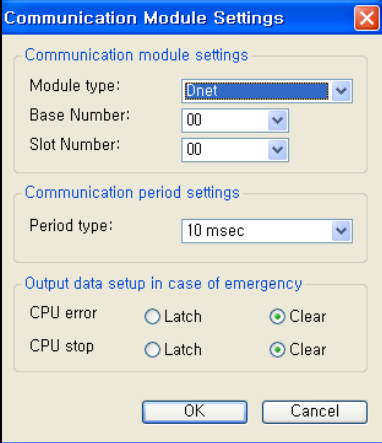

High-speed link1 [B0S0 Dnet] is as shown below.

- 1) High-speed link1: It is a serial number of High-speed link.
- 2) B0: It means Base number. (Example: Expansion base 2 stage - B2, Expansion base 5 stage - B5)
- 3) S0: It means Slot number. (Example: Slot number 5 - S5, Slot number 11 - S11)

Chapter 6 High-speed Link Setting

2) Communication module setting parameter

Communication module parameter setting is as shown below.

| Parameter | Setting item | | Description | |
|--|--|--------------|--|---|
|  | Communi- cation module setting | Module type | Dnet | |
| | | Base No. | Setting range: 0 ~ 7 It is different from CPU module. | |
| | | Slot No. | Setting range: 0 ~ 11 It is different from type of base. | |
| | Communication period setting (Period type) | | Select among the 10ms, 20ms, 50ms, 100ms, 200ms, 500ms, 1s, 5s, 10s. - Default: 10ms - It is only for transmission data. - Received data is processed every end of program. | |
| | Output data setup in case of emergency | CPU error | Latch | Keep the output status. (But, P device's data is cleared.) |
| | | | Clear | Clear all of the output. |
| | | CPU stop | Latch | Keep the output status. (But, P device's data is cleared.) |
| | | | Clear | Clear all of the output. |

Remark

Cautions of communication period setting

- Setting value of communication period is applicable to transmission data (CPU module's data → Dnet I/F module). If communication period is longer than the time of changing data at scan program, It might be different from the data which is transmitted to slave module.

Chapter 6 High-speed Link Setting

3) Parameter of High-speed link block setting

High-speed link block setting parameter is as shown below.

(1) SyCon Upload

SyCon configuration must be uploaded before High-speed link block setting.

Upload way: Online → SyCon Upload (Dnet, Pnet)

| Classification | High-speed link block setting | | | | | | | |
|----------------|-------------------------------|--------------|----------------|----------------------|-----------|---------------------|-----------|-----------------------|
| Before Upload | Index | Mode | Station number | Communication method | Read area | Sending data (Byte) | Save area | Receiving data (Byte) |
| | 0 | | | | | | | |
| | 1 | | | | | | | |
| | 2 | | | | | | | |
| | 3 | | | | | | | |
| | 4 | | | | | | | |
| | 5 | | | | | | | |
| | 6 | | | | | | | |
| | 7 | | | | | | | |
| | 8 | | | | | | | |
| | 9 | | | | | | | |
| | 10 | | | | | | | |
| | 11 | | | | | | | |
| | 12 | | | | | | | |
| | 13 | | | | | | | |
| | 14 | | | | | | | |
| | 15 | | | | | | | |
| | 16 | | | | | | | |
| | 17 | | | | | | | |
| After Upload | Index | Mode | Station number | Communication method | Read area | Sending data (Byte) | Save area | Receiving data (Byte) |
| | 0 | Send | 1 | Poll | | 4 | | |
| | 1 | Receive | 2 | Poll | | | | 4 |
| | 2 | Send/Receive | 3 | Poll | | 2 | | 2 |
| | 3 | | | | | | | |
| | 4 | | | | | | | |
| | 5 | | | | | | | |
| | 6 | | | | | | | |
| | 7 | | | | | | | |
| | 8 | | | | | | | |
| | 9 | | | | | | | |
| | 10 | | | | | | | |
| | 11 | | | | | | | |

After upload the data, information in SyCon is displayed in High-speed link window.

The uploaded information is as shown below.

| Item | Description |
|----------------------|--|
| Index | Arrange starting from the lowest station number in SyCon. |
| Station No. | Station number of slave module in network. |
| Communication method | Display communication setting among the communication methods (Poll, Bit-Strobe, Cyclic, COS). |
| Read area | Head address of transmitting device from master module to slave module. |
| Transmission data | Size of slave module (Byte). |
| Save area | Head address of receiving device from slave module to master module. |
| Reception data | Size of slave module (Byte). |

The uploaded information in SyCon is not able to edit in XG-PD. In case of monitoring, SyCon has to upload again.

Chapter 6 High-speed Link Setting

(2) High-speed link block editing

Head address of Send/Receive address can be edited in High-speed block.

Select index to edit and please set Read area & Save area.

| Classification | Description | | | | | | | |
|---|---|---|--|-------------------------|-----------|------------------------|-----------|--------------------------|
| Screen After uploaded the data | Index | Mode | Station number | Communication method | Read area | Sending data (Byte) | Save area | Receiving data (Byte) |
| | 0 | Send | 1 | Poll | D00100 | 4 | | |
| | 1 | Receive | 2 | Poll | | | M0000 | 4 |
| | 2 | Send/Receive | 3 | Poll | D00120 | 2 | M0010 | 2 |
| | 3 | | | | | | | |
| | 4 | | | | | | | |
| | 5 | | | | | | | |
| | 6 | | | | | | | |
| | 7 | | | | | | | |
| | 8 | | | | | | | |
| | 9 | | | | | | | |
| | 10 | | | | | | | |
| | 11 | | | | | | | |
| | 12 | | | | | | | |
| High-speed ... | | | | | | | | |
| High- speed link block editing window | Classification | Description | | | | | | |
| | Station type *1 | Select slave. | | | | | | |
| | Block type *1 | Transmission: Data is transmitted from master module to slave module. Reception: Data is transmitted from slave module to master module. | | | | | | |
| | Station No. *1 | Slave station number (range: 0 ~ 63) | | | | | | |
| | Block No. *1 | Not used in Dnet I/F module. | | | | | | |
| | Read area (Master module → Slave module) | Address | Head address of transmitting device. Usable device: P, M, K, F, T, C, U, Z, L, N, D, R, ZR | | | | | |
| | | Size *1 (Byte) | Input/Output point of slave module is displayed in Byte. - If input module point is less than 8 bit, it is dealt with 1 Byte. | | | | | |
| | Save area (Slave module → Master module) | Address | Head address of receiving device. Usable device: P, M, K, F, T, C, U, Z, L, N, D, R, ZR | | | | | |
| | | Size *1 (Byte) | Input/Output point of slave module is displayed in Byte. - If input module point is less than 8 bit, it is dealt with 1 Byte. | | | | | |

The priority order of data is the slave module which has lowest station number.

Remark

Unit of address setting is Word. But slave module's unit size is Byte. Less than 8 point module is processed by 1 Word when address is specified.

Chapter 6 High-speed Link Setting

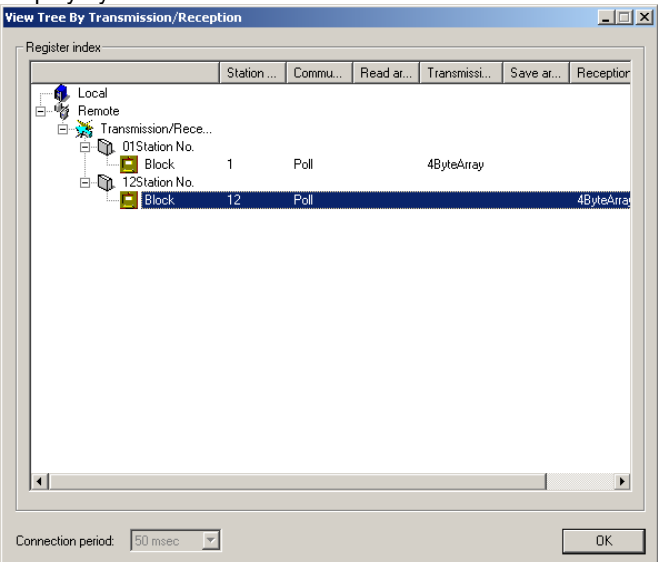

(3) How to use High-speed link block editing tool

The editing tool and usage of High-speed link block is as shown below.

| Index | Mode | Station number | Communication method | Read area | Sending data (Byte) | Save area | Receiving data (Byte) |
|-------|--------------|----------------|----------------------|-----------|---------------------|-----------|-----------------------|
| 0 | Send | 1 | Poll | D00100 | 4 | | |
| 1 | Receive | 2 | Poll | | | M0000 | 4 |
| 2 | Send/Receive | 3 | Poll | D00120 | 2 | M0010 | 2 |
| 3 | | | | | | | |
| 4 | | | | | | | |
| 5 | | | | | | | |
| 6 | | | | | | | |
| 7 | | | | | | | |
| 8 | | | | | | | |
| 9 | | | | | | | |
| 10 | | | | | | | |
| 11 | | | | | | | |
| 12 | | | | | | | |

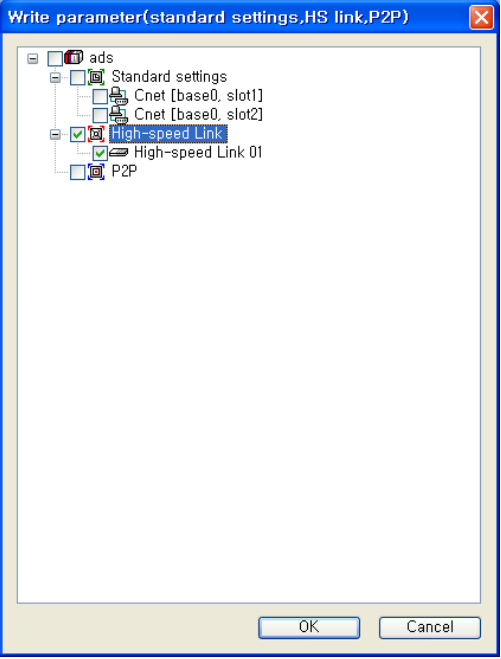

Screen 1: Right mouse (right click) button of a selected

High-speed ...

| | | |
|--|-------------------------------------|--|
| Edit Block Copy Block Paste Block Delete Block Lump Setup View Tree By Transmission/Reception | Edit Block | Changes the edited index block. |
| | Copy Block | Copies the edited index block. |
| | Paste Block | Pastes the copied index block. |
| | Delete Block | Deletes the edited index block. |
| | Lump Setup | Read/Save area is specified in a lump when the slave module's data size is regular. |
| | Insert Block | Inserts the index block. |
| [Screen 1] | View Tree by Transmission/Reception | Display by Tree structure.  |

6.4 Read and Write of High-speed Link

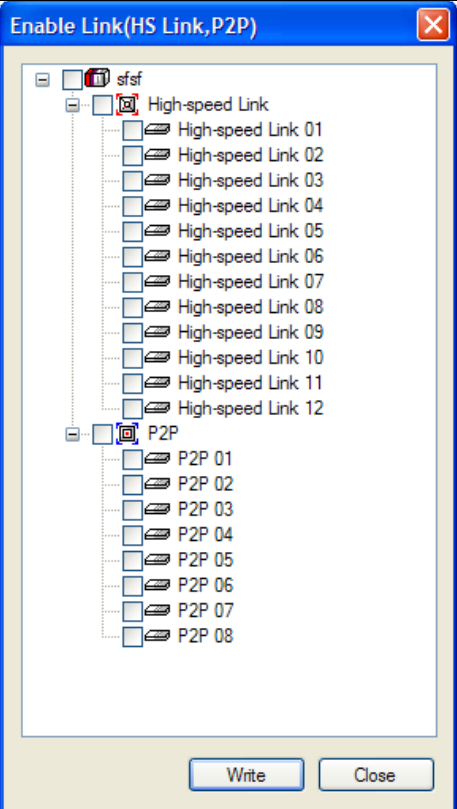

The screen is used for read/write of High-speed link's parameter.

| Configuration | Description |
|--|--|
|  | <p>1) High-speed link is available up to 12 for installed Dnet I/F module.</p> <ul style="list-style-type: none">- It can be used up to 12 with the other communication module which use High-speed link. <p>2) It can read/write for each High-speed parameter.</p> <ul style="list-style-type: none">- Check the box to set the High-speed link. <p>3) Read/Write of High-speed link parameter not affect to CPU's Run mode.</p> |

If High-speed link parameter is written to CPU module, CPU module saves the data. If CPU module is exchanged, High-speed link parameter has to backup from CPU module. The parameter has to re-write in exchanged CPU module.

6.5 Enable Link

You need to enable the link for actual data communication of the downloaded HS link data.

| Configuration | Description |
|--|---|
|  | <ol style="list-style-type: none">1) Select “Online” → “Enable Link” on the menu. Then, “Enable Link” screen appears.2) Check the item you want to enable and click “Write”. |

Chapter 6 High-speed Link Setting

* Enable Link through flag

It describes "Enable Link" method through flag. The following XG5000 version, CPU OS version is needed.

| Item | Version |
|---------|----------------|
| XG5000 | V3.61 or above |
| XGR CPU | V1.91 or above |
| XGI CPU | V3.4 or above |
| XGK CPU | V3.7 or above |

Flag list related with "Enable Link"

-XGR

| Flag | Data type | Device | Description |
|-------------------|----------------------|----------|--------------------------------------|
| _HS_ENABLE_STATE | ARRAY[0..11] OF BOOL | %FX19040 | HS link enable/disable current state |
| _HS_REQ | ARRAY[0..11] OF BOOL | %FX31520 | HS link enable/disable request |
| _HS_REQ_NUM | ARRAY[0..11] OF BOOL | %FX31536 | HS link enable/disable setting |
| _P2P_ENABLE_STATE | ARRAY[0..7] OF BOOL | %FX19072 | P2P enable/disable current state |
| _P2P_REQ | ARRAY[0..7] OF BOOL | %FX31552 | P2P enable/disable request |
| _P2P_REQ_NUM | ARRAY[0..7] OF BOOL | %FX31568 | P2P enable/disable setting |

-XGI

| Flag | Data type | Device | Description |
|-------------------|----------------------|----------|--------------------------------------|
| _HS_ENABLE_STATE | ARRAY[0..11] OF BOOL | %FX15840 | HS link enable/disable current state |
| _HS_REQ | ARRAY[0..11] OF BOOL | %FX16480 | HS link enable/disable request |
| _HS_REQ_NUM | ARRAY[0..11] OF BOOL | %FX16496 | HS link enable/disable setting |
| _P2P_ENABLE_STATE | ARRAY[0..7] OF BOOL | %FX15872 | P2P enable/disable current state |
| _P2P_REQ | ARRAY[0..7] OF BOOL | %FX16512 | P2P enable/disable request |
| _P2P_REQ_NUM | ARRAY[0..7] OF BOOL | %FX16528 | P2P enable/disable setting |

-XGK

| Flag | Data type | Device | Description |
|--------------------|-----------|--------|---|
| _HS1_ENABLE_STATE | BIT | F09600 | HS link 1 enable/disable current state |
| _HS2_ENABLE_STATE | BIT | F09601 | HS link 2 enable/disable current state |
| _HS3_ENABLE_STATE | BIT | F09602 | HS link 3 enable/disable current state |
| _HS4_ENABLE_STATE | BIT | F09603 | HS link 4 enable/disable current state |

| _P2P7_REQ_NUM | BIT | F10336 | P2P7 enable/disable setting |
| _P2P8_REQ_NUM | BIT | F10337 | P2P8 enable/disable setting |

- ▶ How to enable link
 - HS link/P2P enable/disable setting flag ON → HS link/P2P enable/disable request flag ON
- ▶ How to disable link
 - HS link/P2P enable/disable setting flag OFF → HS link/P2P enable/disable request flag ON
- ▶ You can monitor the Enable/Disable state of the each link through “enable/disable current states” flag.

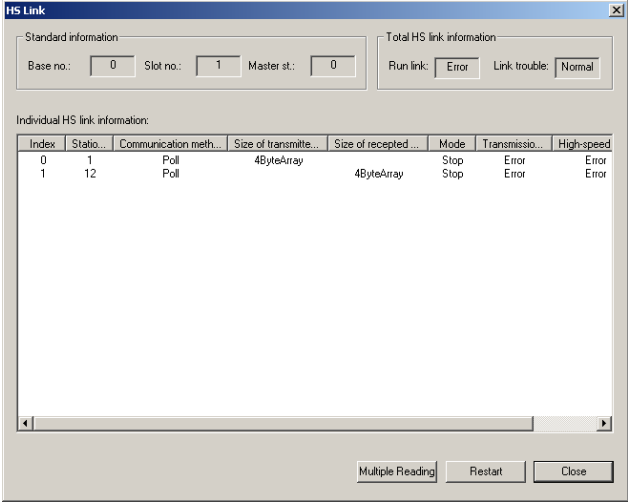

6.6 System Diagnosis

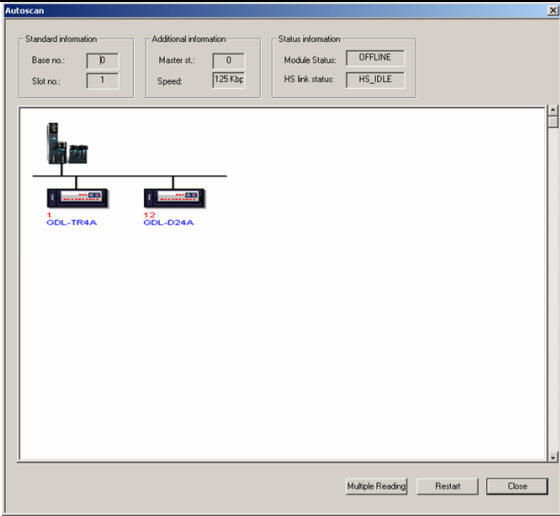

System diagnosis provides the information of Dnet I/F module system. The System diagnosis screen is as shown below.

It describes the menu of system diagnosis.

| Menu | | Screen configuration and description | | |
|----------------------------------|-------------------------------|--------------------------------------|------------------|--|
| Communication module information | | Standard information | Module Kind | Communication module type. |
| | | | Base number | Base number of communication module which is connected with High-speed link. |
| | | | Slot number | Slot number of communication module which is connected with High-speed link. |
| | Hardware/Software information | Hardware Error | Hardware Error | Hardware error of communication module. |
| | | | Hardware version | Hardware version of communication module. |
| | | OS Version | OS Version | Software version of communication module. |

| Menu | Screen configuration and description | | |
|----------------------------------|--|-------------------------------|--|
| HS (High-speed) link information |  | | |
| | Standard information | Base no. | Base number of communication module which is connected with High-speed link. |
| | | Slot no. | Slot number of communication module which is connected with High-speed link. |
| | | Master station | Station number of Dnet I/F module. |
| | Total HS link information | Run link | Normal: All slave modules communicate normally. |
| | | Link trouble | Error: Error is occurred in slave station after Run link becomes normal status. |
| | Individual HS link information | Index | Arrange starting from the lowest station number in SyCon. |
| | | Station number | Slave module's station number which is existed in network. |
| | | Communication method | Display communication setting among the communication methods (Poll, Bit-Strobe, Cyclic, COS). |
| | | Size of transmitted data | Data size of transmitting data from master module to slave module. |
| | | Size of received data | Data size of receiving data from master module to slave module. |
| | | Mode | RUN: Normal communication status between master and slave module. STOP: Abnormal communication status between master and slave module. |
| | | Transmission/Reception status | Display of communication status between master and slave module. |
| | | High-speed link status | Display of error occurring Transmission/Reception status or Error status. |
| | | Error | Error is displayed while High-speed link data is processed. |

| Menu | Screen configuration and description |
|----------|--|
| Autoscan | <div data-bbox="612 324 1174 837"></div> <p data-bbox="343 855 1165 891">Communication status of slave module is displayed as shown below.</p> <div data-bbox="375 936 742 974">1) Connected communication :</div> <div data-bbox="762 891 890 963"></div> <div data-bbox="375 1025 766 1064">2) Disconnected communication:</div> <div data-bbox="790 974 922 1048"></div> |

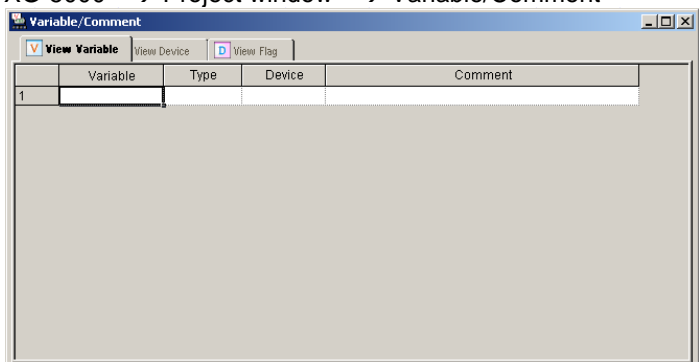

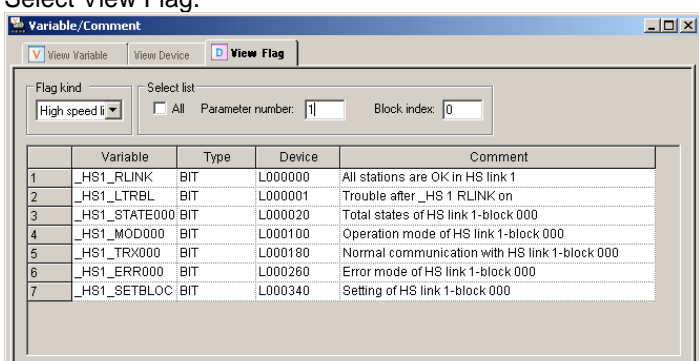

6.7 High-speed Link Information

High-speed link swaps the data between master module and all slave modules. It provides the flag of High-speed link operation status classified by individual station or total station. It is useful when checking the reliability of Transmission/Reception data and finding cause of error. Flag kinds and usage is as shown below.

| Classification | Run-Link | Link-Trouble | Transmission /Reception status | Operation mode | Error | High-speed link status |
|---|-----------|--------------|--------------------------------|-------------------------|-------------------------|---------------------------|
| Information type | All | | Respectively | | | |
| Flag name (x=High-speed link number) | _HSxRLINK | _HSxLTRBL | _HSxTRX[n] (n=0..63) | _HSxMOD[n] (n=0..63) | _HSxERR[n] (n=0..63) | _HSxSTATE[n] (n=0..63) |
| Data type | Bit | Bit | Bit Array | Bit Array | Bit Array | Bit Array |
| Monitoring | Available | Available | Availability | Availability | Availability | Availability |
| Program use | Available | Availability | Availability | Availability | Availability | Availability |

[Table] Function of High-speed link information

The way of selecting flag is as shown below.

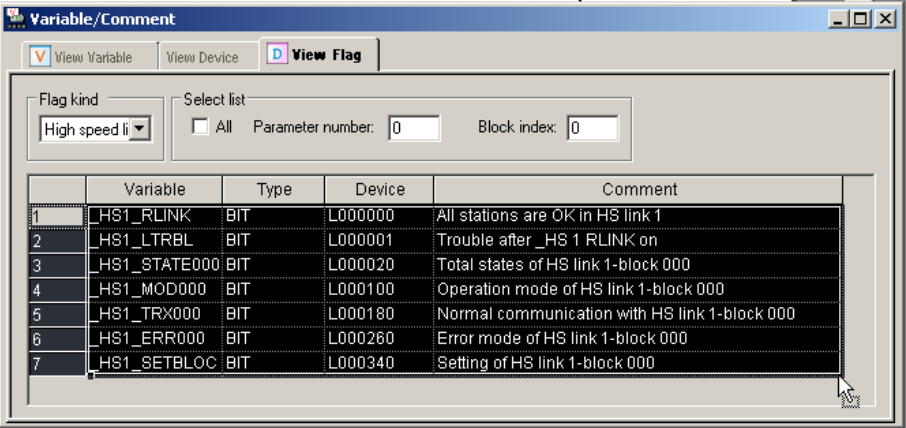

| | | | |
|------------------|---|--|---|
| Setting sequence | XG-5000 → Project window → Variable/Comment  | | |
| How to use | Select View Flag.  | | |
| | Flag kind | Select among the System/High-speed link/P2P/PID. | |
| | Select list | All | It is showed the list of all High-speed links. |
| | | Parameter number | It means High-speed link number. The selected number is only displayed in List. |
| | | Block index | It is index number of High-speed link block. |

Chapter 6 High-speed Link Setting

Monitoring of flag and device's value is as shown below.

Setting sequence

XG5000 → Project window → Variable/Comment

How to use

XG5000 → View → Variable Monitoring Window

| | PLC | Type | Device | Value | Variable | Comment |
|---|--------|------|---------|-------|---------------|---|
| 1 | NewPLC | BIT | L000000 | 10 | _HS1_RLINK | All stations are OK in HS link 1 |
| 2 | NewPLC | BIT | L000001 | 10 | _HS1_LTRBL | Trouble after _HS 1 RLINK on |
| 3 | NewPLC | BIT | L000020 | 10 | _HS1_STATE000 | Total states of HS link 1-block 000 |
| 4 | NewPLC | BIT | L000100 | 10 | _HS1_MOD000 | Operation mode of HS link 1-block 000 |
| 5 | NewPLC | BIT | L000180 | 10 | _HS1_TRX000 | Normal communication with HS link 1-block 000 |
| 6 | NewPLC | BIT | L000260 | 10 | _HS1_ERR000 | Error mode of HS link 1-block 000 |
| 7 | NewPLC | BIT | L000340 | 10 | _HS1_SETBLOCK | Setting of HS link 1-block 000 |
| 8 | | | | | | |

- Select variable in Variable/Comment screen and then Drag/Drop the variable to Variable Monitoring Window. The value is appeared in variable Monitoring Window.

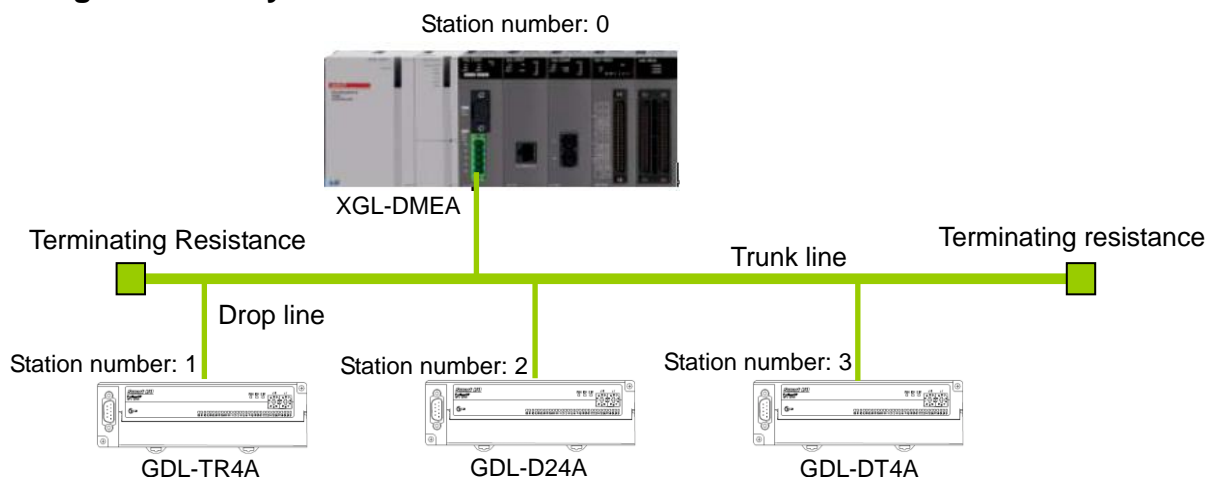

Chapter 7 Communication Program

7.1 Example Program

Basic configuration of example and setting value is as shown below.

| Classification | | | | Description | | Setting program | Setting phase |
|----------------------|---|------------------------------|----------------------|---|----------------------------|-----------------|---------------|
| System configuration | Master module | Master setting | | XGL-DMEA | | SyCon | 1-3 ~ 1-4 |
| | | Base number | | 0 | | XG-PD | 5-1 |
| | | Slot number | | 0 | | XG-PD | 5-1 |
| | | Station number | | 0 | | SyCon | 1-5, 3-1 |
| | | Communication speed | | 125kbps | | SyCon | 3-1 |
| | | High-speed link setting | | High-speed link 1 area | | XG-PD | 5-1 |
| | | Communication period setting | | 200ms | | XG-PD | 5-1 |
| | | Slave module | Slave type | | GDL-TR4A,GDL-D24A,GDL-DT4A | | SyCon |
| | GDL-TR4A (Output 32 points) | | Station no. | 1 | | SyCon | 4-3, 5-2 |
| | | | Communication method | Poll | | SyCon | 5-3 |
| | | | Save area | Device | M100 | XG-PD | 6-1 |
| | | | Size | 4 | | | |
| | GDL-D24A (Input 32 points) | | Station no. | 2 | | SyCon | 4-3, 5-2 |
| | | | Communication method | COS (Change of State) (Transmission period: 200ms) | | SyCon | 5-3 (5-4) |
| | | | Read area | Device | M110 | XG-PD | 6-1 |
| | | | Size | 4 | | | |
| | GDL-DT4A (Output 16 points, Input 16 points) | | Station no. | 3 | | SyCon | 4-3, 5-2 |
| | | | Communication method | COS (Change of State) (Transmission period: 200ms) | | SyCon | 5-3 (5-4) |
| | | | Read area | Device | M102 | XG-PD | 6-1 |
| | | Size | | 2 | | | |
| Save area | | Device | M112 | XG-PD | 6-1 | | |
| | Size | 2 | | | | | |
| Etc. | Master Setting | | | Change of basic setting value | | SyCon | 2-1 ~ 2-3 |
| | Device Assignment | | | Setting of computer's communication port | | SyCon | 6-1 ~ 6-2 |

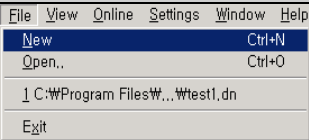

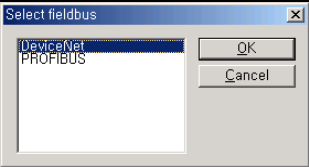

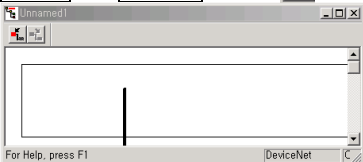

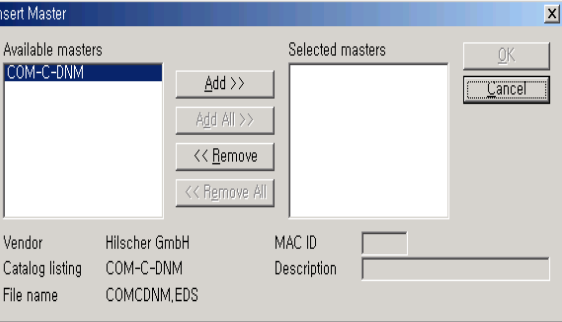

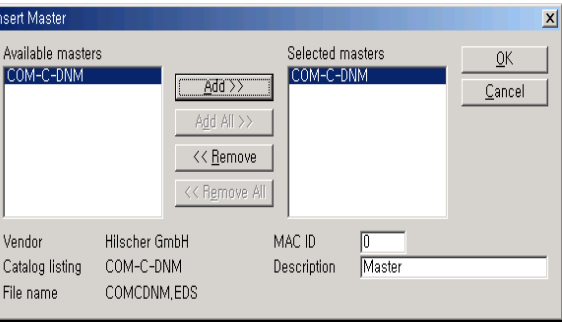

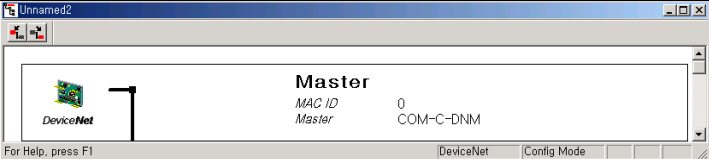

• Configuration of system

Chapter 7 Communication Program

[SyCon 1 phase] Master and MAC ID setting

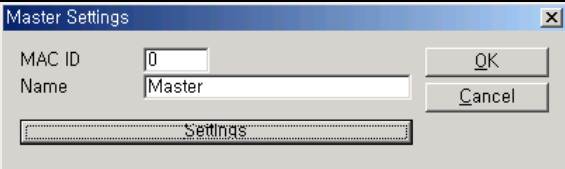

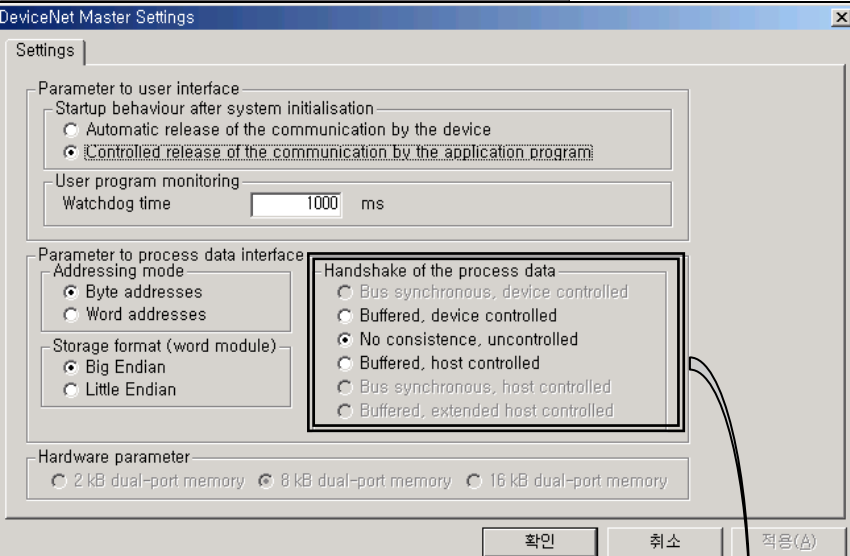

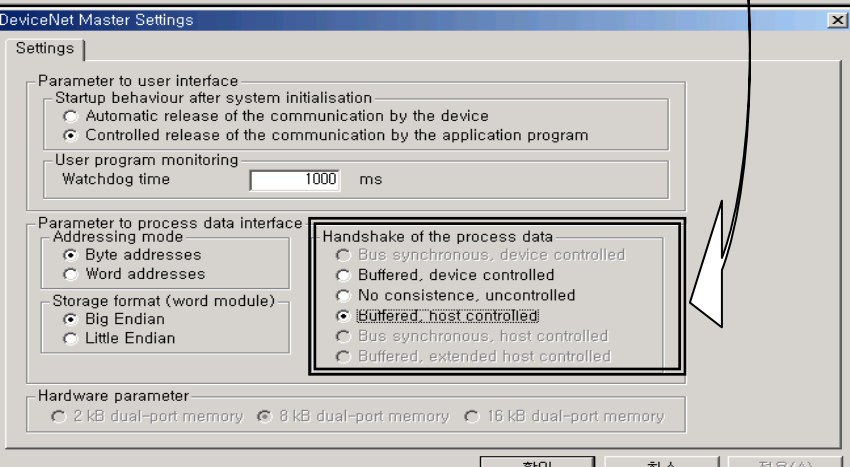

Menu: **File** → **New**

| Phase | Item | Screen configuration and setting description | |
|-------|---------------------------|--|---|
| 1-1 | Make a new file |  <p>- Make a new file.</p> | |
| 1-2 | Select fieldbus |  <p>- Select DeviceNet.</p> | |
| 1-3 | Master setting | <p>Master setting</p> <p>Insert → Master or </p>  | |
| 1-4 | Select masters |  | <p>Master type : COM-C-DNM</p> |
| 1-5 | MAC ID setting |  | <p>MAC ID: 0</p> <p>Description: Master (Input only English and figure)</p> |
| 1-6 | Master setting completion |  | |

Chapter 7 Communication Program

[SyCon 2 phase] Change of Basic setting

Menu: **Settings** → **Master Settings**

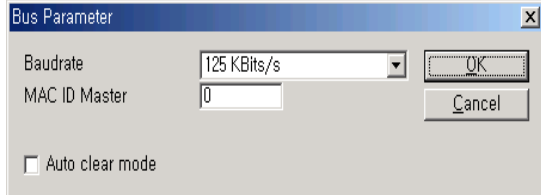

| Phase | Item | Screen configuration and setting description | |
|-------|-------------------------|---|---|
| 2-1 | Master Settings |  <p>Master Settings dialog box showing MAC ID: 0 and Name: Master. Buttons: OK, Cancel, Settings.</p> | <p>Master MAC ID: 0</p> <p>Name: Master</p> |
| 2-2 | Settings |  <p>DeviceNet Master Settings dialog box. Settings tab. Parameter to user interface: Startup behaviour after system initialisation (Automatic release of the communication by the device, Controlled release of the communication by the application program). User program monitoring: Watchdog time 1000 ms. Parameter to process data interface: Addressing mode (Byte addresses, Word addresses), Storage format (word module) (Big Endian, Little Endian). Hardware parameter: 2 kB dual-port memory, 8 kB dual-port memory, 16 kB dual-port memory. Handshake of the process data: Bus synchronous, device controlled; Buffered, device controlled; No consistence, uncontrolled; Buffered, host controlled; Bus synchronous, host controlled; Buffered, extended host controlled. Buttons: 확인, 취소, 적용(A).</p> | |
| 2-3 | Change of setting value |  <p>DeviceNet Master Settings dialog box. Settings tab. Parameter to user interface: Startup behaviour after system initialisation (Automatic release of the communication by the device, Controlled release of the communication by the application program). User program monitoring: Watchdog time 1000 ms. Parameter to process data interface: Addressing mode (Byte addresses, Word addresses), Storage format (word module) (Big Endian, Little Endian). Hardware parameter: 2 kB dual-port memory, 8 kB dual-port memory, 16 kB dual-port memory. Handshake of the process data: Bus synchronous, device controlled; Buffered, device controlled; No consistence, uncontrolled; Buffered, host controlled; Bus synchronous, host controlled; Buffered, extended host controlled. Buttons: 확인, 취소, 적용(A).</p> | |

*Only 'Handshake of the process data' setting can be set.

Chapter 7 Communication Program

[SyCon 3 Phase] Baudrate

Menu: **Settings** → **Bus Parameter**

| Phase | Item | Screen configuration and setting description | |
|-------|---------------|--|--|
| 3-1 | Bus Parameter |  | Baudrate: 125KBits/s MAC ID Master: 0 Auto clear mode: Refer to 5-3-4. |

* Auto clear mode

(1) If Auto clear mode is selected

- If error is occurred in slave module, the communication stops for the whole system.
- Dnet I/F module's HS LED is flickering, MNS LED red light flickering.

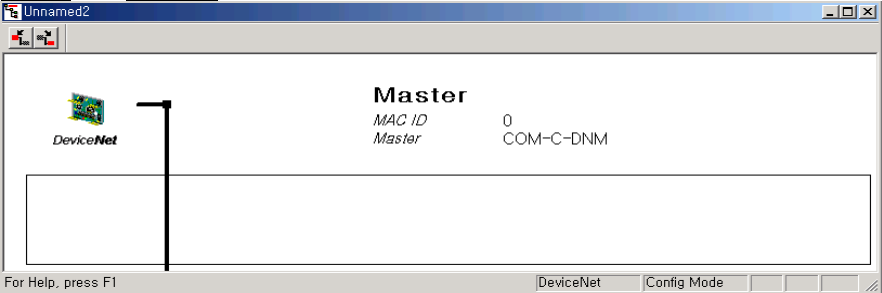

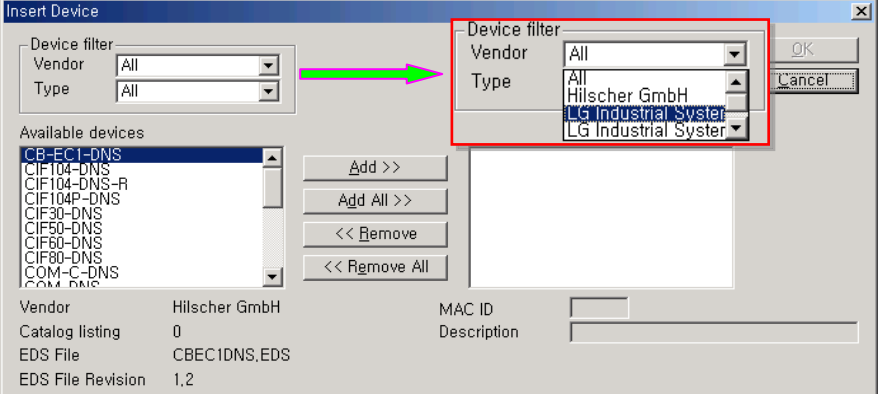

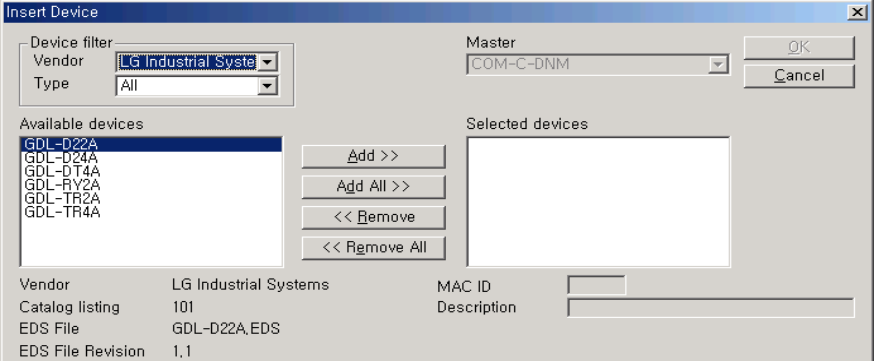

(2) If Auto clear mode is not selected

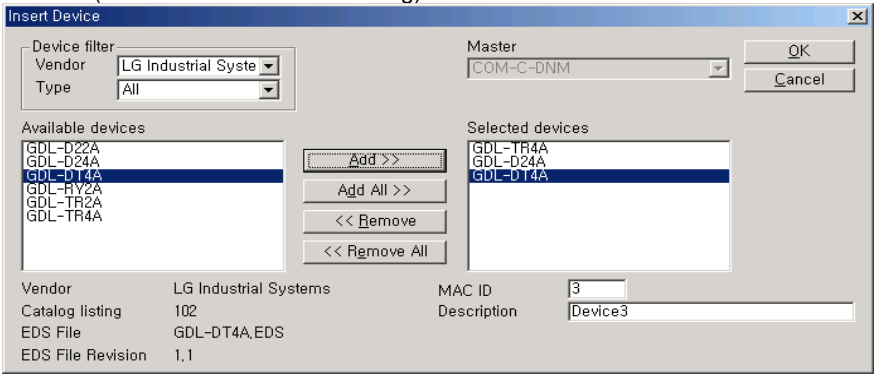

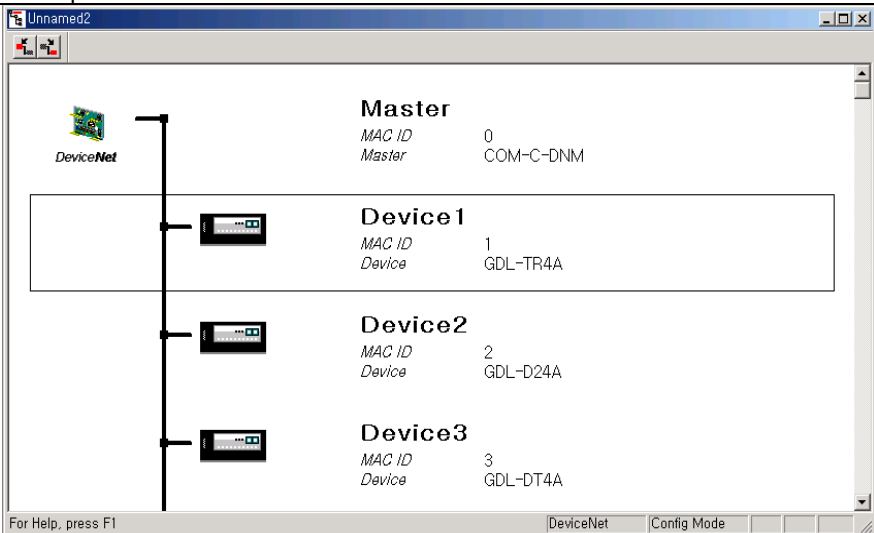

- If error is occurred in slave module, the communication keeps for normal slave module.

Chapter 7 Communication Program

[SyCon 4 phase] Slave and MAC ID setting

Menu: **Insert** → **Master**

| Phase | Item | Screen configuration and setting description |
|-------|---------------|--|
| 4-1 | Slave setting | <div>Master setting</div> <div>Insert → Master or </div> <div></div> |
| 4-2 | Select slave | <div>1 phase: Device filter (Classified by product maker)</div> <div></div> <div>2 phase: Available Devices (Select slave module)</div> <div></div> |

| Phase | Item | Screen configuration and setting description |
|-------|--------------------------|--|
| 4-3 | MAC ID setting | <div><p>MAC ID (Slave module MAC ID setting)</p><p>Description: Device1/ Device2/ Device3</p></div> |
| 4-4 | Slave setting completion | <div></div> |

Chapter 7 Communication Program

[SyCon 5-1 phase] Slave module communication methods setting – Slave module: GDL-TR4A

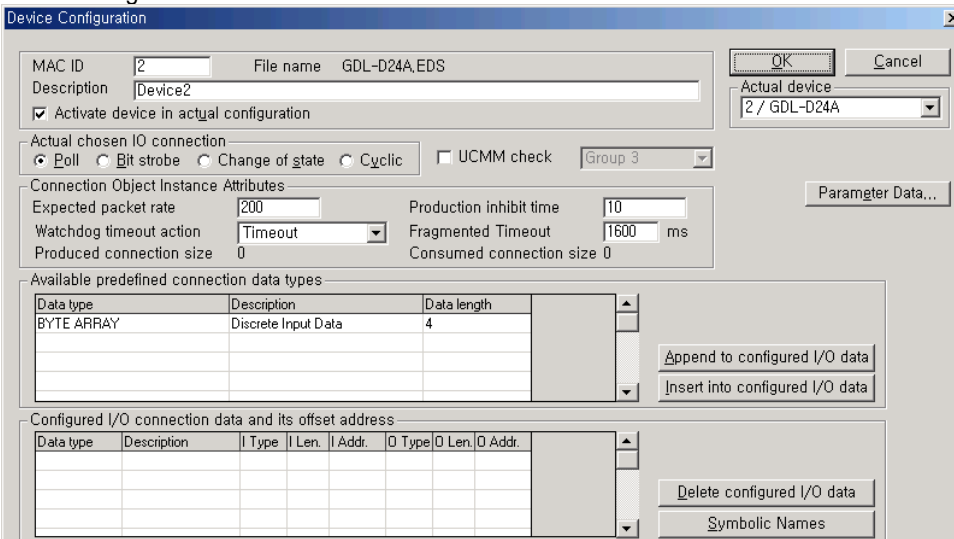

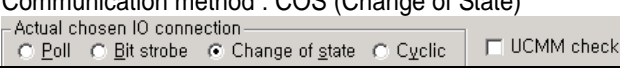

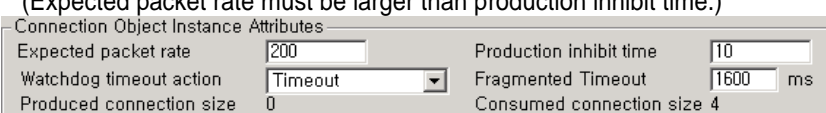

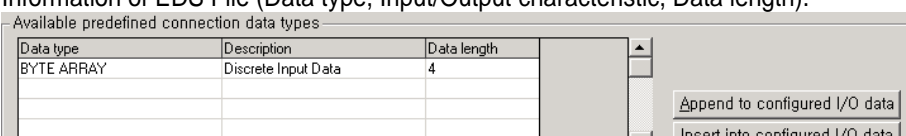

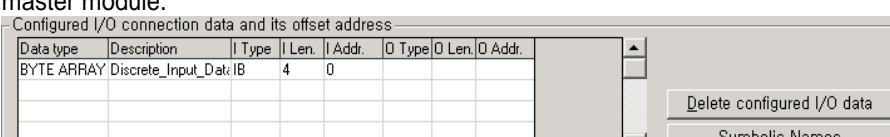

Menu: **Settings** → **Device Configuration**

| Phase | Item | Screen configuration and setting description |
|-------|---|---|
| 5-1 | Slave communication methods setting | <p>Slave module setting</p> |
| 5-2 | Slave MAC ID | <p>MAC ID setting: 1</p> |
| 5-3 | Slave communication method | <p>Communication method: Poll</p> |
| 5-4 | Slave Transmission/Reception period setting | <p>Transmission/Reception data period and response condition setting → Poll is default communication method.</p> |
| 5-5 | Slave data structure (EDS File) | <p>Information of EDS File (Data type, Input/Output characteristic, Data length).</p> <p>→ Select 'BYTE ARRAY' and then click Append to configured I/O data. The data is displayed as next 5-6 phase.</p> |
| 5-6 | Slave data structure | <p>Slave structure (Data type, Input/Output characteristic, Data length) is transmitted to master module.</p> |

Chapter 7 Communication Program

[SyCon 5-2 phase] Slave communication method setting – slave module: GDL-D24A

Menu: **Settings** → **Device Configuration**

| Phase | Item | Screen configuration and setting description |
|-------|--|--|
| 5-1 | Slave communication method setting | <p>Slave setting</p>  |
| 5-2 | Slave MAC ID | <p>MAC ID: 2</p>  |
| 5-3 | Slave communication method | <p>Communication method : COS (Change of State)</p>  |
| 5-4 | Slave Transmission /Reception period setting | <p>Transmission/Reception data period and response condition setting → Expected packet rate must be 200ms in COS (Change of State) communication method. (Expected packet rate must be larger than production inhibit time.)</p>  |
| 5-5 | Slave data structure (EDS File) | <p>Information of EDS File (Data type, Input/Output characteristic, Data length).</p>  <p>→ Select 'BYTE ARRAY' and then click Append to configured I/O data. The data is displayed as next 5-6 phase.</p> |
| 5-6 | Slave data structure | <p>Slave structure (Data type, Input/Output characteristic, Data length) is transmitted to master module.</p>  |

Chapter 7 Communication Program

[SyCon 5-3 phase] slave communication method setting – slave module: GDL-DT4A

Menu: **Settings** → **Device Configuration**

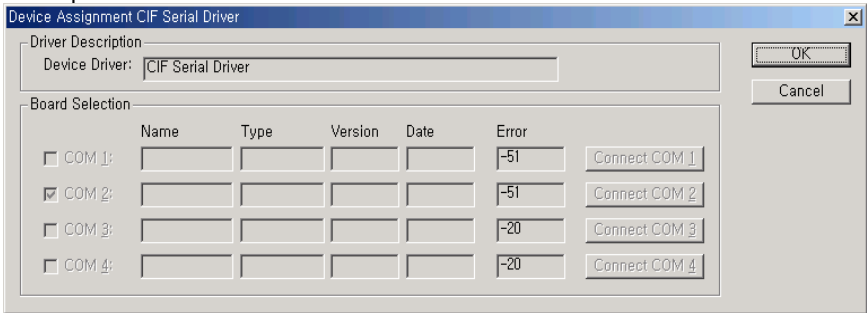

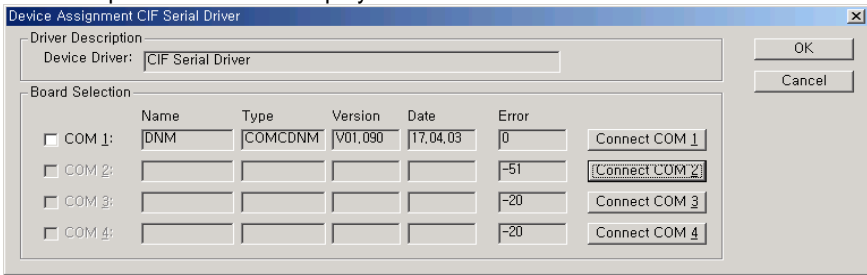

| Phase | Item | Screen configuration and setting description |
|-------|---|---|
| 5-1 | Slave communication method setting | <p>Slave setting</p> |
| 5-2 | Slave MAC ID | <p>MAC ID: 3</p> |
| 5-3 | Slave communication method | <p>Communication method: COS (Change of State)</p> |
| 5-4 | Slave Transmission/Reception period setting | <p>Transmission/Reception data period and response condition setting → Expected packet rate must be 200ms in COS (Change of State) communication method. (Expected packet rate must be larger than production inhibit time.)</p> |
| 5-5 | Slave data structure (EDS File) | <p>Information of EDS File (Data type, Input/Output characteristic, Data length).</p> <p>→ Select 'BYTE ARRAY' and then click Append to configured I/O data. The data is displayed as next 5-6 phase.</p> |
| 5-6 | Slave data structure | <p>Slave structure (Data type, Input/Output characteristic, Data length) is transmitted to master module.</p> |

Chapter 7 Communication Program

[SyCon 6 phase] Serial port selection

The cable diagram is same as RS-232C cable diagram using in CPU module. Use same kind cable.

Menu: **Settings** → **Device Assignment**

| Phase | Item | Screen configuration and setting description |
|-------|---------------------|--|
| 6-1 | Serial port setting | <div>Serial port</div> <div></div> |
| 6-2 | Port search | <div><div>Connect COM1 → Connect COM2 → Connect COM3 → Connect COM4</div><div>Activated port's error value displayed '0'.</div><div></div><div>Check COM 1 (<input type="checkbox"/> COM 1: → <input checked="" type="checkbox"/> COM 1:) and Select OK.</div></div> |

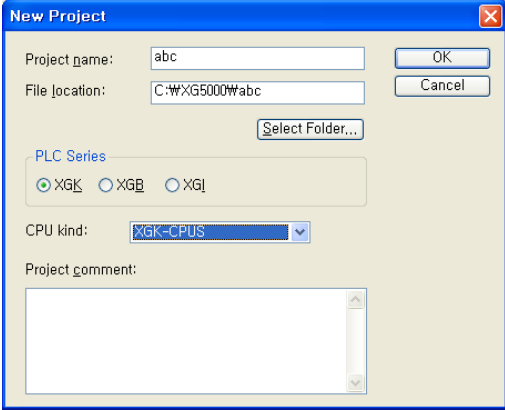

[SyCon 7 phase]

Menu: **Online** → **Download**

Chapter 7 Communication Program

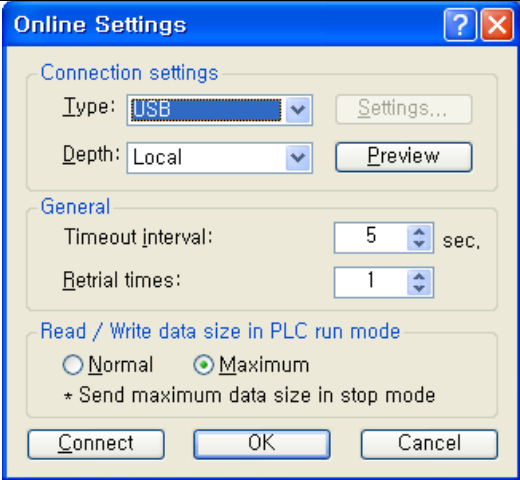

[XG-PD 1 phase] Select CPU module type

Menu: **Option** – **PLC Type Settings**

| Phase | Item | Screen configuration and setting description |
|-------|-------------------|--|
| 1-1 | Select CPU module | <div><p>The 'New Project' dialog box is shown. It contains fields for 'Project name' (abc), 'File location' (C:\XG5000\abc), and a 'Select Folder...' button. Under 'PLC Series', the 'XGK' radio button is selected. The 'CPU kind' dropdown is set to 'XGK-CPU5'. There is a 'Project comment' text area at the bottom.</p></div> <p>CPU module type: XGK-CPU5</p> |

[XG-PD 2 phase] Connection settings

Menu: **Online** – **Connection settings**

| Phase | Item | Screen configuration and setting description |
|-------|---------------------|--|
| 2-1 | Connection settings | <div><p>The 'Online Settings' dialog box is shown. Under 'Connection settings', 'Type' is set to 'USB' and 'Depth' is set to 'Local'. Under 'General', 'Timeout interval' is 5 sec and 'Retrial times' is 1. Under 'Read / Write data size in PLC run mode', the 'Maximum' radio button is selected. At the bottom, there are 'Connect', 'OK', and 'Cancel' buttons.</p></div> <p>Type: USB Depth: Local</p> |

[XG-PD 3 phase] Connection

Menu: **Online** – **Connection**

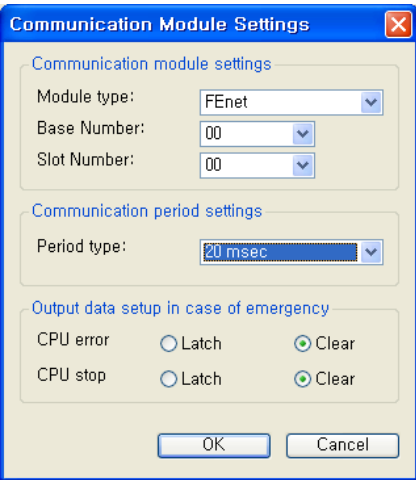

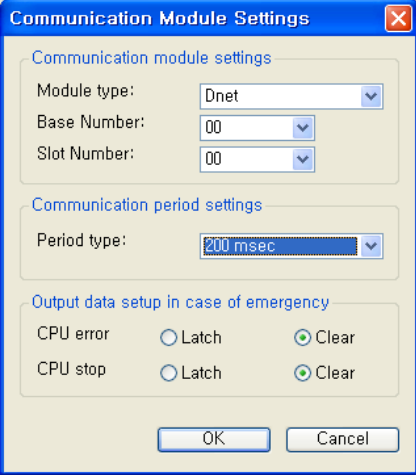

Chapter 7 Communication Program

[XG-PD 4 phase] Read IO information

Menu: Online - Read I/O information

[XG-PD 5 phase] High-speed link setting

Menu: Parameter → High-speed link (HS Link) → High-speed link1

| Phase | Item | Screen configuration and setting description |
|-------|----------------------------------|--|
| 5-1 | Communication Module Settings | <div>Initial screen</div> <div></div> |
| | | <div>High-speed link 1: Dnet I/F module</div> <div></div> <div>Module type: Dnet Base no.: 00 Slot no.: 00 Communication period settings: 200ms</div> |

Chapter 7 Communication Program

[XG-PD 6] SyCon Upload (Dnet, Pnet)

Menu: Online → SyCon Upload (Dnet, Pnet)

| Phase | Item | Screen configuration and setting description | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
|-------|-------------------------------|---|----------------------|----------------|----------------------|----------------------|-----------------------|---------------------|-----------------------|-----------------------|---|------|---|------|--|---|--|---|---|---------|---|-----|--|--|---|---|---|--------------|---|-----|--|---|---|---|---|--|--|--|--|--|---|--|---|--|--|--|--|--|---|--|---|--|--|--|--|--|---|--|---|--|--|--|--|--|---|--|---|--|--|--|--|--|---|--|---|--|--|--|--|--|---|--|---|--|--|--|--|--|----|--|----|--|--|--|--|--|----|--|----|--|--|--|--|--|----|--|--|--|--|--|--|--|----|--|--|--|--|--|--|--|----|--|--|--|--|--|--|--|----|--|--|--|--|--|--|--|----|--|--|--|--|--|--|--|----|--|--|--|--|--|--|--|

| 7 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

Chapter 7 Communication Program

[XG-PD 7 phase] Write High-speed link parameter

Menu: Online → Write Parameter

| Phase | Item | Screen configuration and setting description | |
|-------|-----------------|--|---|
| 7-1 | Write parameter | Initial screen | Select High-speed link |
| | |  |  |
| | | Parameter is downloaded after click 'OK'. | |

- Written parameter is saved CPU module.
 - If CPU module is exchanged, High-speed link parameter has to backup from used CPU module.

[XG-PD 8 phase] High-speed link enabling

Menu: Online → Enable Link (HS Link, P2P)

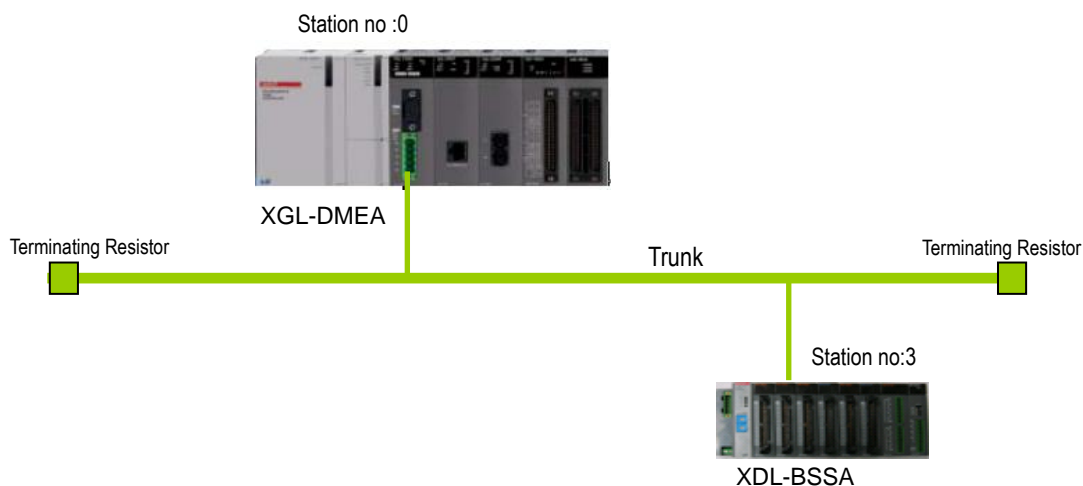

→ Communication is permitted between master module and slave module.

7.2 Example Program (XDL-BSSA setting)

Basic configuration and setting value for example is as below.

| Setting item | | | Setting | Software | Phase |
|----------------------|-------------------|--|--|----------|-----------|
| System configuration | Master | Master setting | XGL-DMEA | SyCon | 1-3 ~ 1-4 |
| | | Base no. | 0 | XG-PD | 5-1 |
| | | Slot no. | 0 | XG-PD | 5-1 |
| | | Station no. | 0 | SyCon | 1-5, 3-1 |
| | | Communication speed | 125kbps | SyCon | 3-1 |
| | | High Speed Link setting | High Speed Link 1 | XG-PD | 5-1 |
| | | Communication cycle setting | 200ms | XG-PD | 5-1 |
| | Slave | Select slave | XDL-BSSA | SyCon | 4-1 ~ 4-4 |
| | | XDL-BSSA (XBE-TN32A:Tr. Output XBE-RY16A:Relay Output XBE-DC32A:DC Input XBF-AD04A:A/D Conversion module XBE-DV04A:D/A Conversion module) | Station no. | 3 | SyCon |
| | | | Communication method | Poll | SyCon |
| | | | Read area | Device | P1000 |
| | | | | Size | 14 |
| | | | Save area | Device | M200 |
| | | | | Size | 12 |
| Etc. | Master Setting | | Change of basic setting value | SyCon | 2-1 ~ 2-3 |
| | Device Assignment | | Communication port setting of computer | SyCon | 6-1 ~ 6-2 |

• System Configuration

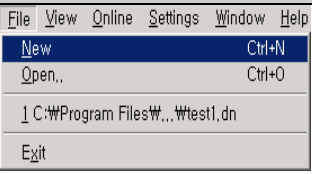

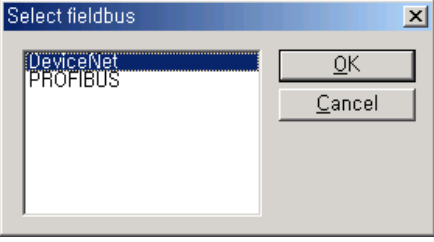

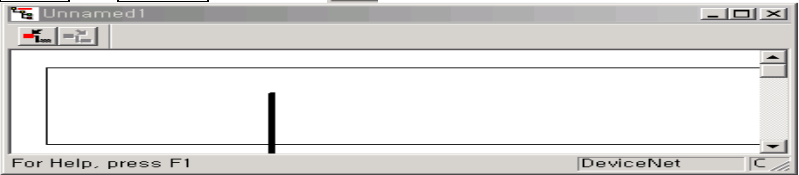

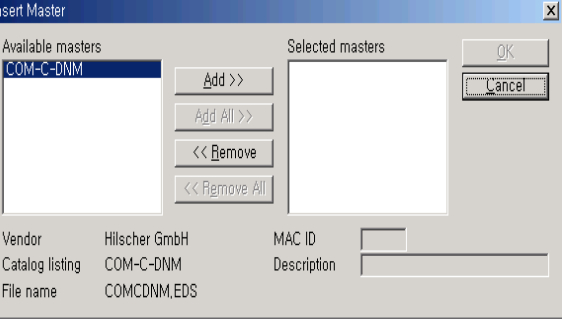

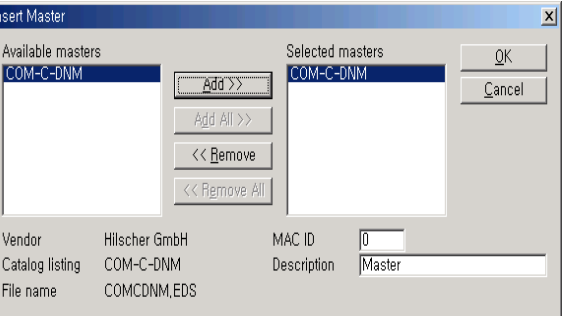

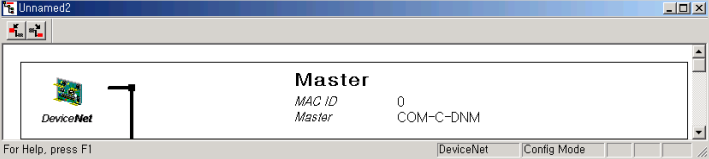

| Slot no. | 1 | 2 | 3 | 4 | 5 |
|---------------------|------------------|------------------|------------------|-----------------------|-----------------------|
| Model Name | XBE-TN32A | XBE-RY16A | XBE-DC32A | XBF-AD04A | XBE-DV04A |
| Contents | Tr. Output | Relay Output | DC Input | A/D Conversion module | D/A Conversion module |
| Occupied I/O points | 32points (4Byte) | 16Points (2Byte) | 32Points (4byte) | 64Points (8Byte) | 64Points (8Byte) |

Chapter 7 Communication Program

[SyCon 1 Phase] Master and station no. setting

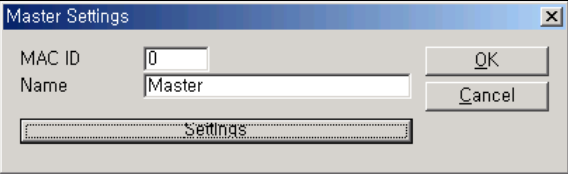

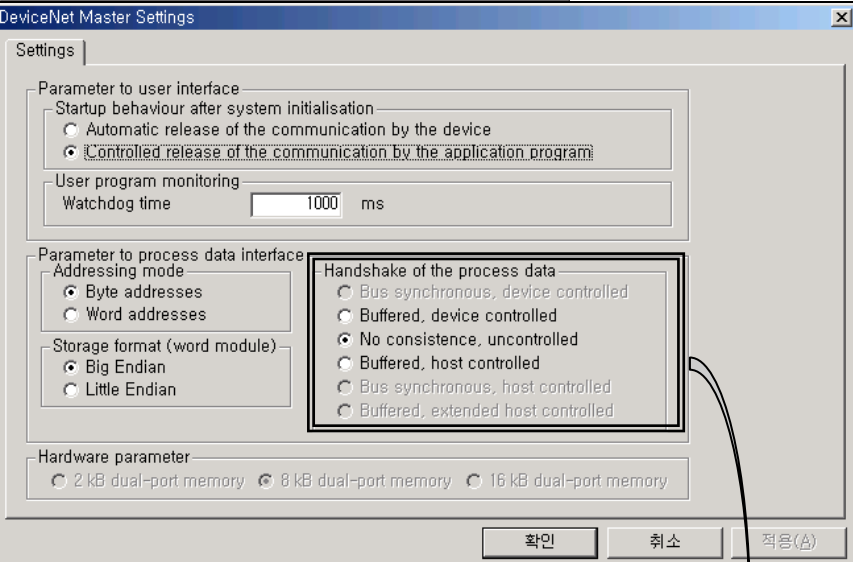

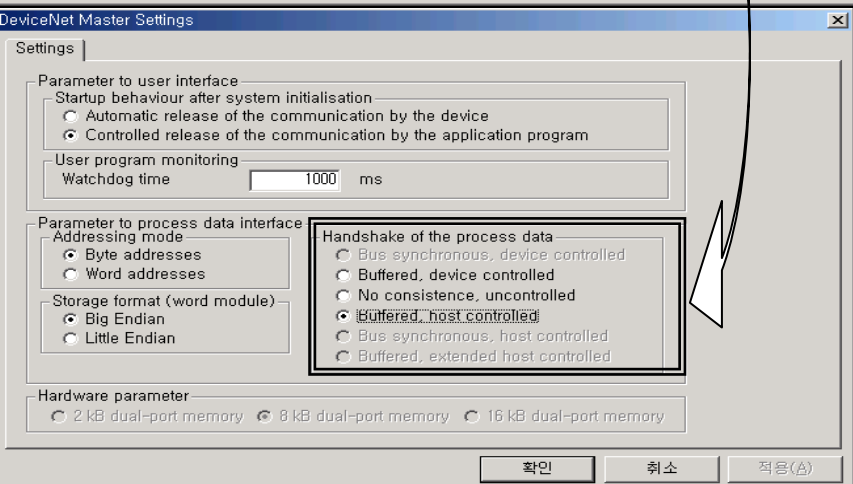

Menu selection : **File** → **New**

| Phase | Item | Screen configuration and setting description | |
|-------|---------------------------|---|--|
| 1-1 | File writing |  <p>New File writing</p> | |
| 1-2 | Fieldbus selection |  <p>DeviceNet selection</p> | |
| 1-3 | Master setting | <p>Insert master setting window</p> <p>Insert → Master or </p>  | |
| 1-4 | Master selection |  <p>Master type selection : COM-C-DNM</p> | |
| 1-5 | Station no. setting |  <p>station no selection: 0</p> <p>Added description: Master (only english or numeric)</p> | |
| 1-6 | Master setting completion |  | |

Chapter 7 Communication Program

[SyCon 2 Phase] Basic setting change

Menu selection : **Settings** → **Master Settings**

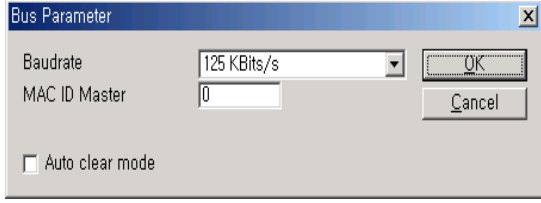

| Phase | Item | Screen configuration and setting description | |
|-------|----------------------|--|--|
| 2-1 | Master Settings |  | Master station no. change : 0 Description change: Master |
| 2-2 | Basic setting |  | |
| 2-3 | Setting value change |  | |

* Please don't set exclusive of "Handshake of the process data".

Chapter 7 Communication Program

[SyCon 3 Phase] Communication speed

Menu selection : **Settings** → **Bus Parameter**

| Phase | Item | Screen configuration and setting description | |
|-------|---------------|--|--|
| 3-1 | Bus Parameter |  | Communication speed(Baudrate) : 125KBit/s Master station no. setting : 0 Auto Clear mode : refer to 5-3-4 |

* Auto Clear Mode

(1) When it is selected

- If it is occurred to error in slave module, communication stop on overall system.
- HS LED flickering of Dnet I/F module
- MNS Red LED On

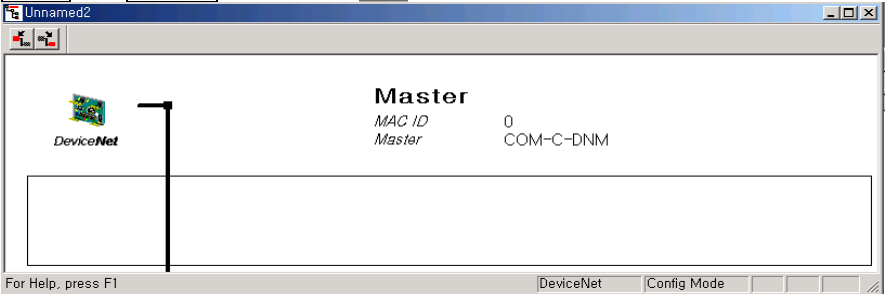

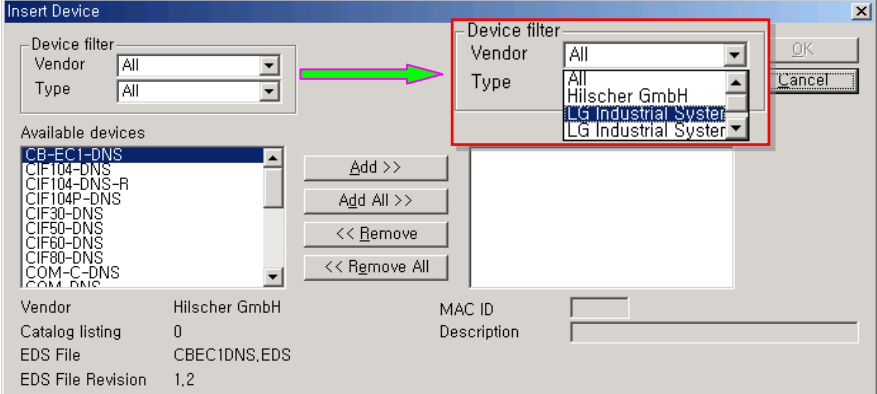

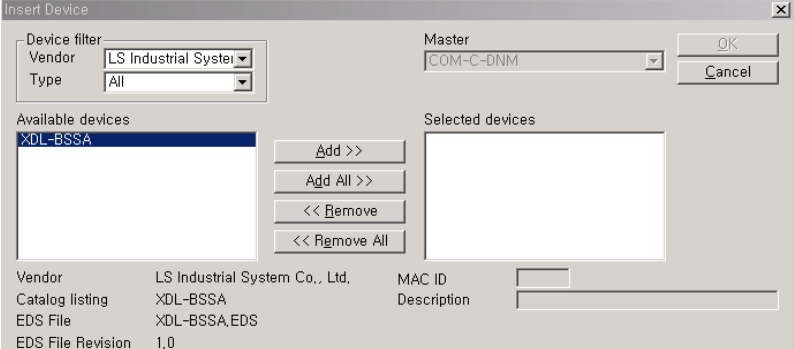

(2) When it is not selected

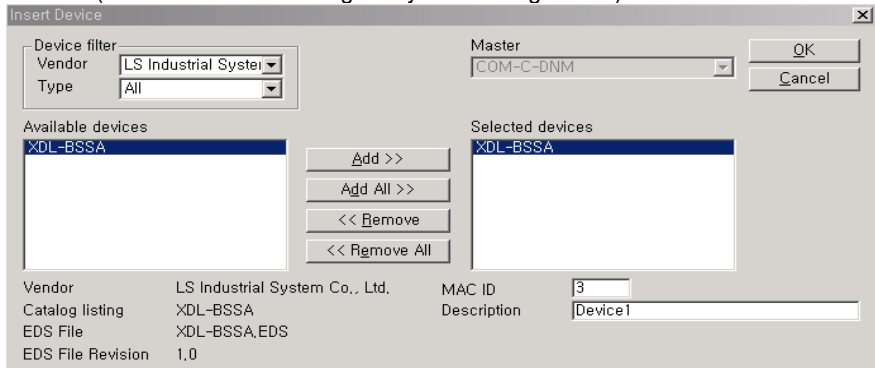

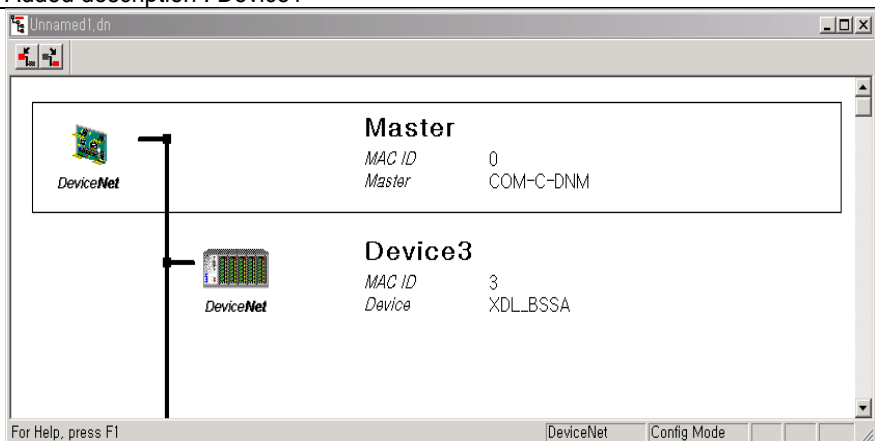

- If it is occurred to error in slave module, communication is kept about normal slave Module.

Chapter 7 Communication Program

[SyCon 4 Phase] Slave and station no. setting

Menu selection : **Insert** → **Device**

| Phase | Item | Screen configuration and setting description |
|-------|-----------------|--|
| 4-1 | Slave setting | <div>Insert Device setting window</div> <div>Insert → Device or </div> <div></div> |
| 4-2 | Slave selection | <div>1 stage : Device filter (product classification by maker)</div> <div></div> <div>2 stage : Available Device (slave selection for system configuration)</div> <div></div> |

| Phase | Item | Screen configuration and setting description | | | | | | | | | | | | | | | | |
|-------------------|--------------------------------|--|---------|--------------------------------|--------|---|-----------------|----------|-------------|---------|----------|--------------|--|--|-------------------|-----|--|--|
| 4-3 | Station no. setting | <div>MAC ID (slave station no. setting for system configuration)</div> <div><p>The 'Insert Device' dialog box is shown. It has a 'Device filter' section with 'Vendor' set to 'LS Industrial System' and 'Type' set to 'All'. The 'Master' dropdown is set to 'COM-C-DNM'. There are 'Available devices' and 'Selected devices' lists, both containing 'XDL-BSSA'. Between the lists are buttons: 'Add >>', 'Add All >>', '<< Remove', and '<< Remove All'. At the bottom, there is a table of device information:</p><table><tr><td>Vendor</td><td>LS Industrial System Co., Ltd.</td><td>MAC ID</td><td>3</td></tr><tr><td>Catalog listing</td><td>XDL-BSSA</td><td>Description</td><td>Device1</td></tr><tr><td>EDS File</td><td>XDL-BSSA.EDS</td><td></td><td></td></tr><tr><td>EDS File Revision</td><td>1.0</td><td></td><td></td></tr></table></div> <div>Added description : Device1</div> | Vendor | LS Industrial System Co., Ltd. | MAC ID | 3 | Catalog listing | XDL-BSSA | Description | Device1 | EDS File | XDL-BSSA.EDS | | | EDS File Revision | 1.0 | | |
| Vendor | LS Industrial System Co., Ltd. | MAC ID | 3 | | | | | | | | | | | | | | | |
| Catalog listing | XDL-BSSA | Description | Device1 | | | | | | | | | | | | | | | |
| EDS File | XDL-BSSA.EDS | | | | | | | | | | | | | | | | | |
| EDS File Revision | 1.0 | | | | | | | | | | | | | | | | | |
| 4-4 | Slave setting completion | <div><p>The 'DeviceNet' configuration window shows a network diagram with two devices connected by a vertical line. The top device is labeled 'Master' and has 'MAC ID 0' and 'Master COM-C-DNM'. The bottom device is labeled 'Device3' and has 'MAC ID 3' and 'Device XDL-BSSA'. The window title is 'Unnamed1.dn'. At the bottom, there is a status bar with 'For Help, press F1', 'DeviceNet', and 'Config Mode'.</p></div> | | | | | | | | | | | | | | | | |

Chapter 7 Communication Program

[SyCon 5 Phase] Slave communication method setting - Slave : XDL-BSSA

Menu selection : **Settings** → **Device Configuration**

| Phase | Item | Screen configuration and setting description |
|-------|---|--|
| 5-1 | Setting window for slave communication method | <p>Slave setting</p> |
| 5-2 | Slave station no | <p>Station no. (MAC ID) setting : 3</p> |
| 5-3 | Slave communication method | <p>Communication method selection : Poll</p> |
| 5-4 | Slave Send/Receive cycle | <p>Send/Receive cycle of slave module and condition setting of response status → Poll method is set by default value</p> |
| 5-5 | Slave Data Configuration (EDS File) | <p>EDS File information(Data type, Input/Output Description, Data size)</p> <p>→ select "BYTE ARRAY" by mouse and Append to configured I/O data then data is displayed as 5-6</p> |
| 5-6 | Slave Data Configuration | <p>Slave configuration(Data type, Input/Output Description, Data size)is transferred to master.</p> |

Chapter 7 Communication Program

[SyCon 6 Phase] Serial port selection

: It is the same with the wiring of RS-232C Loader Cable to be used through CPU module.
Therefore you have to use that cable.

Menu selection : **Settings** → **Device Assignment**

| Phase | Item | Screen configuration and setting description | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
|--|----------------------------|--|----------------------|----------------------|-------|--|------|-------|--|---------------------------------|----------------------|----------------------|----------------------|----------------------|-----|--|--|----------------------|----------------------|----------------------|----------------------|-----|--|---------------------------------|----------------------|----------------------|----------------------|----------------------|-----|--|---------------------------------|----------------------|----------------------|----------------------|----------------------|-----|--|
| 6-1 | Serial port setting window | <div>Serial port</div> <div><div>Device Assignment CIF Serial Driver</div><div><div>Driver Description</div><div>Device Driver: <input type="text" value="CIF Serial Driver"/></div><div><input type="button" value="OK"/></div><div><input type="button" value="Cancel"/></div></div><div><div>Board Selection</div><table><thead><tr><th></th><th>Name</th><th>Type</th><th>Version</th><th>Date</th><th>Error</th><th></th></tr></thead><tbody><tr><td><input type="checkbox"/> COM 1:</td><td><input type="text"/></td><td><input type="text"/></td><td><input type="text"/></td><td><input type="text"/></td><td>-51</td><td><input type="button" value="Connect COM 1"/></td></tr><tr><td><input checked="" type="checkbox"/> COM 2:</td><td><input type="text"/></td><td><input type="text"/></td><td><input type="text"/></td><td><input type="text"/></td><td>-51</td><td><input type="button" value="Connect COM 2"/></td></tr><tr><td><input type="checkbox"/> COM 3:</td><td><input type="text"/></td><td><input type="text"/></td><td><input type="text"/></td><td><input type="text"/></td><td>-20</td><td><input type="button" value="Connect COM 3"/></td></tr><tr><td><input type="checkbox"/> COM 4:</td><td><input type="text"/></td><td><input type="text"/></td><td><input type="text"/></td><td><input type="text"/></td><td>-20</td><td><input type="button" value="Connect COM 4"/></td></tr></tbody></table></div></div> | | Name | Type | Version | Date | Error | | <input type="checkbox"/> COM 1: | <input type="text"/> | <input type="text"/> | <input type="text"/> | <input type="text"/> | -51 | <input type="button" value="Connect COM 1"/> | <input checked="" type="checkbox"/> COM 2: | <input type="text"/> | <input type="text"/> | <input type="text"/> | <input type="text"/> | -51 | <input type="button" value="Connect COM 2"/> | <input type="checkbox"/> COM 3: | <input type="text"/> | <input type="text"/> | <input type="text"/> | <input type="text"/> | -20 | <input type="button" value="Connect COM 3"/> | <input type="checkbox"/> COM 4: | <input type="text"/> | <input type="text"/> | <input type="text"/> | <input type="text"/> | -20 | <input type="button" value="Connect COM 4"/> |

◆ Read area/Save area configuration of slave module

1. I/O configuration of Dnet module of extendable type

| Communication Adapter | Slot 0: | Slot 1: | Slot 2: | Slot 3: | Slot 4: |
|-----------------------|----------|----------|----------|---------|---------|
| Read area | P 1000 | P 1002 | M0200 | P 1003 | M0202 |
| Slot0: | Tr. | Relay | DC | DA | AD |
| Slot1: | Output | Output | Input | Output | Input |
| Slot3: | | | | | |
| Save area | 32points | 16points | 32points | (×BF- | (×BF- |
| Slot2: | (×BE- | (×BE- | (×BE- | DA04A) | AD04A) |
| Slot4: | TN32A) | RY16A) | DC32A) | | |

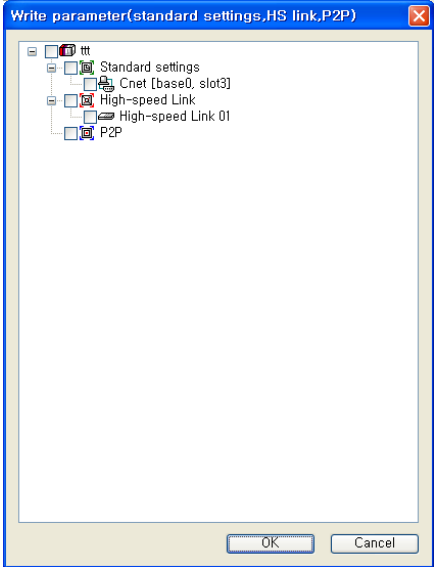

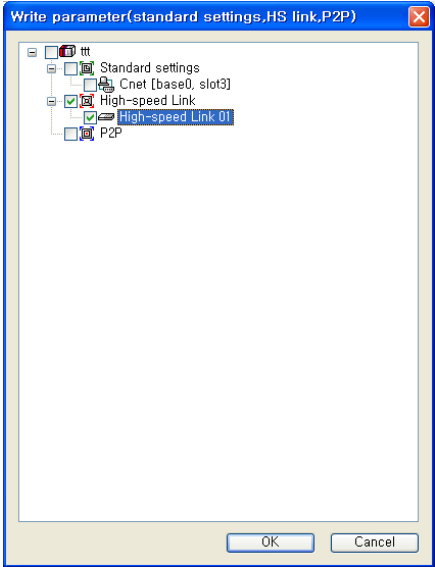

2. Read area/Save area of module

| Read area(Master→Slave) | | | | Save area(Slave→Master) | | | |
|-------------------------|---------|--------------------------|---------------------|-------------------------|---------|-------------------------|-------------------|
| Device | Tx Data | Extendable Output Module | | Device | Rx Data | Extendable Input Module | |
| P.1000 | 14 | 4Byte | TR. Output 32points | M0200 | 12 | 4Byte | DC Input 32points |
| P.1002 | Byte | 2Byte | Relay 16points | M0202 | Byte | 2Byte | A/D Ch0 |
| P.1003 | | 2Byte | D/A Ch0 | M0203 | | 2Byte | Conversion Ch1 |
| P.1004 | | 2Byte | Conversion Ch1 | M0204 | | 2Byte | 4Ch Ch2 |
| P.1005 | | 2Byte | 4Ch Ch2 | M0205 | | 2Byte | Ch3 |
| P.1006 | | 2Byte | Ch3 | | | | |

Chapter 7 Communication Program

[XG-PD 7 Phase] High Speed Parameter Writing

Menu selection : **Online** → **Parameter writing**

| Phase | Item | Screen configuration and setting description | |
|-------|-------------------|--|---|
| | | Initial screen | High Speed Link selection |
| 7-1 | Parameter writing |  |  |
| | | If you click "ok", then the parameter is downloaded. | |

- The parameter wrote is saved to CPU module.
 - Therefore if you exchange CPU module, you have to backup the parameter of High Speed Link.

[XG-PD 8 Phase] High Speed Link enable

Menu selection : **Online** → **Link enable(High speed link, P2P)**

→ Enable the communication between master module and slave module

Chapter 8 Troubleshooting

This chapter is to describe various errors that may occur in system operation, their causes and actions to take against. If any error occurs on the communications module, related error details will be displayed through LED of the communication module. Follow the procedures below to shoot the troubles after checking for errors displayed, based on the applicable LED status referring to product specification.

8.1 Symptoms and Management by LED Status

It shows the symptoms of communication module by LED status and the management.
(When High-speed link is enabled)

| RUN | I/F | HS | D-RUN | MNS | Symptoms | Management |
|-----|------------|------------|------------|----------|---|---|
| ON | Flickering | OFF | Flickering | Green ON | High-speed link disable | - |
| ON | Flickering | ON | ON | Red ON | Slave connection abnormal | Slave connection check Check slave setting |
| ON | Flickering | Flickering | Flickering | Green ON | SyCon setting changed while High-speed link is executed | - |
| ON | Flickering | Flickering | Flickering | Red ON | Whole slave connection error | Check slave connection Check slave setting |
| OFF | OFF | OFF | - | - | Critical defect | Ask customer service center |

[Table 8.1] The symptoms of communication module error (High-speed link is enabled)

8.2 System Diagnosis in XG-PD

It shows the diagnosis item in XG-PD.

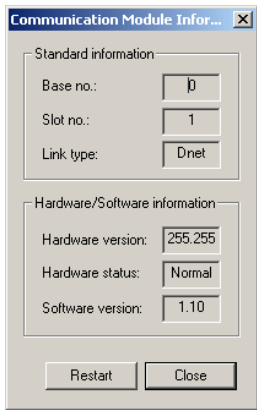

| Diagnosis item | Description |
|----------------------------------|--|
| Communication module information | It displays the standard information of communication module. |
| High-speed link | It displays the flag information of High-speed link. |
| Log | It displays system log and running log. |
| Auto-scan | It displays the slave module which is connected Dnet I/F module. |

[Table 8.2] System diagnosis in XG-PD

It diagnoses the system by [Online] - [System Diagnosis] in XG-PD.

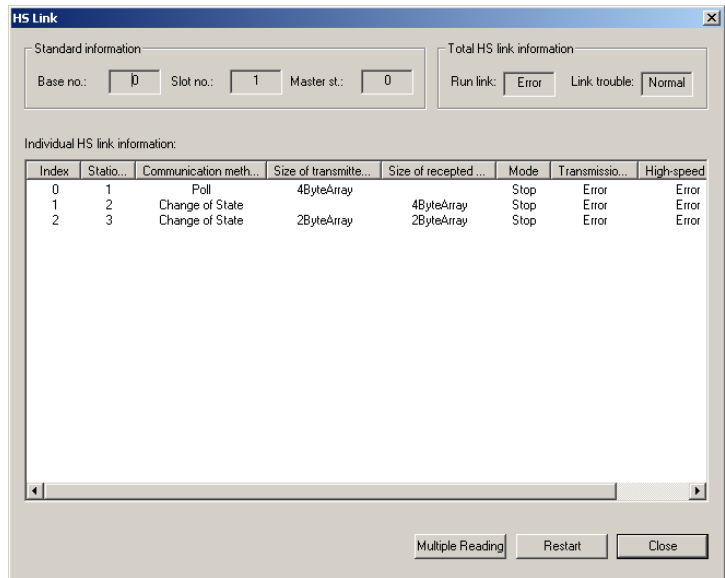

8.2.1 Communication module information

It displays the information of Dnet I/F module.

[Figure 8.1] Communication module information

8.2.2 High-speed link

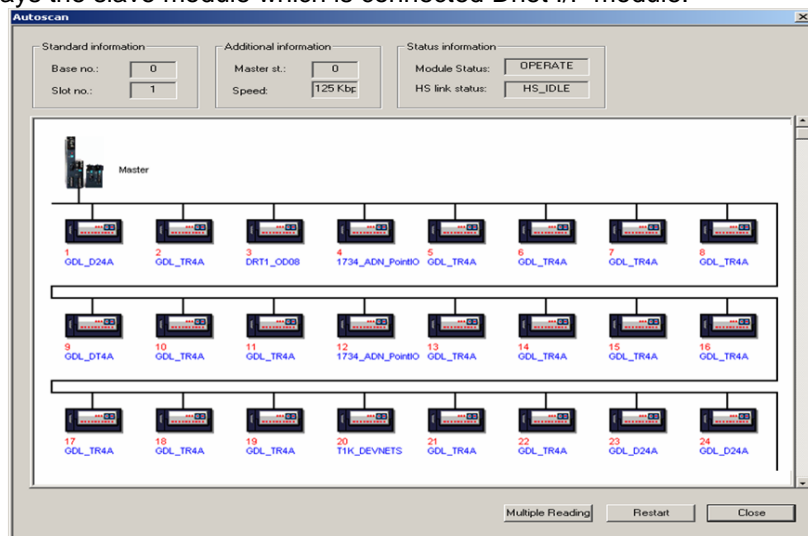

[Figure 8.2] High-speed link

| High-speed link diagnosis | | |
|---|-------------------------------|---|
| Classification (Main item) | Classification (Sub item) | Description |
| Standard information | Base no. | Base number: 0~7 |
| | Slot no. | Slot number: 0~11 |
| | Master st. | Master station number |
| Total High-speed link information | Run link | Normal: All station is a normal communication. Error: If only one station can not to communicate, it is an error. |
| | Link trouble | Communication line's status |
| Individual High- speed link information | Index | High-speed link parameter index (High-speed link block number in XG-PD) |
| | Station number | Master station number |
| | Communication method | Slave's communication method |
| | Size of transmitted data | Transmission data size (Byte) |
| | Size of receipted data | Received data size (Byte) |
| | Mode | Present operation status |
| | Transmission/Reception status | transmission/reception status |
| | High-speed link status | High-speed link status |
| | Error | Error status |

[Table 8.3] High-speed link diagnosis

8.2.3 Autoscanner

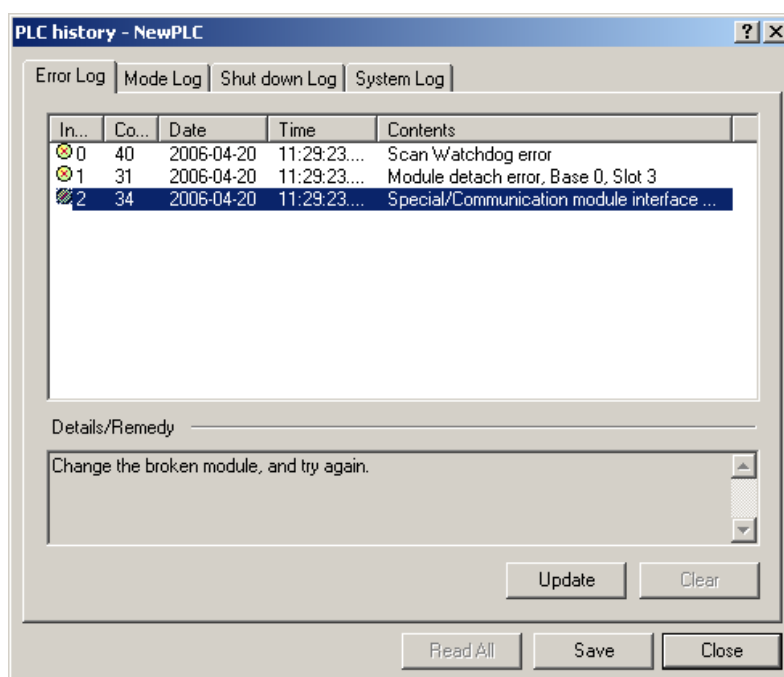

It displays the slave module which is connected Dnet I/F module.

[Figure 8.4 Autoscanner]

8.3 Diagnosis of Communication Module through XG5000

It can monitor the communication status by XG-5000. Connect to CPU port and [Online] – [PLC History] – [PLC Errors/Warnings].

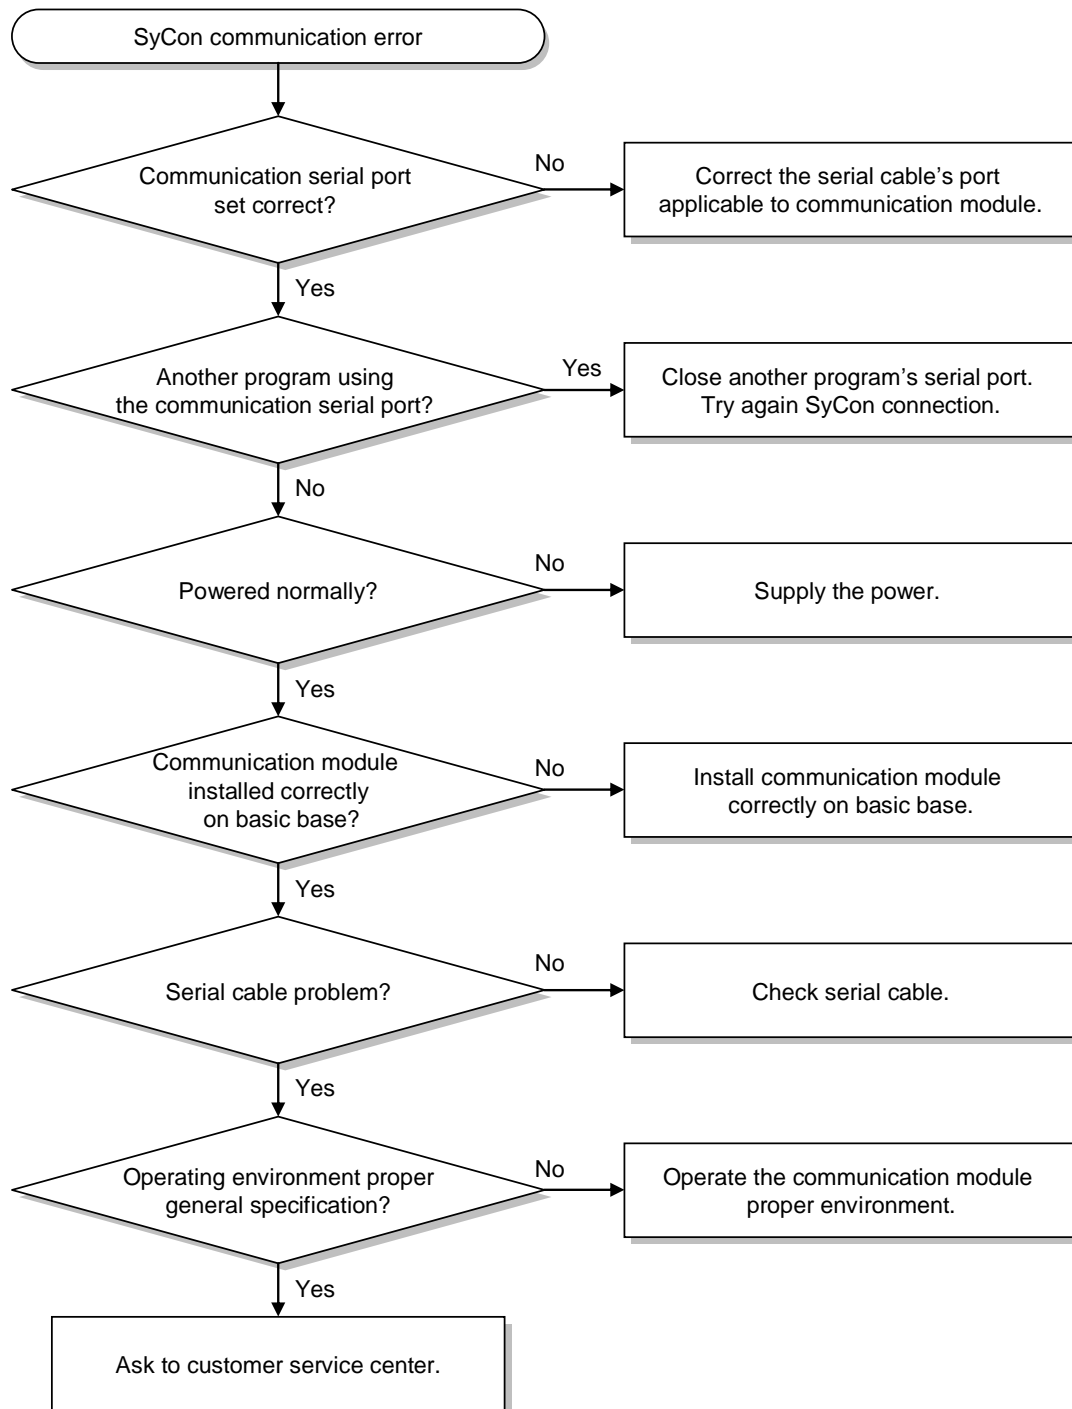

[Figure 8.5] Detailed information of PLC history

If hardware error or CPU interface error is occurred, communication module's LED operates abnormally. Also, the error information is shown through XG-5000.

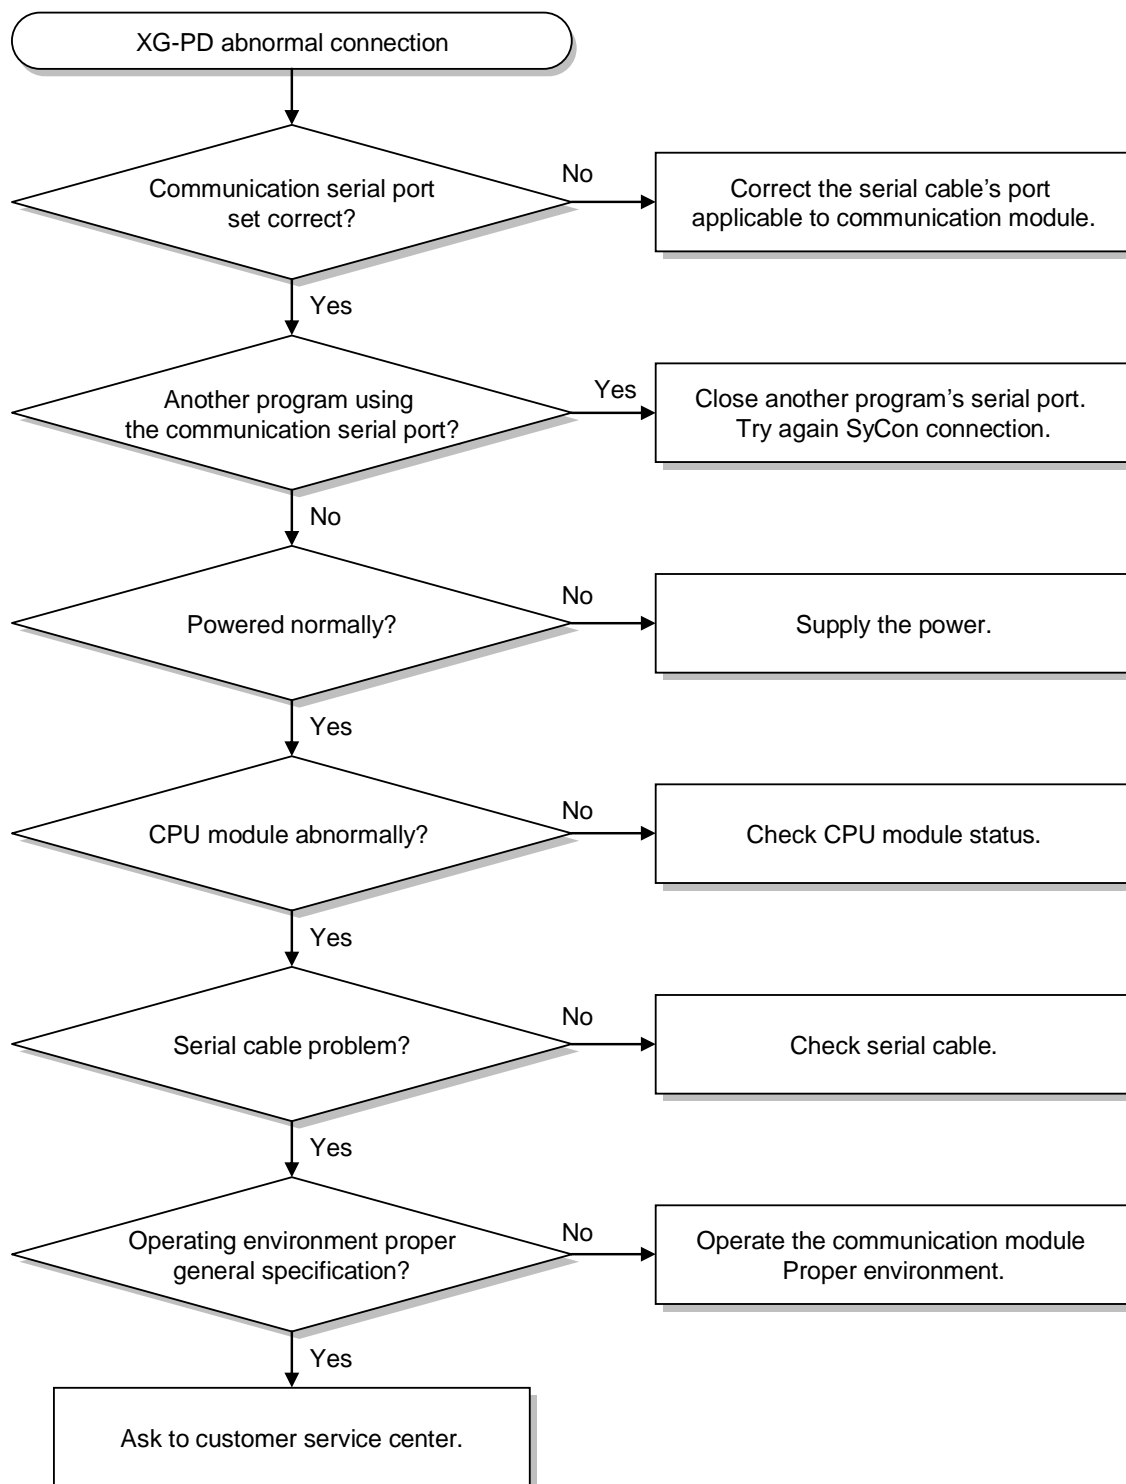

[Figure 8.5] shows Error/Warning information from [Online] - [PLC History] menu in XG-5000.

8.4 Trouble shooting for Respective Error

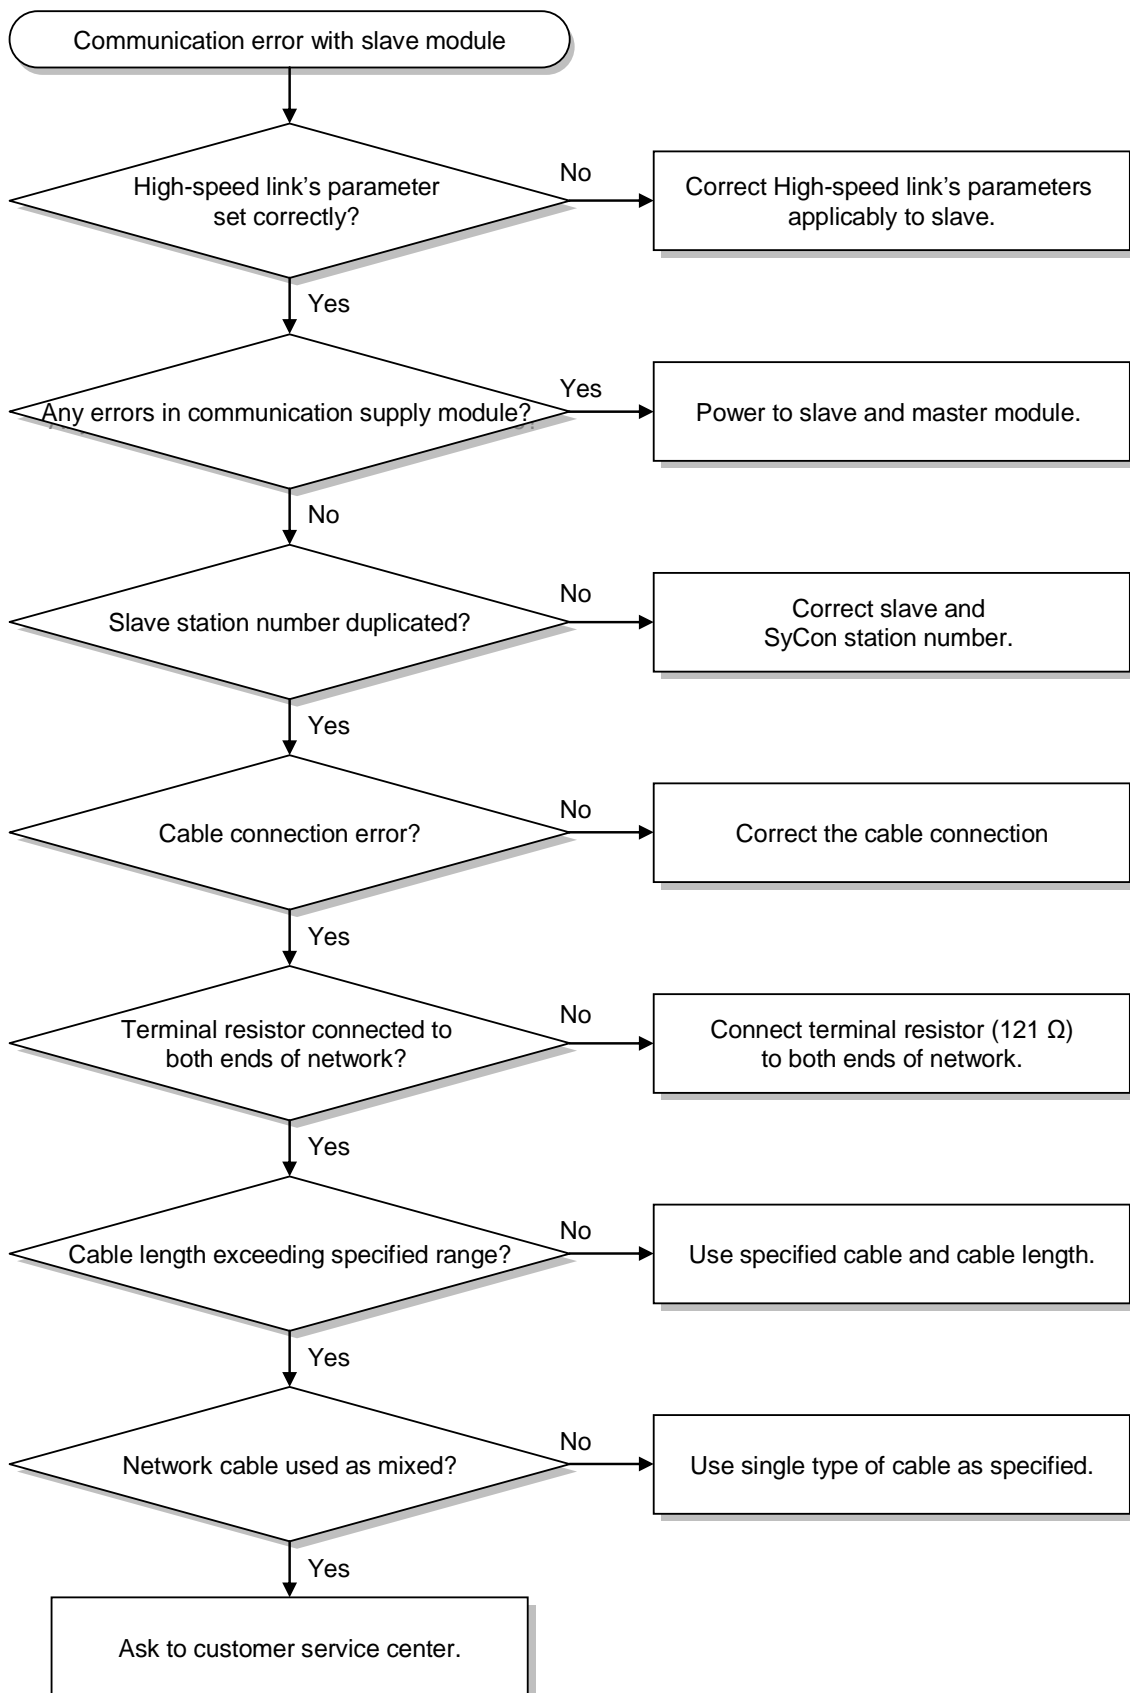

8.4.1 SyCon communication error

8.4.2 XG-PD abnormal connection

8.4.3 Communication error with slave module

A.1 List of Flags

A.1.1 Special relays

| Device 1 | Device 2 | Type | Variable | Function | Description |
|----------|----------|-------|--------------------|--|---|
| F0000 | | DWORD | _SYS_STATE | Mode & Status | PLC mode & run status displayed. |
| | F00000 | BIT | _RUN | RUN | RUN status. |
| | F00001 | BIT | _STOP | STOP | STOP status. |
| | F00002 | BIT | _ERROR | ERROR | ERROR status. |
| | F00003 | BIT | _DEBUG | DEBUG | DEBUG status. |
| | F00004 | BIT | _LOCAL_CON | Local control | Local control mode. |
| | F00005 | BIT | _MODBUS_CO N | Modbus mode | Modbus control mode. |
| | F00006 | BIT | _REMOTE_CO N | Remote mode | Remote control mode. |
| | F00008 | BIT | _RUN_EDIT_ST | Modification during run | Program being downloaded during run. |
| | F00009 | BIT | _RUN_EDIT_C HK | Modification during run | Modification in progress during run. |
| | F0000A | BIT | _RUN_EDIT_D ONE | Modification complete during run | Modification complete during run. |
| | F0000B | BIT | _RUN_EDIT_E ND | Modification complete during run | Modification complete during run. |
| | F0000C | BIT | _CMOD_KEY | Run Mode | Run Mode changed by key. |
| | F0000D | BIT | _CMOD_LPADT | Run Mode | Run Mode changed by local PADT. |
| | F0000E | BIT | _CMOD_RPAD T | Run Mode | Run Mode changed by remote PADT. |
| | F0000F | BIT | _CMOD_RLINK | Run Mode | Run Mode changed by remote communication module. |
| | F00010 | BIT | _FORCE_IN | Compulsory input | Compulsory input status. |
| | F00011 | BIT | _FORCE_OUT | Compulsory output | Compulsory output status. |
| | F00012 | BIT | _SKIP_ON | I/O SKIP | I/O SKIP being executed. |
| | F00013 | BIT | _EMASK_ON | Error mask | Error mask being executed. |
| | F00014 | BIT | _MON_ON | Monitor | Monitor being executed. |
| | F00015 | BIT | _USTOP_ON | STOP | Stopped by STOP function |
| | F00016 | BIT | _ESTOP_ON | ESTOP | Stopped by ESTOP function. |
| | F00017 | BIT | _CONPILE_MO DE | Compiling | Compile being performed. |
| | F00018 | BIT | _INIT_RUN | Initializing | Initialization task being performed. |
| | F0001C | BIT | _PB1 | Program code 1 | Program code 1 selected. |
| | F0001D | BIT | _PB2 | Program code 2 | Program code 2 selected. |
| | F0001E | BIT | _CB1 | Compile code 1 | Compile code 1 selected. |
| | F0001F | BIT | _CB2 | Compile code 2 | Compile code 2 selected. |

Appendix

| Device 1 | Device 2 | Type | Variable | Function | Description |
|----------|----------|-------|----------------|--------------------------------|--|
| F0002 | | DWORD | _CNF_ER | System error | Serious error in system reported. |
| | F00020 | BIT | _CPU_ER | CPU error | CPU configuration error found. |
| | F00021 | BIT | _IO_TYER | Module type error | Module type is not identical. |
| | F00022 | BIT | _IO_DEER90 | Module installation error | Module is displaced. |
| | F00023 | BIT | _FUSE_ER | Fuse error | Fuse blown. |
| | F00024 | BIT | _IO_RWER | Module I/O error | Module I/O error found. |
| | F00025 | BIT | _IP_IFER | Module interface error | Error found in Special/communication module interface. |
| | F00026 | BIT | _ANNUM_ER | External equipment Error | Serious error detected in external equipment. |
| | F00028 | BIT | _BPRM_ER | Basic parameter | Basic parameter is abnormal. |
| | F00029 | BIT | _IOPRM_ER | IO parameter | IO configuration parameter abnormal. |
| | F0002A | BIT | _SPPRM_ER | Special module parameter | Special module parameter abnormal. |
| | F0002B | BIT | _CPPRM_ER | Communication module parameter | Communication module parameter abnormal. |
| | F0002C | BIT | _PGM_ER | Program error | Program error found. |
| | F0002D | BIT | _CODE_ER | Code error | Program code error found. |
| | F0002E | BIT | _SWDT_ER | System watch-dog | System watch-dog active. |
| | F0002F | BIT | _BASE_POWER_ER | Power error | Base power abnormal. |
| | F00030 | BIT | _WDT_ER | Scan watch-dog | Scan watch-dog active. |
| F0004 | | DWORD | _CNF_WAR | System warning | Slight error in system reported. |
| | F00040 | BIT | _RTC_ER | RTC error | RTC data abnormal. |
| | F00041 | BIT | _DBCK_ER | Back-up error | Data back-up error found. |
| | F00042 | BIT | _HBCK_ER | Restart error | Hot restart unavailable. |
| | F00043 | BIT | _ABSD_ER | Run error stop | Stopped due to abnormal run. |
| | F00044 | BIT | _TASK_ER | Task impact | Task being impacted. |
| | F00045 | BIT | _BAT_ER | Battery error | Battery status abnormal. |
| | F00046 | BIT | _ANNUM_WAR | External equipment error | Slight error detected in external equipment. |
| | F00047 | BIT | _LOG_FULL | Memory full | Log memory full |
| | F00048 | BIT | _HS_WAR1 | HS link 1 | HS link – parameter 1 error |
| | F00049 | BIT | _HS_WAR2 | HS link 2 | HS link – parameter 2 error |
| | F0004A | BIT | _HS_WAR3 | HS link 3 | HS link – parameter 3 error |
| | F0004B | BIT | _HS_WAR4 | HS link 4 | HS link – parameter 4 error |
| | F0004C | BIT | _HS_WAR5 | HS link 5 | HS link – parameter 5 error |
| | F0004D | BIT | _HS_WAR6 | HS link 6 | HS link – parameter 6 error |
| | F0004E | BIT | _HS_WAR7 | HS link 7 | HS link – parameter 7 error |
| | F0004F | BIT | _HS_WAR8 | HS link 8 | HS link – parameter 8 error |
| | F00050 | BIT | _HS_WAR9 | HS link 9 | HS link – parameter 9 error |

Appendix

| Device 1 | Device 2 | Type | Variable | Function | Description |
|----------|----------|------|--------------|----------------------|----------------------------------|
| | F00051 | BIT | _HS_WAR10 | HS link 10 | HS link – parameter 10 error |
| | F00052 | BIT | _HS_WAR11 | HS link 11 | HS link - parameter11 error |
| | F00053 | BIT | _HS_WAR12 | HS link 12 | HS link - parameter12 error |
| | F00054 | BIT | _P2P_WAR1 | P2P parameter 1 | P2P - parameter1 error |
| | F00055 | BIT | _P2P_WAR2 | P2P parameter 2 | P2P – parameter2 error |
| | F00056 | BIT | _P2P_WAR3 | P2P parameter 3 | P2P – parameter3 error |
| | F00057 | BIT | _P2P_WAR4 | P2P parameter 4 | P2P – parameter4 error |
| | F00058 | BIT | _P2P_WAR5 | P2P parameter 5 | P2P – parameter5 error |
| | F00059 | BIT | _P2P_WAR6 | P2P parameter 6 | P2P – parameter6 error |
| | F0005A | BIT | _P2P_WAR7 | P2P parameter 7 | P2P – parameter7 error |
| | F0005B | BIT | _P2P_WAR8 | P2P parameter 8 | P2P – parameter8 error |
| | F0005C | BIT | _CONSTANT_ER | Fixed cycle error | Fixed cycle error |
| F0009 | | WORD | _USER_F | User contact point | Timer available for user. |
| | F00090 | BIT | _T20MS | 20ms | CLOCK of 20ms cycle. |
| | F00091 | BIT | _T100MS | 100ms | CLOCK of 100ms cycle. |
| | F00092 | BIT | _T200MS | 200ms | CLOCK of 200ms cycle. |
| | F00093 | BIT | _T1S | 1s | CLOCK of 1s cycle. |
| | F00094 | BIT | _T2S | 2s | CLOCK of 2s cycle. |
| | F00095 | BIT | _T10S | 10s | CLOCK of 10s cycle. |
| | F00096 | BIT | _T20S | 20s | CLOCK of 20s cycle. |
| | F00097 | BIT | _T60S | 60s | CLOCK of 60s cycle. |
| | F00099 | BIT | _ON | Always ON | Bit always ON. |
| | F0009A | BIT | _OFF | Always OFF | Bit always OFF |
| | F0009B | BIT | _1ON | 1 scan ON | Bit only ON for the first scan. |
| | F0009C | BIT | _1OFF | 1 scan OFF | Bit only OFF for the first scan. |
| | F0009D | BIT | _STOG | Reverse | Every scan reversed. |
| F0010 | | WORD | _USER_CLK | User CLOCK | CLOCK available to set by user. |
| | F00100 | BIT | _USR_CLK0 | Repeat specific scan | ON/OFF CLOCK 0 for specific scan |
| | F00101 | BIT | _USR_CLK1 | Repeat specific scan | ON/OFF CLOCK 1 for specific scan |
| | F00102 | BIT | _USR_CLK2 | Repeat specific scan | ON/OFF CLOCK 2 for specific scan |
| | F00103 | BIT | _USR_CLK3 | Repeat specific scan | ON/OFF CLOCK 3 for specific scan |
| | F00104 | BIT | _USR_CLK4 | Repeat specific scan | ON/OFF CLOCK 4 for specific scan |
| | F00105 | BIT | _USR_CLK5 | Repeat specific scan | ON/OFF CLOCK 5 for specific scan |
| | F00106 | BIT | _USR_CLK6 | Repeat specific scan | ON/OFF CLOCK 6 for specific scan |
| | F00107 | BIT | _USR_CLK7 | Repeat specific scan | ON/OFF CLOCK 7 for specific scan |

Appendix

| Device 1 | Device 2 | Type | Variable | Function | Description |
|----------|----------|-------|---------------|-------------------------|---|
| F0011 | | WORD | _LOGIC_RESULT | Logic result | Logic result displayed. |
| | F00110 | BIT | _LER | Calculation error | ON for 1 scan if calculation in error. |
| | F00111 | BIT | _ZERO | Zero flag | ON if calculation result is 0. |
| | F00112 | BIT | _CARRY | Carry flag | ON if Carry found during calculation. |
| | F00113 | BIT | _ALL_OFF | Whole output OFF | ON if all output OFF |
| | F00115 | BIT | _LER_LATCH | Calculation error latch | ON kept if calculation in error. |
| F0012 | | WORD | _CMP_RESULT | Compared result | Compared result displayed. |
| | F00120 | BIT | _LT | LT flag | ON if "less than" |
| | F00121 | BIT | _LTE | LTE flag | ON if "less than or equal" |
| | F00122 | BIT | _EQU | EQU flag | ON if "equal" |
| | F00123 | BIT | _GT | GT flag | ON if "greater than" |
| | F00124 | BIT | _GTE | GTE flag | ON if "greater than or equal" |
| | F00125 | BIT | _NEQ | NEQ flag | ON if "not equal" |
| F0013 | | WORD | _AC_F_CNT | Inspected power cut | Number of inspected power-cuts displayed. |
| F0014 | | WORD | _FALS_NUM | FALS No. | FALS No. displayed. |
| F0015 | | WORD | _PUTGET_ERR0 | PUT/GET error 0 | Main base PUT / GET error |
| F0016 | | WORD | _PUTGET_ERR1 | PUT/GET error 1 | Added base step 1 PUT / GET error |
| F0017 | | WORD | _PUTGET_ERR2 | PUT/GET error 2 | Added base step 2 PUT / GET error |
| F0018 | | WORD | _PUTGET_ERR3 | PUT/GET error 3 | Added base step 3 PUT / GET error |
| F0019 | | WORD | _PUTGET_ERR4 | PUT/GET error 4 | Added base step 4 PUT / GET error |
| F0020 | | WORD | _PUTGET_ERR5 | PUT/GET error 5 | Added base step 5 PUT / GET error |
| F0021 | | WORD | _PUTGET_ERR6 | PUT/GET error 6 | Added base step 6 PUT / GET error |
| F0022 | | WORD | _PUTGET_ERR7 | PUT/GET error 7 | Added base step 7 PUT / GET error |
| F0023 | | WORD | _PUTGET_NDR0 | PUT/GET complete 0 | Main base PUT / GET complete |
| F0024 | | WORD | _PUTGET_NDR1 | PUT/GET complete 1 | Added base step 1 PUT / GET complete |
| F0025 | | WORD | _PUTGET_NDR2 | PUT/GET complete 2 | Added base step 2 PUT / GET complete |
| F0026 | | WORD | _PUTGET_NDR3 | PUT/GET complete 3 | Added base step 3 PUT / GET complete |
| F0027 | | WORD | _PUTGET_NDR4 | PUT/GET complete 4 | Added base step 4 PUT / GET complete |
| F0028 | | WORD | _PUTGET_NDR5 | PUT/GET complete 5 | Added base step 5 PUT / GET complete |
| F0029 | | WORD | _PUTGET_NDR6 | PUT/GET complete 6 | Added base step 6 PUT / GET complete |
| F0030 | | WORD | _PUTGET_NDR7 | PUT/GET complete 7 | Added base step 7 PUT / GET complete |
| F0044 | | WORD | _CPU_TYPE | CPU type | Information on CPU type displayed. |
| F0045 | | WORD | _CPU_VER | CPU version | CPU version displayed. |
| F0046 | | DWORD | _OS_VER | OS version | OS version displayed. |
| F0048 | | DWORD | _OS_DATE | OS date | OS released date displayed. |

Appendix

| Device 1 | Device 2 | Type | Variable | Function | Description |
|----------|----------|-------|-----------------|---------------------------|--|
| F0050 | | WORD | _SCAN_MAX | Max. scan time | Max. scan time displayed |
| F0051 | | WORD | _SCAN_MIN | Min. scan time | Min. scan time displayed |
| F0052 | | WORD | _SCAN_CUR | Present scan time | Present scan time displayed. |
| F0053 | | WORD | _MON_YEAR | Month / Year | PLC's time information (Month/Year) |
| F0054 | | WORD | _TIME_DAY | Hour / Date | PLC's time information (Hour/Date) |
| F0055 | | WORD | _SEC_MIN | Second / Minute | PLC's time information (Second/Minute) |
| F0056 | | WORD | _HUND_WK | 100 years / Day | PLC's time information (100 years/Day) |
| F0057 | | WORD | _FPU_INFO | FPU calculation result | Floating decimal calculation result displayed. |
| | F00570 | BIT | _FPU_LFLAG_I | Incorrect error latch | Latched if in incorrect error. |
| | F00571 | BIT | _FPU_LFLAG_U | Underflow latch | Latched if underflow found. |
| | F00572 | BIT | _FPU_LFLAG_O | Overflow latch | Latched if overflow found. |
| | F00573 | BIT | _FPU_LFLAG_Z | Latch divided by 0 | Latched if divided by 0. |
| | F00574 | BIT | _FPU_LFLAG_V | Invalid calculation latch | Latched if invalid calculation. |
| | F0057A | BIT | _FPU_FLAG_I | Incorrect error | Reported if incorrect error found. |
| | F0057B | BIT | _FPU_FLAG_U | Underflow | Reported if underflow found. |
| | F0057C | BIT | _FPU_FLAG_O | Overflow | Reported if overflow found. |
| | F0057D | BIT | _FPU_FLAG_Z | Division by 0 | Reported if divided by 0. |
| | F0057E | BIT | _FPU_FLAG_V | Invalid calculation | Reported if calculation invalid. |
| | F0057F | BIT | _FPU_FLAG_E | Irregular value input | Reported if irregular value input. |
| F0058 | | DWORD | _ERR_STEP | Error step | Error step saved. |
| F0060 | | DWORD | _REF_COUNT | Refresh | Increased when module refresh executed. |
| F0062 | | DWORD | _REF_OK_CNT | Refresh OK | Increased if module refresh normal |
| F0064 | | DWORD | _REF_NG_CNT | Refresh NG | Increased if module refresh abnormal. |
| F0066 | | DWORD | _REF_LIM_CNT | Refresh LIMIT | Increased if module refresh abnormal (TIME OUT). |
| F0068 | | DWORD | _REF_ERR_CNT | Refresh ERROR | Increased if module refresh abnormal. |
| F0070 | | DWORD | _MOD_RD_ERR_CNT | Module READ ERROR | Increased if module reads 1 word abnormally. |
| F0072 | | DWORD | _MOD_WR_ERR_CNT | Module WRITE ERROR | Increased if module writes 1 word abnormally. |
| F0074 | | DWORD | _CA_CNT | Block service | Increased if module's block data serviced |
| F0076 | | DWORD | _CA_LIM_CNT | Block service LIMIT | Increased if module's block data service abnormal. |
| F0078 | | DWORD | _CA_ERR_CNT | Block service ERROR | Increased if module's block data service abnormal. |
| F0080 | | DWORD | _BUF_FULL_CNT | Buffer FULL | Increased if CPU's internal buffer is FULL. |
| F0082 | | DWORD | _PUT_CNT | PUT count | Increased if PUT executed. |
| F0084 | | DWORD | _GET_CNT | GET count | Increased if GET executed. |
| F0086 | | DWORD | _KEY | Present key | Local key's present status displayed. |
| F0088 | | DWORD | _KEY_PREV | Previous key | Local key's previous status displayed. |

Appendix

| Device 1 | Device 2 | Type | Variable | Function | Description |
|----------|----------|------|------------|-----------------------------|---|
| F0090 | | WORD | _IO_TYER_N | Discordant slot | Slot number with discordant module type displayed. |
| F0091 | | WORD | _IO_DEER_N | Displaced slot | Slot number with displaced module displayed. |
| F0092 | | WORD | _FUSE_ER_N | Fuse blown slot | Slot number with fuse blown displayed. |
| F0093 | | WORD | _IO_RWER_N | RW error slot | Slot number with module Read/Write error displayed. |
| F0094 | | WORD | _IP_IFER_N | IF error slot | Slot number with module interface error displayed. |
| F0096 | | WORD | _IO_TYER0 | Module type 0 error | Main base module type error. |
| F0097 | | WORD | _IO_TYER1 | Module type 1 error | Added base step 1 module type error. |
| F0098 | | WORD | _IO_TYER2 | Module type 2 error | Added base step 2 module type error. |
| F0099 | | WORD | _IO_TYER3 | Module type 3 error | Added base step 3 module type error. |
| F0100 | | WORD | _IO_TYER4 | Module type 4 error | Added base step 4 module type error. |
| F0101 | | WORD | _IO_TYER5 | Module type 5 error | Added base step 5 module type error |
| F0102 | | WORD | _IO_TYER6 | Module type 6 error | Added base step 6 module type error |
| F0103 | | WORD | _IO_TYER7 | Module type 7 error | Added base step 7 module type error |
| F0104 | | WORD | _IO_DEER0 | Module installation 0 error | Main base module installation error |
| F0105 | | WORD | _IO_DEER1 | Module installation 1 error | Added base step 1 module installation error |
| F0106 | | WORD | _IO_DEER2 | Module installation 2 error | Added base step 2 module installation error |
| F0107 | | WORD | _IO_DEER3 | Module installation 3 error | Added base step 3 module installation error |
| F0108 | | WORD | _IO_DEER4 | Module installation 4 error | Added base step 4 module installation error |
| F0109 | | WORD | _IO_DEER5 | Module installation 5 error | Added base step 5 module installation error |
| F0110 | | WORD | _IO_DEER6 | Module installation 6 error | Added base step 6 module installation error |
| F0111 | | WORD | _IO_DEER7 | Module installation 7 error | Added base step 7 module installation error |
| F0112 | | WORD | _FUSE_ER0 | Fuse blown 0 error | Main base Fuse blown error |
| F0113 | | WORD | _FUSE_ER1 | Fuse blown 1 error | Added base step 1 Fuse blown error |
| F0114 | | WORD | _FUSE_ER2 | Fuse blown 2 error | Added base step 2 Fuse blown error |
| F0115 | | WORD | _FUSE_ER3 | Fuse blown 3 error | Added base step 3 Fuse blown error |
| F0116 | | WORD | _FUSE_ER4 | Fuse blown 4 error | Added base step 4 Fuse blown error |
| F0117 | | WORD | _FUSE_ER5 | Fuse blown 5 error | Added base step 5 Fuse blown error |
| F0118 | | WORD | _FUSE_ER6 | Fuse blown 6 error | Added base step 6 Fuse blown error |
| F0119 | | WORD | _FUSE_ER7 | Fuse blown 7 error | Added base step 7 Fuse blown error |
| F0120 | | WORD | _IO_RWER0 | Module RW 0 error | Main base module Read/Write error |
| F0121 | | WORD | _IO_RWER1 | Module RW 1 error | Added base step 1 module Read/Write error |
| F0122 | | WORD | _IO_RWER2 | Module RW 2 error | Added base step 2 module Read/Write error |
| F0123 | | WORD | _IO_RWER3 | Module RW 3 error | Added base step 3 module Read/Write error |
| F0124 | | WORD | _IO_RWER4 | Module RW 4 error | Added base step 4 module Read/Write error |
| F0125 | | WORD | _IO_RWER5 | Module RW 5 error | Added base step 5 module Read/Write error |
| F0126 | | WORD | _IO_RWER6 | Module RW 6 error | Added base step 6 module Read/Write error |

Appendix

| Device 1 | Device 2 | Type | Variable | Function | Description |
|----------|----------|-------|--------------------|-------------------------------|---|
| F0127 | | WORD | _IO_RWER7 | Module RW 7 error | Added base step 7 module Read/Write error |
| F0128 | | WORD | _IO_IFER_0 | Module IF 0 error | Main base module interface error |
| F0129 | | WORD | _IO_IFER_1 | Module IF 1 error | Added base step 1 module interface error |
| F0130 | | WORD | _IO_IFER_2 | Module IF 2 error | Added base step 2 module interface error |
| F0131 | | WORD | _IO_IFER_3 | Module IF 3 error | Added base step 3 module interface error |
| F0132 | | WORD | _IO_IFER_4 | Module IF 4 error | Added base step 4 module interface error |
| F0133 | | WORD | _IO_IFER_5 | Module IF 5 error | Added base step 5 module interface error |
| F0134 | | WORD | _IO_IFER_6 | Module IF 6 error | Added base step 6 module interface error |
| F0135 | | WORD | _IO_IFER_7 | Module IF 7 error | Added base step 7 module interface error |
| F0136 | | WORD | _RTC_DATE | RTC date | RTC's present date |
| F0137 | | WORD | _RTC_WEEK | RTC day | RTC's present day of the week |
| F0138 | | DWORD | _RTC_TOD | RTC time | RTC's present time (ms unit) |
| F0140 | | DWORD | _AC_FAIL_CNT | Power-cut times | Power-cut times saved. |
| F0142 | | DWORD | _ERR_HIS_CNT | Errors found | Number of found errors saved. |
| F0144 | | DWORD | _MOD_HIS_CNT | Mode conversion times | Mode conversion times saved. |
| F0146 | | DWORD | _SYS_HIS_CNT | History updated times | System's history updated times saved. |
| F0148 | | DWORD | _LOG_ROTATE | Log rotate | Log rotate information saved. |
| F0150 | | WORD | _BASE_INFO0 | Slot information 0 | Main base slot information |
| F0151 | | WORD | _BASE_INFO1 | Slot information 1 | Added base step 1 slot information |
| F0152 | | WORD | _BASE_INFO2 | Slot information 2 | Added base step 2 slot information |
| F0153 | | WORD | _BASE_INFO3 | Slot information 3 | Added base step 3 slot information |
| F0154 | | WORD | _BASE_INFO4 | Slot information 4 | Added base step 4 slot information |
| F0155 | | WORD | _BASE_INFO5 | Slot information 5 | Added base step 5 slot information |
| F0156 | | WORD | _BASE_INFO6 | Slot information 6 | Added base step 6 slot information |
| F0157 | | WORD | _BASE_INFO7 | Slot information 7 | Added base step 7 slot information |
| F0158 | | WORD | _RBANK_NUM | Used block number | Presently used block number |
| F0159 | | WORD | _RBLOCK_STATUS | Flash status | Flash block status |
| F0160 | | DWORD | _RBLOCK_READ_FLAG | Flash Read | ON when reading Flash N block data. |
| F0162 | | DWORD | _RBLOCK_WRITE_FLAG | Flash Write | ON when writing Flash N block data. |
| F0164 | | DWORD | _RBLOCK_ERROR_FLAG | Flash error | Error found during Flash N block service. |
| F1024 | | WORD | _USER_WRITE_F | Available contact | Contact point available in program |
| | F10240 | BIT | _RTC_WR | RTC RW | Data Write & Read in RTC |
| | F10241 | BIT | _SCAN_WR | Scan WR | Scan value initialization |
| | F10242 | BIT | _CHK_ANC_ERROR | Detect external serious error | Detection of serious error in external equipment requested. |
| | F10243 | BIT | _CHK_ANC_WARNING | Detect external slight error | Detection of slight error in external equipment requested. |

Appendix

| Device 1 | Device 2 | Type | Variable | Function | Description |
|----------|----------|------|---------------|------------------------------------|--|
| F1025 | | WORD | _USER_STAUS_F | User contact point | User contact point |
| | F10250 | BIT | _INIT_DONE | Initialization complete | Initialization complete displayed. |
| F1026 | | WORD | _ANC_ERR | External serious error information | Serious error information in external equipment displayed. |

Appendix

A.1.2 Special register for data link

[Table 1] List of communication flags based on HS link No.

HS link No. 1 ~ 12

| No. | Keyword | Type | Detail | Description |
|-------------------------|------------------------------|-----------|--|---|
| L000000 | _HS1_RLINK | Bit | HS link parameter No.1's all stations normally operated | Displays all stations normally operated as specified in HS link parameter, which will be On if 1. There is no RUN mode error in all stations specified in parameter 2. All data block is in normal communication as specified in parameter. 3. The parameter specified in each station itself is in normal communication. Run_link will be kept On if once On until stopped by link disable. |
| L000001 | _HS1_LTRBL | Bit | After _HS1RLINK is ON, abnormal status displayed | This flag will be On if the station specified in parameter and the data block's communication status are as described below with _HSmRLINK flag On., 1. When the station specified in parameter is not in RUN mode, 2. When the station specified in parameter is in error, 3. When data block's communication status specified in parameter is unstable, The link trouble will be On if one of those conditions 1,2 and 3 Above occurs. And if such a condition is back to normal, it will be Off. |
| L000020 ~ L00009F | _HS1_STATE[k] (k=000~127) | Bit Array | HS link parameter No.1, Block No.k's general status displayed | Displays the general status of the communication information for the specified parameter's respective data blocks. HS1STATE[k]=HS1MOD[k]&_HS1TRX[k]&(~_HSmERR[k]) |
| L000100 ~ L00017F | _HS1_MOD[k] (k=000~127) | Bit Array | HS link parameter No.1, Block No.k station's Run operation mode | Displays the operation mode of the station specified in parameter's data block k. |
| L000180 ~ L00025F | _HS1_TRX[k] (k=000~127) | Bit Array | Normal communication displayed with HS link parameter No.1, Block No.k station | Displays the communication status of parameter's data block k to check if normal as specified. |
| L000260 ~ L00033F | _HS1_ERR[k] (k=000~127) | Bit Array | HS link parameter No.1, Block No.k station's Run error mode | Displays the communication status of parameter's data block k to check for any error. |
| L000340 ~ L00041F | _HS1_SETBLOCK [k] | Bit Array | HS link parameter No.1, Block No.k setting displayed | Displays the setting status of parameter's data block k. |

* In the case of Dnet and Pnet, Block No.k stands for the station No. of the slave (in other words, it is station No.k).

Remark

| HS link No. | L area address | Remarks |
|-------------|-----------------|--|
| 2 | L000500~L00099F | Compared with HS link of 1 in [Table 1], other HS link station number's flag address will be simply calculated as follows; * Calculation formula: L area address = L000000 + 500 x (HS link No. – 1) |
| 3 | L001000~L00149F | |
| 4 | L001500~L00199F | |
| 5 | L002000~L00249F | |
| 6 | L002500~L00299F | |
| 7 | L003000~L00349F | In order to use HS link flag for program and monitoring, use the flag map registered in XG5000 for convenient application.. |
| 8 | L003500~L00399F | |
| 9 | L004000~L00449F | |
| 10 | L004500~L00499F | |
| 11 | L005000~L00549F | |

K as a block number is displayed through 8 words by 16 for 1 word for the information of 128 blocks from 000 to 127.

For example, block information of 16~31, 32~47, 48~63, 64~79, 80~95, 96~111, 112~127 will be displayed in L00011, L00012, L00013, L00014, L00015, L00016, L00017 from block 0 to block 15 for mode information (_HS1MOD). Thus, the mode information of the block No. 55 will be displayed in L000137.

A.2 Terminology

General terms of DeviceNet I/F module are as described below for the suitable application of the product. Refer to DeviceNet specification for more details.

1) Fieldbus

Electric system to transmit small quantity of data between automatic devices fast and reliably so to execute a given task thoroughly.

2) Master Module

A module to send/receive and control data.

3) Slave Module

A module to respond to the data sent from the master module.

4) CAN (Controller Area Network) Protocol

Communication protocol designed compatible with dedicated automobile communication. CAN technology has been adopted in the device network. CAN is divided into 11-bit Identifier Field and Data Field which can transmit up to 8 bytes.

| | | | |
|------------------|-----|-------------|------|
| Identifier Field | RTR | Data Length | Data |
|------------------|-----|-------------|------|

- Identifier Field : Area to set address (composed of 11 bits)

- Data : Field composed of actual data (up to 8 bytes can be transmitted)

5) Bus-Off

It produces an applicable error to abnormal network power.

6) ODVA (Open DeviceNet Vendor Association)

An association established to propagate DeviceNet communication widely.

7) Connection

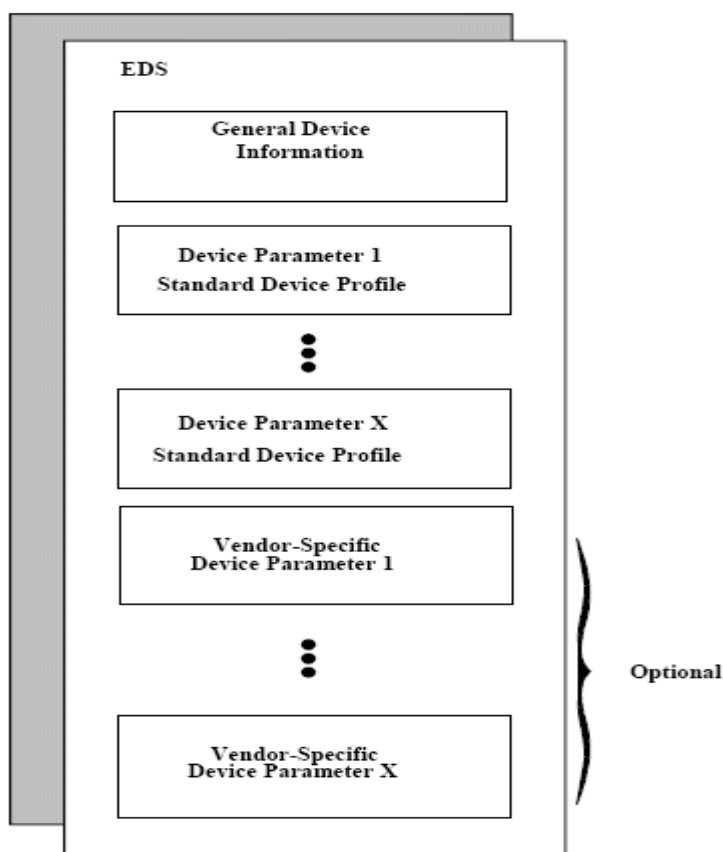

As logic connection between master and slave which are connected through DeviceNet, it is used to keep and control all kinds of communication.

8) DeviceNet station No. (DeviceNet MAC ID)

Station No. of the communication module which has adopted DeviceNet standard. XGL_DMEA is specified through SyCon, and generally the station No. used for DeviceNet module is set by means of the switch installed on the front of the communication module. And this station No. is used as the station No. for all the services including HS link service.

9) Profile

It provides information on the device configuration data. (Printed data sheet, EDS; Electronic Data Sheet, etc.) It is named EDS in DeviceNet. It contains attributes of device and object address information of parameter. EDS's constitution is as shown below.

10) Packet

A data packet which is the basic unit used to transmit data through the network. With the header (Message identifier) attached in front, information on destination of the packet and other information necessary are added thereto.

11) CRC (Cyclic Redundancy Check)

As one of the error detection methods mostly used for synchronous transmission, it is also called as patrol signed type. CRC field of CAN protocol is displayed in 15-bit CRC and 'r' bit, composed of 1-bit CRC delimiter. If Rx node receives data frame, it deletes stuffing bits first and then checks for errors from SOF to data field through CRC. Since 15-bits CRC is suitable for the frame with bit counts less than 127 bits and CAN is of the max. 108-bit frame, it is appropriate to check for errors. If CRC divides transmitted value by multinomial expression created when transmitting and sends the value together attached to the back of message, the Rx side will divide the received data by the identical multinomial expression. And if the remainder is 'zero', it is regarded as No Error identified in this method.

12) Terminating resistance

Resistance used to adjust mutual impedance between Tx and Rx sides on the Physical Layer. Terminating resistance of DeviceNet is 121Ω, 1/4 W, 1% .

13) High-speed Link

A communication type used only between DeviceNet communication modules for the user to send/receive data at high speed, which execute communication with HS link parameters setting of XG-PD.

14) XG-PD (PLC Programming And Debugging Tool)

Software used for programming, downloading, run, stop, debugging applicably to PLC CPU module, where a diagnosis function is included to check the status of respective communication modules.

15) SyCon (System Configuration Tool)

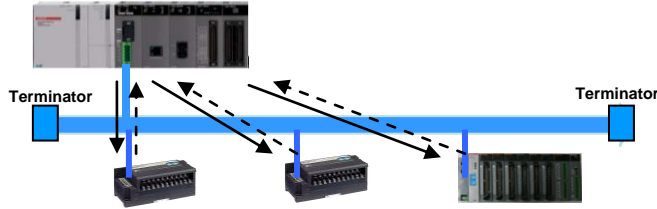

Software used for system configuration through DeviceNet, where basic DeviceNet parameters can be set for master module and slave module, and setting details can be monitored through XG-PD as well.

16) Communication Type

4 types of DeviceNet communication are available (Poll, Bit-Strobe, COS and Cyclic). The communication types provided by respective slaves (remote I/O) may be different as such. DeviceNet can use the 4 communication types as mixed in a single network.

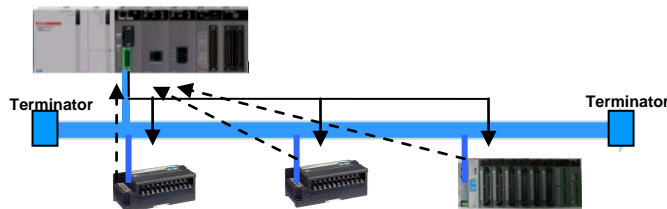

17) Poll

Master executes monitoring and data Tx/Rx for the respective slaves whenever scanned.

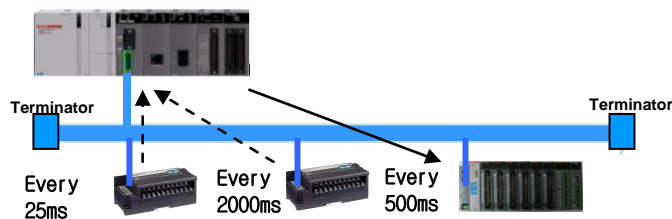

18) Bit Strobe

Master sends 1-bit output signal to respective slaves. Each slave which receives the output sign operates as specified. With data Tx/Rx minimized between master and slaves, the speed of the whole scan can be increased.

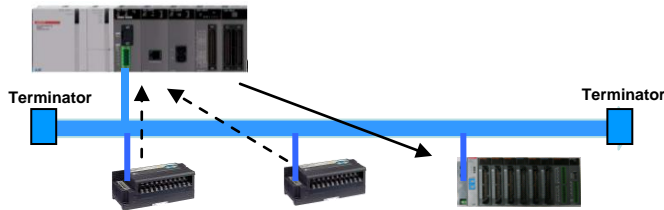

19) Cyclic

The slave set to cyclic sends the data of one time to the master for every cycle (max. 65535mS) specified.

20) COS (Change of State)

If any change occurs in the status of respective slaves, communication will be executed with the master. It is effective only for the slave monitoring the objects whose distance of status change is long. Data will be also sent to the master even if there is no change in the status with the max. COS distance of 65535ms specified in the slave.

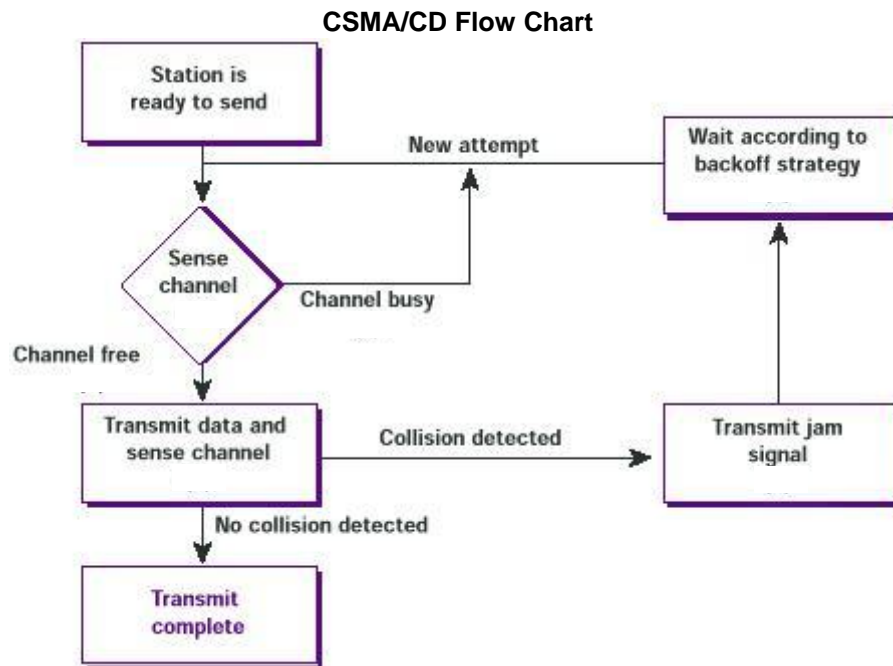

21) MAC ID (Media Access Control Identifier)

Node Address on the DeviceNet network is defined as MAC ID, which uses 6 bits among 11 bits of CAN Identifier Field. MAC ID range of DeviceNet is available up to 0 ~ 63.

22) CSMA/CD (Carrier Sense Multiple Access with Collision Detection)

Ethernet is of the structure configured to send the data after a client to send data checks if other computer in the network is being communicated and then no sign is found to be sent. If any collision occurs between data sent from various nodes at a time, CSMA/CD which monitors such a collision will keep the data for a specific time and then resend the sign to control the communication. For example, if a node is to use the network, cable status of the network will be checked first. At this time there will be no problem if any other node is not to use the network and there is no data in the cable, which allows normal execution free of any problem. However, if the network is tried to be used when other node is already using the network, there will be a collision in the cable. Once such a collision occurs, wait for the first node to complete the use and then retry after a while. The time necessary to wait after a collision occurs is mostly decided by the timer installed on the node. The time for respective nodes to wait shall be different from each other so to keep from another collision, which can be resolved with the time adjustment fixed inside the node, or by means of principal of random numbers applied. Use CSMA/CD to reduce the band width which is wasted during transmission of collided packets. CSMA/CD is as follows;

| Access method | Description |
|--------------------------|--|
| CS (Carrier Sense) | Checks the network if being used. |
| MA (Multiple Access) | Available for any user if the network is empty. |
| CD (Collision Detection) | Checks for any collision while sending messages. |

23) CSMA/NBA (Carrier Sense Multiple Access with Non-destructive Bitwise Arbitration)

Data Tx mechanism of CAN is similar to IEEE 802.3 CSMA/CD protocol. In other words, respective nodes check the status of the bus previously to sending the data, and then send the ready message if the bus is inactive. In CSMA/CD if two or more nodes send the messages at a time, the message will be collided and all lost. However, in CAN the message to be sent has 11-bit identifier allowing the message of high priority to be sent first. In other words, if two or more nodes send the messages at a time, the message of the highest priority (that is, the message with the lowest identifier value) will be sent while transmission of other messages of lower priority is stopped after identifiers are compared with each other bit by bit. As for the bus, '0' bit is superior to '1' bit. In other words, '0' bit is called as 'dominant' ('d' bit) and '1' as 'recessive' ('r' bit). Tx node monitors the bus whenever sending a bit. If a node sends 'r' bit and the monitoring result of the bus is 'd' bit, it means other node in the bus is sending the message of higher priority, thus the node will promptly stop transmitting the message to convert to Rx mode. The node which stops transmitting will monitor the status of the bus and then restart to transmit the message automatically if the bus is back to inactive status.

24) Reset

Communication module is initialized when error is occurred. It is executed [Online] – [Reset] menu in XG-PD. PLC is restarted.

25) Expected Packet Rate

Transmission value from slave module for I/O data exchange of master module

- a) Cyclic communication : Slave update the data by this setting value.
- b) COS communication : Slave can set the time of Watchdog timeout through this setting value.

26) Production inhibit time

Minimum delay time for updating of new data. It is not updated during this production inhibit time.

27) Fragmented Timeout

If I/O data is 8 bytes more than, master module wait until slave module give response within fragmented timeout setting.

A.3 Smart I/O Mode Setting in SyCon

Our company's slave module Smart I/O has built-in mode as shown below.

- 1) Standard mode
- 2) Quick start mode
- 3) Dummy mode

Each mode's characteristic is as shown below.

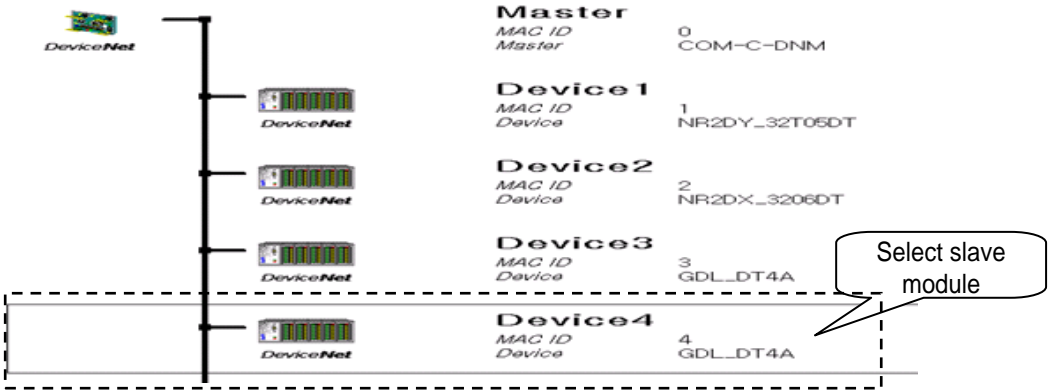

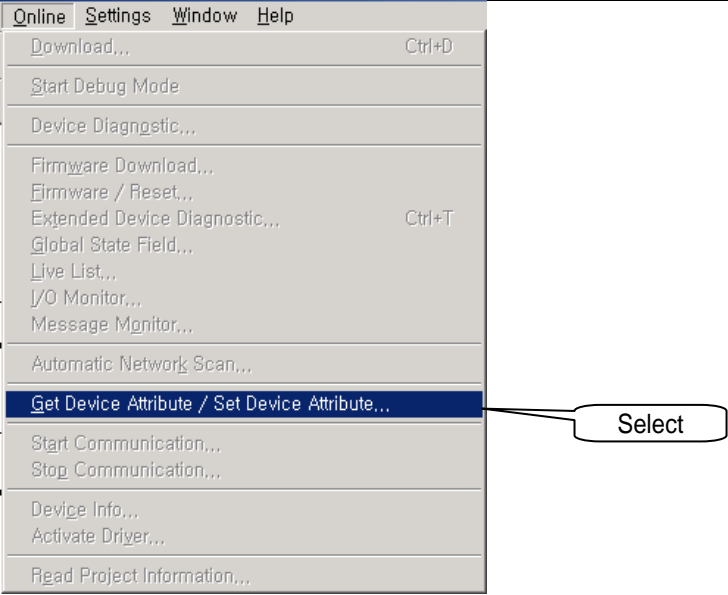

| Mode type | Description |
|------------------|--|
| Standard mode | <ul style="list-style-type: none">▶ After powered on master and slave model.- It takes 5~6 second to start the communication.- Default setting |
| Quick start mode | <ul style="list-style-type: none">▶ If master and slave module support the Quick start mode function, it takes 1.5 second to start the communication.▶ If only slave module supports the Quick start mode function, it takes 3~4 second to start the communication. <p>(Setting address: Class-3, Instance-1, Attribute-10)</p> |
| Dummy mode | <ul style="list-style-type: none">▶ It makes a 1 word data size of slave input module additionally.- It can't write the data. <p>(Setting address: Class-3, Instance-1, Attribute-40)</p> |

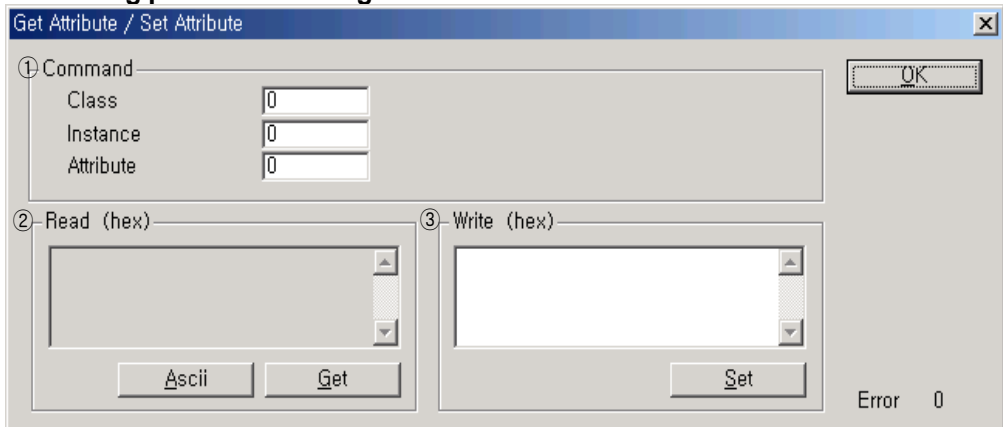

Appendix

Mode setting is as shown below.

1) Mode setting

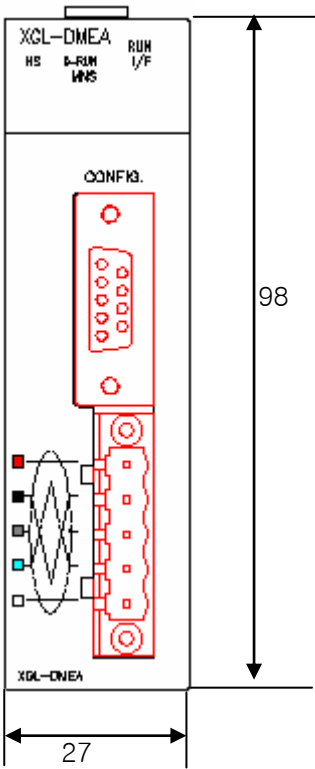

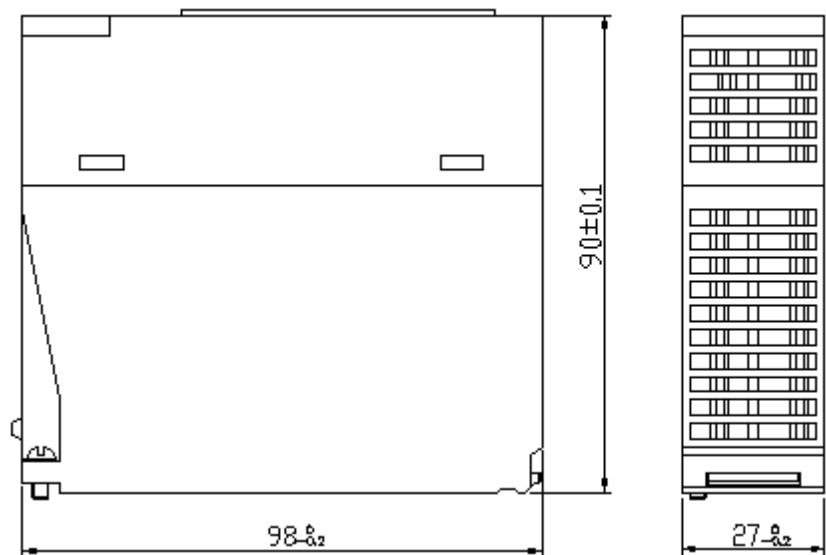

Select slave module to edit in editing window. Setting is available at menu bar.

| Phase | Description | | | | | | |
|----------------------|--|------|-------------|----------------------|--|----------------------|---|
| 1 | Execute 5) Master setting's 8 phase in 'Chapter 5 SyCon Setting'. | | | | | | |
| 2 | <p>Select slave to edit.</p>  | | | | | | |
| 3 | <p>Mode setting: 1) <u>Online</u> → <u>Get Device Attribute/Set Device Attribute</u></p>  <table border="1"> <thead> <tr> <th>Menu</th><th>Description</th></tr> </thead> <tbody> <tr> <td>Get Device Attribute</td><td>It reads the mode's information from slave module. - It is displayed Hexadecimal. (If click the ASCII button, it is displayed ASCII type.)</td></tr> <tr> <td>Set Device Attribute</td><td>It writes the mode's information from slave module. - It is displayed Hexadecimal.</td></tr> </tbody> </table> | Menu | Description | Get Device Attribute | It reads the mode's information from slave module. - It is displayed Hexadecimal. (If click the ASCII button, it is displayed ASCII type.) | Set Device Attribute | It writes the mode's information from slave module. - It is displayed Hexadecimal. |
| Menu | Description | | | | | | |
| Get Device Attribute | It reads the mode's information from slave module. - It is displayed Hexadecimal. (If click the ASCII button, it is displayed ASCII type.) | | | | | | |
| Set Device Attribute | It writes the mode's information from slave module. - It is displayed Hexadecimal. | | | | | | |

| Phase | Description | | | | | | | | | | | | | | | | | | | | | | | | | | | |

Click Set.</p> <p>After the all settings, [OK] button closes the setting window. Turn off the slave module's power, setting value is applied after turn on the salve module.</p> | | | | | | | | | | | | | | | | | | | | | | | | | | | |

A.4 External Dimensions

Unit: mm

Warranty

- 1. Terms of warranty
LSIS provides an 18-month warranty starting from the date of production.
- 2. Range of warranty
For problems within the terms of the warranty, LSIS will replace the entire PLC or repair the defective parts free of charge except for the following cases.
 - (1) Problems caused by improper conditions, environment or treatment.
 - (2) Problems caused by external devices.
 - (3) Problems caused by the user remodeling or repairing the PLC.
 - (4) Problems caused by improper use of the product.
 - (5) Problems caused by circumstances where the expectations exceed that of the science and technology level when LSIS produced the product.
 - (6) Problems caused by natural disaster.
- 3. This warranty is limited to the PLC itself only. It is not valid for the system which the PLC is attached to.

Environmental Policy

LSIS Co., Ltd supports and observes the environmental policy as below.

Environmental Management

LSIS considers the environmental preservation as the preferential management subject and every staff of LSIS use the reasonable endeavors for the pleasurable environmental preservation of the earth.

About Disposal

LSIS' PLC unit is designed to protect the environment. For the disposal, separate aluminum, iron and synthetic resin (cover) from the product as they are reusable.

LSIS values every single customers.

Quality and service come first at LSIS.

Always at your service, standing for our customers.
